# CHEM 35 <br> General Chemistry <br> EXAM \#3 

November 15, 2000
Name: $\qquad$ Largo, Key

SSN: $\qquad$
Lab T.A.: $\qquad$
I NSTRUCTI ONS: Read through the entire exam before you begin. Answer all of the questions. For questions involving calculations, show all of your work -- HOW you arrived at a particular answer is MORE important than the answer itself! Circle your final answer to numerical questions.

The entire exam is worth a total of 150 points. Attached are a periodic table and a formula sheet jam-packed with useful stuff. Good Luck!

HMM NOTHING ELSE FELL UP. NUST ME. THIS IS VERY STRANGE.

| Page | Possible <br> Points | Points <br> Earned |
| :---: | :---: | :--- |
| $\mathbf{2}$ | 30 | 30 |
| $\mathbf{3}$ | 30 | 30 |
| $\mathbf{4}$ | 15 | 15 |
| $\mathbf{5}$ | 30 | 30 |
| $\mathbf{6}$ | 20 | 20 |
| $\mathbf{7}$ | $\mathbf{2 5}$ | 25 |
| TOTAL: | $\mathbf{1 5 0}$ | 150 |

1. For the Hydrogen atom:
a. (10 pts) Calculate the energy change (in Joules) associated with an $\mathrm{n}=2$ to $\mathrm{n}=4$ electronic transition.

$$
\begin{aligned}
\Delta \mathrm{E} & =R_{\mathrm{H}}\left(1 /\left(\mathrm{n}_{\mathrm{i}}\right)^{2}-1 /\left(\mathrm{n}_{\mathrm{f}}\right)^{2}\right) \\
& =\left(2.1798741 \times 10^{-18} \mathrm{~J}\right)\left(1 /(2)^{2}-1 /(4)^{2}\right) \\
& =\left(2.1798741 \times 10^{-18} \mathrm{~J}\right)(1 / 4-1 / 16) \\
& =\left(2.1798741 \times 10^{-18} \mathrm{~J}\right)(0.1875) \\
& =4.0872639 \times 10^{-19} \mathrm{~J} \\
& =4.0873 \times 10^{-19} \mathrm{~J}
\end{aligned}
$$

b. ( 5 pts ) Is a photon emitted or absorbed as a result of this transition?

## EMITTED

## ABSORBED circle one

c. ( 10 pts ) Calculate the wavelength ( nm ) of the photon having the same energy as the energy change associated with this transition.
$\mathrm{E}=\mathrm{hc} / \lambda \rightarrow \lambda=\mathrm{hc} / \mathrm{E}$

$$
\begin{aligned}
\lambda & =\frac{\left(6.62606876 \times 10^{-34} \mathrm{~J}-\mathrm{s}\right)\left(2.9979 \times 10^{8} \mathrm{~m} / \mathrm{s}\right)}{4.0872639 \times 10^{-19} \mathrm{~J}} \\
& =4.860046 \times 10^{-7} \mathrm{~m} \\
& =4.860046 \times 10^{-7} \mathrm{~m} \times \frac{10^{9} \mathrm{~nm}}{\mathrm{~m}} \\
& =\underline{4.860 \times 10^{2} \mathrm{~nm}} \text { or } \frac{\mathbf{4 8 6 . 0} \mathrm{nm}}{}
\end{aligned}
$$

d. (5 pts) Is the photon in the visible portion of the electromagnetic spectrum?

2. (5 pts each) Write the ground state electron configurations for the following atoms and ions (use noble gas abbreviations for core electrons where appropriate):
a. Na: [Ne] $3 s^{1}$
b. Co: $\quad[\mathrm{Ar}] 4 s^{2} 3 d^{7}$
c. $\mathrm{Cu}^{3+}: \quad\left[\right.$ Ar] $3 d^{8}$
d. $\mathrm{Au}: \quad[\mathrm{Xe}] 4 \mathrm{f}^{14} 6 \mathrm{~s}^{1} 5 \mathrm{~d}^{10}$
3. ( 10 pts ) Give the values of the 4 quantum numbers ( $n, I, m_{l}$, and $m_{s}$ ) for each of calcium's two valence electrons.
$\mathrm{Ca}:[\mathrm{Ar}] \underline{4 \mathrm{~s}^{2}} \Rightarrow \boldsymbol{n}=4,1=0, \boldsymbol{m}_{1}=0, \boldsymbol{m}_{\boldsymbol{s}}=+1 / 2$

