Supporting and Summary Comments:

Only local or topical anesthesia is used for minor procedures.

E. The center does not have written consent forms but states that they spend time educating the patient about what will happen and how to take care of themselves.

Consultative Comments:

Suggest that the center use consent forms for procedures that consent for both anesthesia and the procedure; they can be on the same form. The blanks need to be filled in at the time of the service in addition to the verbal discussion and permission.
