Reactive Oxygen Species (ROS) detection by flow cytometry.- Murine T cells were activated (blue line) or not (red line). Cells were incubated with (1 µM) 2',7’-cichlorodihydrofluorescein diacetate (H₂DCFDA, LifeTech/Molecular Probes®) during 30 min/37°C/5% CO₂, washed, and analyzed by flow cytometry (488 nm laser, 530/30 Bandpass).
