Lecture
MWF 11:45 – 12:35, Angell B203

Office Hours
T 10:30 – 11:30, Cook A116
F 1:00 – 2:00, Cook A116

Course Description
Chemistry 231 will cover the fundamentals of inorganic chemistry within the frameworks of molecular symmetry and qualitative molecular orbital theory. All areas of inorganic structure, bonding, and reactivity will be covered, with an emphasis on transition metal complexes.

Textbook

Web Content
Lecture notes, problem sets, and problem set answer keys will be available through Blackboard (bb.uvm.edu). These materials are available for all current, UVM-affiliated, students, but they may not be shared off-campus without permission of the instructor.

Preparation
Chapters 1–3 of Miessler and Tarr do an excellent job of reviewing the relevant background material for this course. Most of this material should have been covered in your General Chemistry course(s). I strongly encourage you to review this material early in the semester!

Course Goals
Upon completion of Chemistry 231, it is anticipated that you will:
1. Understand the relationship between molecular symmetry and bonding.
2. Appreciate the use of qualitative molecular orbital theory as a general approach that can explain the chemical properties of inorganic and organic molecules.
3. Recognize why transition metal complexes can have structures and properties unique from those of main group compounds.

Academic Honesty
As UVM students, you are expected to conduct yourself in accordance with the Code of Academic Integrity: http://www.uvm.edu/policies/student/acadintegrity.pdf
Course Outline

**Unit #1 – Fundamentals of Inorganic Chemistry**

I. Molecular Symmetry (Chapter 4)
II. Molecular Orbital Theory (Chapter 2, 5)

**Unit #2 – Structure and Bonding in Inorganic Systems**

III. Main Group Chemistry (Chapters 6, 8)
IV. Solid State Chemistry (Chapter 7)
V. Coordination Chemistry (Chapters 9-10)

**Unit #3 – Spectra and Reactivity of Inorganic Complexes**

VI. Electronic Spectroscopy (Chapter 11)
VII. Transition Metal Chemistry (Chapter 12)
VIII. Organometallic Chemistry (Chapter 14)
IX. Bioinorganic Chemistry

**Problem Sets**

Problem sets will be handed out approximately once a week throughout the course of the semester. These problem sets are intended to solidify your understanding of the major course concepts and challenge you to think critically using your new-found knowledge. Please follow a “no writing utensil” rule when discussing these assignments with your classmates. Problem sets are due at the beginning of class. Late Problem sets will not be accepted, but the two lowest scores will be dropped.

**Exams**

Three exams are scheduled for Chemistry 231, which will cover units 1 – 3 separately. In other words, the exams will not be cumulative. Exams #1 and #2 are scheduled for 7 PM on September 25 and October 28. Exam #3 will use our final exam time: December 12 at 10:30 AM.

**Grading**

Your grade will be based upon problem sets (25%) and three exams (25% each).
