

The Living/Learning Center Speaker Series presents...

# **Time-Lapse Photography:** **Watch plants do amazing things!**

Unlike animals, plants are not able to relocate themselves if they happen to start growing in unfavorable places. However, many plants can move so that they can grow in more favorable conditions. Unfortunately, these plant movements are on a time scale that is too slow for us to observe in real time. To overcome this challenge, we have used time-lapse photography techniques to successfully observe the plant movements. This presentation will also demonstrate some interesting aspects about plant physiology.

**Thursday, April 14**  
**8:00 p.m, 315 Commons L/L**  
Presented by William Igoe  
L/L Plants that Move Program
