# Math 255: Spring 2016 <br> Midterm 1 

## NAME:

## Time: 50 minutes

For each problem, you must write down all of your work carefully and legibly to receive full credit. For each question, you must use theorems and/or mathematical reasoning to support your answer, as appropriate.

Failure to follow these instructions will constitute a breach of the UVM Code of Academic Integrity:

- You may not use a calculator or any notes or book during the exam.
- You may not access your cell phone during the exam for any reason; if you think that you will want to check the time please wear a watch.
- The work you present must be your own.
- Finally, you will more generally be bound by the UVM Code of Academic Integrity, which stipulates among other things that you may not communicate with anyone other than the instructor during the exam, or look at anyone else's solutions.

I understand and accept these instructions.

Signature: $\qquad$

| Problem | Value | Score |
| :---: | :---: | :---: |
| 1 | 7 |  |
| 2 | 7 |  |
| 3 | 8 |  |
| 4 | 8 |  |
| 5 | 4 |  |
| 6 | 8 |  |
| 7 | 8 |  |
| TOTAL | 50 |  |

## Problem 1: (7 points)

a) (4 points) Compute $\operatorname{gcd}(252,198)$. You may use any technique you like, but you must justify your answer.
b) (3 points) Based on your answer above, does the equation $252 x+198 y=9$ have solution(s) in the integers? Please justify with one sentence.

## Problem 2: (7 points)

a) (3 points) Give the definition of $a \equiv b(\bmod n)$.
b) (4 points) Prove that if $a \equiv b(\bmod n)$, then also $b \equiv a(\bmod n)$.

Problem 3: (8 points) Prove the following statement using induction:

$$
\sum_{j=0}^{n} 2^{j}=2^{n+1}-1 \quad \text { for all } n \geq 1
$$

Problem 4: (8 points) Find the remainder when the sum

$$
\sum_{i=1}^{100} i^{5}=1^{5}+2^{5}+\cdots+100^{5}
$$

is divided by 5 .

## Problem 5: (4 points)

For each question you may justify your answer with a theorem from class or a multiplication table.
a) (2 points) List all units in the ring $\mathbb{Z} / 8 \mathbb{Z}$.
b) (2 points) List all zero divisors in the ring $\mathbb{Z} / 8 \mathbb{Z}$.

## Problem 6 : ( 8 points)

a) (5 points) Find all integer solutions to the equation

$$
17 x+16 y=5
$$

b) (3 points) Find all positive integer solutions to the equation above.

Problem 7: (8 points) For $a$ an arbitrary integer, show that

$$
\operatorname{gcd}(2 a+1,9 a+4)=1
$$
