Acquire the **skills & credentials** you need for high-wage, high-skill employment.

Certificate Programs in **STEM**

2 years or less
Certificate Programs

UVM certificate programs lead to careers in STEM (Science, Technology, Engineering and Math) and related fields such as information technology, computing, design, and manufacturing.

Through our certificates, you can build the knowledge and develop the skills you need for career advancement today.

Certificate Programs Include:
- Actuarial Science
- Complex Systems
- Computer Software

An academic certificate may be right for you if

- You want to build skills in a specific area that relates to your field of interest.
- You need a flexible path toward a professional development credential.
- You are interested in an undergraduate or a graduate degree and would like to earn a specialized credential along the way.

Benefits

The job market is in search of those who offer innovative solutions and a competitive edge. Our certificate programs will help you enhance your contribution to any company’s or organization’s success.

Certificate programs are less expensive than a bachelor’s or master’s degree program. In addition, since they’re often designed with working professionals in mind, several courses are offered online.

Funded with support from U.S. Department of Labor, Employment and Training Administration TAACCCT Grant.