$$
n=4,1=0, m_{1}=0, m_{s}=-1 / 2
$$

4. (5 pts each) Circle the number next to the appropriate response for each of the following:
a. That no two electrons in an atom can possess the same set of 4 quantum numbers is a consequence of:
5. The Aufbau Principle
6. The Heisenberg Uncertainty Principle
7. Hund's Rule
8. Pauli Exclusion Principle
9. Robert's Rules of Order
b. Einstein's explanation of the photoelectric effect:
10. illustrated the wave properties of matter
11. inspired Thomas Edison to invent the light bulb
3.) applied Planck's quantum theory of electromagnetic radiation
12. utilized his newly developed theory of relativity
13. was inspired by his observations of how a violin string vibrates
c. The Bohr model of the atom:
14. was first proposed by Balmer more than 30 years before Bohr
15. accurately predicts the line emission spectrum for the hydrogen atom
16. is based on the wave properties of the electron in a hydrogen atom
17. was originally made out of balsa wood using simple hand tools in Bohr's garage
18. is also known as the "plum pudding" model of the atom
19. (5 pts each) For the following, circle the species in each row with the desired property:

20. (10 pts) Recall the thermite reaction:

$$
2 \mathrm{Al}(\mathrm{~s})+\mathrm{Fe}_{2} \mathrm{O}_{3}(\mathrm{~s}) \rightarrow \mathrm{Al}_{2} \mathrm{O}_{3}(\mathrm{~s})+2 \mathrm{Fe}(\mathrm{~s})
$$

This highly exothermic reaction is used for welding massive objects, such as propellers for large ships. Using the standard molar enthalpies of formation given below, calculate $\Delta \mathrm{H}^{\circ}(\mathrm{kJ})$ for this reaction.

$$
\begin{aligned}
& \Delta \mathrm{H}_{\mathrm{f}}^{0}\left(\mathrm{Fe}_{2} \mathrm{O}_{3}(\mathrm{~s})\right)=-822.16 \mathrm{~kJ} \\
& \Delta \mathrm{H}_{\mathrm{f}}^{\circ}\left(\mathrm{Al}_{2} \mathrm{O}_{3}(\mathrm{~s})\right)=-1669.8 \mathrm{~kJ} \\
\Delta \mathrm{H}^{\circ}= & {[(-1669.8 \mathrm{~kJ})+2(0)]-[(-822.16 \mathrm{~kJ})+2(0)] } \\
= & -847.64 \mathrm{~kJ} \\
= & -847.6 \mathrm{~kJ}
\end{aligned}
$$

7. ( 10 pts ) The specific heat of copper metal is $0.385 \mathrm{~J} / \mathrm{g}-\mathrm{K}$. How many Joules of heat are necessary to raise the temperature of a $1.42-\mathrm{kg}$ block of copper from $25.0^{\circ} \mathrm{C}$ to $88.5^{\circ} \mathrm{C}$ ?

$$
\begin{aligned}
& \mathrm{m}=1.42 \mathrm{~kg} \times \frac{1000 \mathrm{~g}}{\mathrm{~kg}}=1.42 \times 10^{3} \mathrm{~kg} \\
& \begin{aligned}
\Delta \mathrm{T} & =88.5-25.0{ }^{\circ} \mathrm{C}=63.5{ }^{\circ} \mathrm{C}=63.5 \mathrm{~K} \\
\mathrm{C}_{\mathrm{s}} & =0.385 \mathrm{~J} / \mathrm{g}-\mathrm{K} \\
\mathrm{q}=\mathrm{mc}_{\mathrm{s}} \Delta \mathrm{~T} & =\left(1.42 \times 10^{3} \mathrm{~kg}\right)(0.385 \mathrm{~J} / \mathrm{g}-\mathrm{K})(63.5 \mathrm{~K}) \\
& =3.4715 \times 10^{4} \mathrm{~J} \\
& =3.47 \times 10^{4} \mathrm{~J}
\end{aligned}
\end{aligned}
$$

