How to Connect to CDCI’s Share Drive From Off-Campus

This guide will walk you through connecting to the CDCI share drive from off-campus. If you have any questions or comments, please email cdcitech@uvm.edu.

1) Run the “Cisco AnyConnect Secure Mobility Client”. It will be in your applications folder in a folder called “Cisco” if you have it installed. If you don’t have it installed please follow these directions available online:

Mac: http://blog.uvm.edu/helpline-tech/sslvpn-mac/
Windows: http://blog.uvm.edu/helpline-tech/sslvpn-win/

2) Once cisco any connect is running, type “sslvpn.uvm.edu” (without quotes) in the field and click “Connect”. When you have entered your netid/password and it says connected, close or minimize all windows.

3) If you are using a Mac:
   a) Click on your computer’s background. You should now see a “Go” menu on the top of your screen.
   b) Select the “Go” menu, and choose the “Connect to Server…” option.
   c) In the “Server Address:” field of the window that appears enter the following text EXACTLY. Lowercase and uppercase DO matter.

smb://files.campus.ad.uvm.edu/shared/cess/Departments/cdci

d) Click “Connect”

   e) It will ask for your “Name” and “Password”. For “Name” enter your netid (mine is cvfergus). For your “Password” enter the same password you use for your UVM email.

   f) Click “Connect”

   e) It will load for a minute then bring you to the CDCI share drive.

4) If you are using Windows:
   a) Go to this website:

http://blog.uvm.edu/helpline-tech/connect-s-drive-win/

Follow the directions that are there. This is a website that is maintained by the UVM computer helpline and has very good directions (with pictures).
