The University of Vermont reserves the right to make changes in the course offerings, degree requirements, charges and regulations and procedures contained herein as educational and financial considerations require, subject to and consistent with established procedures and authorizations for making such changes.

It is the policy of the University of Vermont not to discriminate against any person on the basis of sex, race, national origin, color, religion, age, or physical/mental handicap, in accordance with Title VI of the Civil Rights Act of 1964, Title VII of the Civil Rights Act of 1972 (Executive Order 11246), Title IX of the Higher Education Act of 1972, the Age Discrimination Act of 1967 (as amended), and Section 504 of the Rehabilitation Act of 1973.

The University has embarked on a program to remove architectural barriers to make facilities accessible to and usable by the handicapped. Questions should be referred to the Office of Architectural Barrier Control.

* * *

Although its legal title is The University of Vermont and State Agricultural College, the University is known to its students and alumni as UVM. This popular abbreviation is derived from the Latin Universitas Virdis Montis.

Clinical Psychology — American Psychology Association.

MEDICINE: American Medical Association, Association of American
Medical Colleges.

AGRICULTURE: Vocational Education & Technology.

EDUCATION: National Council for Accreditation of Teacher Education.
National Council for Social Work Education.
Introduction

The earliest public action concerning a university in Vermont was the inclusion in the constitution of the Independent Republic of Vermont of a section dealing with education. In this act adopted at Windsor, July 2, 1977, Section 40 states in part that "one grammar school in each county and one university in the state ought to be established by direction of the General Assembly". No action was taken by the Assembly to establish a university except that in granting charters to towns, it did require that one right of land be established for the endowment of a college or university.

By 1785 there was a substantial amount of public sentiment in favor of establishing a college or university in Vermont. In that year Elijah Paine of Williamstown offered the General Assembly the sum of 2,000 pounds. Four years later Ira Allen offered the sum of 4,000 pounds. These and other offers caused the General Assembly to appoint a committee to study the matter and to canvass the state in order to determine where the university should be located. This committee reported to the session of 1791 at which time the General Assembly decided that a university was to be founded to serve the state. A ballot was taken on the question of location and a decision was made in favor of Burlington, presumably because of the substantial support offered by Ira Allen, the Rev. Samuel Williams, and their associates. The General Assembly further voted to create a committee to draft a charter of the University. The report of the committee was adopted with amendments on November 3, 1791, as the charter law of the University of Vermont. The University became the twentieth college in the United States and the fifth in New England chartered to confer the bachelor's degree. It is worthy of note that the University is the second to be established by a state legislature after the formation of the United States. The action of the 1791 Legislature also makes The University of Vermont the oldest institution of higher education in the Green Mountain State.

Thus did the founding Legislature of Vermont establish a university which was to develop like no other in the fledgling nation.

While the enabling legislation provided for funding to come from rents, those were often fixed at "$.25 per acre as long as grass is green and water runs", and in any event were not reliably collectable.

One result is the tradition, born of necessity, which has seen The University of Vermont develop in many of the same ways as the private institutions of the country have developed, with a substantial reliance on alumni and other private philanthropy.

The first building was subscribed by citizens of Burlington and when fire destroyed that "edifice" in 1824, its successor, for which General
Lafayette laid the cornerstone, was again made possible by the citizens of Burlington.

That building, the Old Mill — still in use today — was only the first in a long line to be made possible by private philanthropy. The list includes all but one of the buildings on University Row: Ira Allen Chapel, Billings, Williams, Old Mill, and The Royall Tyler Theatre. Morrill Hall, the first UVM building to be provided by state funding, did not come until 1907.

Other buildings made possible by private philanthropy include Waterman Memorial, Southwick, Fleming Museum, Converse, Dewey and Lafayette Halls.

Medical alumni and other friends raised approximately $7,000,000 to match federal grants to make possible the Given Medical Building, its Medical Alumni Building wing, and the Dana Medical Library. In addition to a challenge grant from the Dana Foundation, the project attracted a $2,000,000 grant from the Given Foundation, the single largest building gift the University has received to date.

