Indicate how many credential files were reviewed: Five  
Describe how the records were selected: Different clinical disciplines and one clerical

Supporting and Summary Comments:

Credentialing is done by the organization itself. Almost every file was complete and data was available, but in a number of different places. Privileging is done and appropriate for the center.

B. There is evidence in minutes that the above is reported to and acted upon by the Governing Body.

Consultative Comments:

Suggest that thought be given to some consolidation of the credentialing files.
