

VFWD Riparian Area Programs & Funding

Will Eldridge
Aquatic Habitat Biologist, VFWD
Riparian Workshop
March 9, 2021

VFWD Watershed Grants

Grant funds are available for water-related projects that:

- Protect or restore fish and wildlife habitats
- Protect or restore water quality, and shorelines;
 Reduce phosphorus loading and/or sedimentation as part of <u>DEC's Clean Water</u> Initiative objectives;

- •Enhance recreational use and enjoyment;
 •Identify and protect historic and cultural resources;
 •Educate people about watershed resources; or
 •Monitor fish and wildlife populations and/or water quality.

Education \$5,000 limit

Planning \$3,500 limit

Implementation \$10,000 limit

Deadline: February 5, 2021

https://dec.vermont.gov/water-investment/cwi/grants/co-opportunities#Watershed

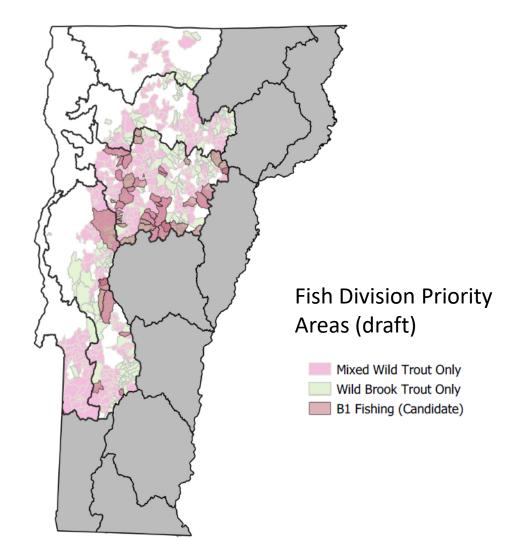

Wetland Acquisition & Restoration Funding

- Fee acquisition by VFWD of converted land that can be hydrologically restored
- Hydrologic and natural community restoration
- Fish Division priority areas:
 - Headwaters that support trout
- Lake Champlain Only
- Partners can help with outreach to landowners

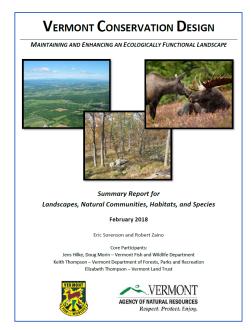

Community Wildlife Program

- Offers <u>FREE</u> services to municipalities and NGOs
- Town planning & zoning
- Data collection and interpretation
- Regulatory and non-regulatory tools
- Connect municipalities with partners

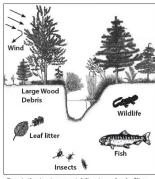

Fish Grow on Trees

Update coming in 2021

What is a Riparian Area?

Riparian areas are the areas bordering streams, lakes and wetlands that link the land and the water. The riparian area generally consists of trees and shrubs that extend at least 100 feet from the shoreline.

Trees in the riparian area stabilize stream banks, filter runoff, provide cover for wildlife, and improve aquatic habitat by adding nutrients and food for insects through lacf litter and cover habitat for fish through woody debris. (Illustration courtesy of the Government of British Columbia)

Why are Riparian Areas Important?

Rivers are dynamic – they naturally flood, change course, and erode their banks. A healthy riparian area acts as a buffer to changes in weather, temperature, flooding and pollution. They are resilient to extreme events, which is critical to reducing flood damage and enhancing fish and wildlife survival.

Fish Grow On Trees!

Help for Landowners

Help is available from the Vermont Fish & Wildlife Department. Contact us to schedule a site visit, and to learn more about funding and incentive programs that may be available to you.

Quick Guide for Waterfront Landowners

If you have a stream, lake, or wetland on or beside your property, there are things you should know

Trees = Healthy Riparian Areas

- Trees help stabilize stream banks, filter runoff and pollutants, and provide habitat for fish and wildlife.
- Trees and shrubs reduce the amount of stormwater entering streams and provide shade that cools the water. Their roots take up excess nutrients and stabilize stream banks.
- Trees that fall into streams and rivers provide food and shelter for fish, trap sediment and slow down the flow of water during floods.

How You Can Help

Waterfront landowners can help improve the health of their watercourse by protecting their riparian area. A 100-foot wide forested riparian area protects the land, improves water quality and benefits fish and wildlife.

- Avoid removing trees from the riparian area. Protecting the riparian area is easier than restoring it.
- If trees have been removed, allow natural revegetation to take its course or re-establish the riparian area by planting native trees.
- Get your neighbors involved for a greater impact. The actions you take to protect your riparian area also benefit your neighbors downstream. It will take all of us working cooperatively in our communities to keep riparian areas healthy.
- Purchase a Conservation License Plate or Vermont Habitat Stamp to support aquatic habitat work statewide. Visit www.vtfishandwildlife.com for more information.

Benefits for Fish, Wildlife and Your Community

A healthy forested riparian area has economic and ecological benefits:

- Improves water quality and aquatic habitat.
- Increases bank stability.
- Decreases flooding and erosion hazards.
- Lowers stormwater management costs.

Stream Wise

Landowner Incentives

- LCBP funded effort with NY and Quebec
- Non-financial incentive to promote forested riparian areas
- Foster <u>watershed</u> communities
- Pilot program in 2 watersheds soon (TBD)

Coordinated Messaging

- Coordinate messaging about riparian areas among Government, NGO, Local, etc... partners
- Plan TBD
