ABSTRACT FORM FOR ALL GSA MEETINGS IN 1995

Complete all sections ① through ⑨ below.

1 TYPE ABSTRACT COMPLETELY WITHIN THE BLUE LINES BELOW. (10 point type minimum)

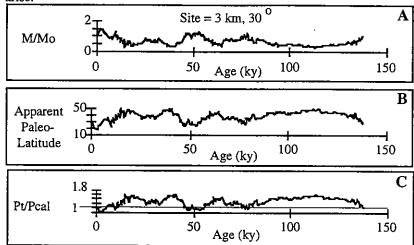

Nº 5891

First Geomagnetic-Based, In Situ Produced Cosmogenic Isotope Calibration Program.

CLAPP, Erik, and BIERMAN, Paul, Univ. of Vermont, Geology Dept., Burlington, VT, 05405. We have developed a Macintosh-based computer program for the interpretation of in situ produced cosmogenic isotopes. Driven by a choice of widely accepted geomagnetic paleointensity records (Bard et al., 1990; Mazaud et al., 1991; McElhinny and Senanayake, 1982; Meynadier et al., 1992; and Weeks et al., 1995), the program represents geomagnetic-field strength changes as apparent geomagnetic latitudes by using the formulation of Nishiizumi et al. (1989). An instantaneous, in situ production rate (Pt) is then determined for a specific sampling site using the altitude/latitude corrections of Lal (1991). The program can ultimately be used to determine calibrated exposure ages or denudation rates of bedrock and sediment surfaces.

Output from the program displays an inverse relationship between geomagnetic field strength (A) and apparent paleolatitude (B). This inverse relationship results in higher than current instantaneous production rates through much of the Late Pleistocene (C). As a result, if short-term (10-15 ky) calibrations are used to calculate exposure ages over the past 100 ky substantial errors

(>10%) could arise.

Our program facilitates the interpretation of measured, in situ produced, cosmogenic isotope data. By choosing a geomagnetic paleointensity record, and inputting the latitude and altitude of the sample site as well as the assumed calibration age, the program will output instantaneous and integrated production rates, calibrated exposure ages and calibrated denudation rates. This program will be available for demonstration.

INVITED-SYMPOSIUM ABSTRACTS: Send directly to your convener by deadline on invitation.

ALL OTHER ABSTRACTS (DISCIPLINE & THEME): Send to the appropriate

(see address box) to arrive before the deadline shown.

Abstracts may NOT be faxed.