Alumni and other friends also raised more than $1,000,000 of the $3,000,000 cost the Patrick Gymnasium, Gutterson Field House, Forbush Pool complex. The remainder is being paid by students, through retirement of a bond issue. In like fashion, student rents have made possible most of the campus residence halls, which currently house about 4,000 of the University’s 7,400 undergraduates.

The University of Vermont was founded in a day when U.S. colleges and universities existed primarily to educate men for the professions, especially for the ministry.

Yet, in studying University history, Professor Emeritus Betty Bandel discovered that “this small institution located in a frontier community of New England became a pioneer in the kind of practical education which later became the basis for the establishment of the Land Grant universities — those institutions which made it possible for the sons and daughters of average citizens to aspire to a college education”.

For example, she noted that the University is believed to be the first non-military institution to have offered engineering courses, and early alumni of the University included men such as John Kasson who was instrumental in founding the international postal system; and Henry Raymond, a founder of The New York Times.

Tucked in the northwest corner of the Ira Allen Chapel grounds is a memorial to a late 19th century graduate of this University, philosopher John Dewey, whose ideas about practical education are still debated with passionate vigor.

Ten Academic Divisions

By contemporary standards, The University of Vermont is a relatively small university.
Its 7,400 undergraduates enrolling in eight colleges and schools — the Colleges of Agriculture; Arts and Sciences; Education and Social Services; and Engineering, Mathematics and Business Administration; and the Schools of Allied Health Sciences; Home Economics; Natural Resources; and Nursing — share the 420 acre main campus with some 800 students enrolling in the Graduate College and another 320 in the College of Medicine.

The Division of Continuing Education offers courses on campus and in many communities throughout the State of Vermont during the fall and spring semesters and during the Summer Session.

The largest single share (about 30 per cent) of the University’s current total operating budget of $65 million is obtained from student tuitions. Grants and contracts (the University is among the top 100 U.S. institutions of higher learning in competition for federal research, training and equipment grants) account for about 25 per cent.

The state appropriation is currently about 18 per cent of the total budget.

The remainder comes from a variety of sources, including alumni and other private philanthropy, endowment, sales and services and auxiliary enterprises.

Endowed Chairs

Since the establishment of the Williams Professorship in Mathematics in 1853, the University has been the recipient of a number of generous endowments intended to support teaching and research in various academic fields. Among them are:

The Williams Professorship of Mathematics, 1853, honoring Azarias Williams of Concord, Vt., merchant and judge, native of Sheffield, England, who in 1839 deeded to the University extensive holdings in land, at that time valued at $25,000. In return he received a small annuity during the remaining ten years of his life.

The Marsh Professorship of Intellectual and Moral Philosophy, established in 1867 to honor James Marsh, distinguished UVM president and philosopher of the 1830’s. Many alumni contributed to the fund which established this chair.

The Pomeroy Professorship of Chemistry, established in 1878 by John N. Pomeroy, A.B., 1809, who lectured on chemistry and later, during his career as a lawyer in Burlington, served as trustee of the University. He was awarded the L.L.D. in 1861.

The Howard Professorship of Natural History and Zoology, established in 1881 by John Purple Howard, a Burlington resident who was a generous benefactor both of the University and of the City of Burlington.

The Flint Professorship of Mathematics, Natural or Technic Science, frequently awarded in the field of civil engineering, established in 1895
INTRODUCTION

by a bequest from Edwin Flint, A.B., 1836, lawyer and judge in Wisconsin and Iowa until his death in 1891 in Mason City, Iowa.

The Converse Professorship in Commerce and Economics, established in 1899 as a result of an endowment made by John H. Converse, A.B., 1861, LL.D., 1897, Philadelphia railroad financier, who as a trustee of the University proposed the teaching of Latin, modern languages, history, bookkeeping, penmanship, and other subjects necessary to men and women.

The Thayer Professorship of Anatomy, established in 1910 to honor Dr. Samuel White Thayer, Dean of the College of Medicine from 1854-71 and 1880-82, from contributions made by alumni of the College of Medicine.

The McCullough Professorship of Political Science, established in 1926 through grants made by Gov. and Mrs. John G. McCullough of Bennington, Vt. Gov. McCullough was a lawyer and attorney general in California during the mid-nineteenth century; later a railroad financier and benefactor of many educational and other enterprises during his long residence in Vermont.