8. (10 pts) Given the following data:

$$
\begin{array}{ll}
\mathrm{N}_{2}(\mathrm{~g})+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{NO}(\mathrm{~g}) & \Delta \mathrm{H}=+180.7 \mathrm{~kJ} \\
2 \mathrm{NO}(\mathrm{~g})+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{NO}_{2}(\mathrm{~g}) & \Delta \mathrm{H}=-113.1 \mathrm{~kJ} \\
2 \mathrm{~N}_{2} \mathrm{O}(\mathrm{~g}) \rightarrow 2 \mathrm{~N}_{2}(\mathrm{~g})+\mathrm{O}_{2}(\mathrm{~g}) & \Delta \mathrm{H}=-163.2 \mathrm{~kJ}
\end{array}
$$

use Hess's law to calculate $\Delta \mathrm{H}(\mathrm{kJ})$ for the following reaction:

$$
\mathrm{N}_{2} \mathrm{O}(\mathrm{~g})+\mathrm{NO}_{2}(\mathrm{~g}) \rightarrow 3 \mathrm{NO}(\mathrm{~g})
$$

$$
\underline{1 / 2 \operatorname{Rxn} 3}: \mathrm{N}_{2} \mathrm{O}(g) \rightarrow \mathrm{N}_{2}(g)+\frac{1}{2} \mathrm{O}_{2}(g) \quad \Delta \mathrm{H}=1 / 2(-163.2)=-81.60 \mathrm{~kJ}
$$

$$
-1 / 2 \mathrm{Rxn} \mathrm{2}: \mathrm{NO}_{2}(g) \rightarrow \mathrm{NO}(g)+\frac{1}{2} \mathrm{O}_{2}(g) \quad \Delta \mathrm{H}=-1 / 2(-113.1)=+56.55 \mathrm{~kJ}
$$

$$
\underline{\operatorname{Rxn~1}}: \mathrm{N}_{2}(\mathrm{~g})+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{NO}(\mathrm{~g}) \quad \Delta \mathrm{H}=\quad+180.7=+180.7 \mathrm{~kJ}
$$

$$
\mathrm{N}_{2} \mathrm{O}(g)+\mathrm{NO}_{2}(g) \rightarrow 3 \mathrm{NO}(g)
$$

$$
\Delta \mathrm{H}=+155.65 \mathrm{~kJ}
$$

$$
=+155.6 \mathrm{~kJ}
$$

9. For $\mathrm{N}_{2}$ :
a. (5 pts) Write the ground-state electron configuration, using the appropriate building-up sequence.
$7 \times 2=14 e^{-}$
$\boldsymbol{N}_{2}:\left(\sigma_{1 s}\right)^{2}\left(\sigma^{*}{ }_{1 s}\right)^{2}\left(\sigma_{2 s}\right)^{2}\left(\sigma^{*}{ }_{2 s}\right)^{2}\left(\pi_{2 p}\right)^{4}\left(\sigma_{2 p}\right)^{2}$
b. (10 pts) Show the orbital populations on a molecular orbital energy diagram.
For the p-electrons:

$$
2 p \uparrow+\uparrow
$$

N
c. (5 pts) What is its bond order?
$\mathrm{bo}=1 / 2(6-0)=\underline{3}$
d. (5 pts) Is the system paramagnetic? Why/why not?

All of the electrons are paired, so the system is not paramagnetic.

$$
\begin{aligned}
& \sigma^{*}{ }_{2 p} \\
& =-\quad \pi^{\star}{ }_{2 p} \\
& \uparrow \uparrow \uparrow 2 p \\
& \xrightarrow{\uparrow \downarrow} \sigma_{2 \mathrm{p}} \\
& \xlongequal{\uparrow \downarrow} \xlongequal{\uparrow \downarrow} \pi_{2 \mathrm{p}} \\
& \underline{N}_{2} \\
& \text { N }
\end{aligned}
$$
