Lab # 12
Poster Presentations

Scientific research has little meaning unless one shares and defends new insights with others.

The purpose of this lab is twofold: to give students a chance to present research in a public forum, and to allow others to listen and to ask questions about that research.

You (and maybe a partner) will make a poster of your lab report from any of the labs #1 - #11 and present your poster in lab #12. Sheets of poster board will be available during Lab #11. Look at any of the various posters in the display cases of Marsh Life Science Building and/or any other science building on campus. (Rowell, Given, Aiken, Terrill among others.)

Teaching Fellows and students should discuss the posters during lab #11 to answer any questions. Try to pick an experiment that you enjoyed and really understood. Try to vary the topics covered in each lab section.

Carol Bookwalter, Janet Mitchell and/or Gary Olivetti will attend each lab to listen and to ask questions. Be prepared to defend your inferences and assertions.

Each Poster Presentation will be given exactly 10 minutes. If two students present a poster together, each student MUST present equally.

This presentation is worth 20 points. Your Teaching Fellow will grade you based on how well you understand and explain what you have done.