The Perkins Professorship of Zoology, established in 1931 to honor George H. Perkins, for sixty-four years a teacher of science and dean of the College of Arts and Sciences for many years. Grant for this professorship was made by John E. Lynch of Boston, Mass.

The Shipman Professorship of Ophthalmology, established in 1934 by a bequest from Dr. Elliot W. Shipman, M.D., 1885. After beginning his practice in Vergennes, Vt., and studying ophthalmology in Berlin, Dr. Shipman practiced medicine in Richmond Hill, N.Y., for thirty-five years.

The Corse Professorship of English Language and Literature, established in 1952 by Frederick M. and Fannie C. P. Corse. Mr. Corse, A.B., 1888, and registrar and teacher of mathematics and economics in the University during the 1890’s, was general manager for Russia of the New York Life Insurance Company, with offices in Stalingrad (Petrograd) for seventeen years before the Russian Revolution of 1917.

The Lawrence Forensic Professorship of Speech, established in 1965 by Edwin W. Lawrence, lawyer and financier of Rutland, Vt., A.B., 1901, generous patron of forensic activities at the University.

The Sanders Professorship, established in 1968 as a chair endowed by the alumni, honoring the Rev. Daniel Clarke Sanders, first president of the University.

Statement of Purpose

The University of Vermont is a community of scholars, and it exists to promote the survival and enrichment of man and his environment
by contributing to the improvement in the quality of life in Vermont and the larger society . . . broadly conceived to encompass the educational, cultural, social, medical, economic, and technological dimensions of human experience.

The University aspires to contribute to the improvement in the quality of human experience and the conservation of the environment through the performance of three broad missions.

These include transmission of knowledge and understanding and the development of human potential, both intellectual and personal, through its education programs;

Expansion and organization of knowledge and understanding through research and other creative endeavors; and

Dissemination of knowledge and understanding and the application of such knowledge and understanding to solving problems of importance to Vermont, the region, and society at large.

Together, these missions comprise the public service role of the University of Vermont and they provide the basis for its general educational goals.

The University Libraries

In the Guy W. Bailey Library, the main unit of the University Libraries, are located the services and collections relating to the humanities, social sciences, and many of the sciences. This library holds the largest book and map collection in Vermont, and maintains a representative collection of the major periodicals, scholarly journals, indexes, and abstracting services. It is a depository for United States and Canadian government publications. The Special Collections Department includes the Wilbur Collection of Vermontiana, rare books, literary and historical manuscripts, and the papers of many individuals associated with State and the Federal government.

A separate Physics and Chemistry Library is located in the Cook Physical Science Building. Collections in medicine and the health sciences are located in the Dana Medical Library. The University Archives in the Waterman Building contain the permanent, official records of the University.

Conferences and Institutes

An increasing number of groups hold educational conferences, institutes and seminars on the campus of the University, which is pleased to cooperate in making its facilities available for this purpose whenever it is possible to do so. Charges are made to cover costs to the University.

Further information may be obtained through the Office of Conferences and Institutes.
Vermont Educational Television

Vermont Educational Television is the public television network owned and operated by the University of Vermont, serving the state.

With studios and offices on the Fort Ethan Allen campus, the network provides an instructional service to schools, college courses for credit, programs for children out-of-school, and a broad spectrum of Eastern Educational Network and Public Broadcasting Service programs for Vermonters. Locally produced programs address the concerns and issues.

Programs are broadcast over WETK-TV, channel 33, Burlington; WVTB, channel 20, St. Johnsbury; WVER, channel 28, Rutland; and WVTA, channel 41, Windsor; and on channels 74, 76, 79 at Manchester, Wilmington, and Bennington.
Student Life

STUDENT PERSONNEL SERVICES

A STATEMENT OF MISSION

Until recently, the student personnel function at most universities was traditionally thought of only as a function of control of student behavior through rule enforcement and strict discipline. As modern universities began to re-evaluate their missions they assessed the total educational experience on their campuses. This led to a concern about the quality of student life on campus and the impact of campus environments on students. This was the beginning of Student Personnel Services as they are known today. As a result, student personnel educators began to develop programs to meet some specific developmental needs that were common to college age young adults.

It should be recognized that students are going through a period of rapid personal growth while on the college campus. In addition to developing new academic skills, they are being challenged to pursue new ideas, evaluate their values systems, change existing attitudes, and investigate new life styles. They are exploring future career options and learning social and interpersonal skills.

Therefore, the broad focus of the Student Personnel Services at the University of Vermont is to provide support services to students during this time of intense personal development and intellectual growth, in addition to playing a leadership role in developing experiences, policies, and programs to provide learning and leadership opportunities for students in concert with the formal instructional mission of the institution.

To accomplish this mission the student life areas are divided into various functional departments and programs. Each of these provide or coordinate support services and educational experiences to meet student needs.

COUNSELING AND TESTING CENTER

The Counseling and Testing Center is a human resource center available on a no-fee basis to UVM matriculated students, faculty, and staff. We are concerned with increasing the power of individuals and groups to live more effectively and more confidently through greater understanding of the self, others, and the nature of change. A professional staff offers confidential individual and group counseling for a wide range of concerns — educational, vocational, personal and social. The Center also provides a testing service ranging from vocational testing to national exams. We also have an outreach program with a variety of growth experiences; study skills workshops, women's groups, life
style planning, values clarification, and such. Referral to other appro­
riate specialties such as Psychiatric Services; Reading Center, and
Career Planning and Placement is also available.
146 South Williams Street
656-3340

CAREER PLANNING AND PLACEMENT

The Office of Career Planning and Placement is organized to provide
all students with comprehensive assistance in exploring and implement­
ing their career objectives. This function consists of two major efforts.
The first is to provide direct assistance to students in clarifying career
objectives based on their own skills, interests, needs and abilities. The
primary emphasis is through self-awareness, occupational awareness,
skill development, and finally entry into the career areas which are
complementary to their desired lifestyles. This process is accomplished
through one-to-one counseling and/or small group workshops. Along
with providing career counseling, students will find the information
contained in the Career Resource Library helpful in developing their
career goals. The library, which is located within this office, contains
literature on various fields, occupational outlooks, salary surveys which
are updated four times per year, government opportunities at all levels,
as well as a variety of literature describing current career opportunities
in both large and small corporations in the private sector. For those
students contemplating further graduate study, the library contains two
complete guides to all graduate programs in the country and a variety
of graduate school catalogues from other universities. This information
is expanding and being updated continuously in the behalf that effec­
tive choices must be based on current and reliable information.

Once a student has been able to develop some tentative goals the
office assists in his/her attempts to implement these goals. The office
has a very active on-campus recruiting program which brings local and
national employer representatives to campus for employment interviews.
All part-time and summer employment opportunities are posted and
made available to students attempting to offset a portion of their educa­
tional expenses or gain experience in a field of their interest. To assist
students in their employment search, the staff will provide help in devel­
opng an effective resume, conducting employment interviews, compil­
ing a credentials file, and help in drafting an overall employment search
program.

Students are encouraged to make use of the Office of Career Planning
and Placement early in their educational program. Having a goal or
direction to your education will enable you to make effective career-
related decisions.
109 South Prospect Street
656-3450
FINANCIAL AID

Students enrolled (or planning to enroll) in at least six credit hours, who feel they are unable to meet college expenses, are urged to apply to the Office of Financial Aid for assistance in the form of grants, loans, and employment. Entering undergraduate students who wish to apply for aid may do so by: (1) indicating their intention on the Admissions Application Form, and (2) submitting the Family Financial Statement (not the Parent’s Confidential Statement) directly to the American College Testing Program in Iowa City, Iowa.

The Family Financial Statement forms may be obtained from local high schools or by request to the Office of Financial Aid, 330 Waterman Building, University of Vermont, Burlington, VT 05401. Forms should be submitted to American College Testing no later than April 1.

ALL STUDENTS REQUESTING AID SHOULD ALSO APPLY TO THE FOLLOWING SOURCES:

A. The Basic Educational Opportunity Grant Program (BEOG)
   Applications are available from the Office of Financial Aid and High School Guidance Offices

B. State Agencies
   1. Vermonters: Vermont residents must apply to the Vermont Student Assistance Corporation, 156 College Street, Burlington, VT 05401.
   2. Non-Vermonters: The University has very little scholarship/grant aid for non-resident applicants; thus, aid usually is in the form of long-term loans and/or work-study assistance. Non-residents should explore scholarship opportunities available in their home states and communities.

ALL STUDENTS MUST REAPPLY FOR AID EACH YEAR Continuing students can obtain an Upperclass Financial Aid Application from the Office of Financial Aid. They must also submit the Family Financial Statement to the American College Testing Program. Both forms are available early in the Spring semester from the Office of Financial Aid. Preference is given to those students who have complete applications on file by May 1st. Applications received after that date will be processed in chronological order according to the date received, subject to the availability of funds.

330 Waterman Building
656-3156

VETERANS AFFAIRS

This office provides support, coordination of services, and advising to any veteran or dependent eligible for benefits under Federal Law, Chapters 31, 34, or 35. Those persons eligible for these benefits should contact the office at least one month prior to registration each semester.
Those persons wishing to register for benefits should be prepared to present their certificate of eligibility to the Veterans Coordinator. It is important that all veterans and dependents keep in contact with this office for the latest information with regard to benefits and requirements. Also, those students involved in the Veterans Program should contact this office in the event of any change in credit load, depending status, address, or major.

318 Waterman Building
656-4220

READING CENTER

The University Reading Center, located in the Waterman Building, provides a free program for students who wish to improve their reading, vocabulary and study techniques. Some tutorial services are also available. The first semester classes are open primarily to freshmen whose college entrance examinations indicate such a need. However, other students who are in need of improvement are urged to enroll in the reading program. Students who enroll are expected to attend regularly throughout the semester.

406 Waterman Building
656-3838

SPEECH AND HEARING CENTER

Services of the Speech and Hearing Center, located in Allen House, are free to students in the University who have problems of speech, language, voice, and hearing: for example, problems of articulation, dialect, stuttering, inefficient voice production, hearing loss, and those problems associated with such conditions as cleft palate and cerebral palsy.

Allen House
656-3861

OFFICE OF VOLUNTEER PROGRAMS

OVP, a center for service-learning, provides the means for students to work at community projects, either on or off campus, as a part of their educational program at the University. Through service-learning a student may work in education, administration of justice, social services, health, economic development, environmental, governmental, recreation or commercial settings as an added dimension of undergraduate or graduate learning. Students may participate at various levels of intensity, either as volunteers, as interns or as University Year for ACTION Interns.

Students often become involved initially as volunteers, either through contract with a sponsoring agency or program or through a student project such as Big Brother/Big Sister, Council for Exceptional Children, Adopt-A-Grandparent, Vermont Special Olympics, GYST (Get Your Stuff Together), C-AHEAD (Center for Alternatives in Higher Educa-
Students may organize and coordinate a project as a part of the Project Coordinator's Council. The P.C.C. is an organization of student project coordinators, funded by the Student Association, which works in "partnership" with OVP to meet community needs. As volunteers, students gain valuable experience and explore personal and career interests as they perform community tasks.

Students may choose to integrate some of their academic and community interests as they select courses and programs that allow for service to be combined with study. OVP assists students and faculty in designing appropriate service-learning assignments. The Community Service-Learning Internship Program is provided for students who want to become involved on a more extensive basis (for example, for a semester or half-time for a year). OVP assists in project planning and contracting arrangements and provides a seminar for student participants.

Interested students may apply for acceptance to the University Year for ACTION Program, which enables students to become totally involved in service-learning, full time for a year. Students work with faculty and agencies to plan for involvement in UYA during the year prior to actual placement. The UYA Service-Learning design is tailored to meet the unique needs of each participant. During the actual UYA year, students work in agency projects under supervision of program staff while simultaneously fulfilling academic objectives and evaluation requirements with faculty. UYA's also receive a stipend to cover living costs and are expected to live in the communities where they work.

Through the Volunteer program, the Community Service-Learning Internship Program and University Year for ACTION, OVP assists students, faculty and agencies with information, project planning and technical assistance. OVP also provides financial, transportation, training, publicity and personal support required to achieve student service-learning goals.

Staff: Harold D. Woods, Director; David A. Osgood, Assistant Director; Donna L. Lavins, Program Coordinator.
Mansfield House
25 Colchester Avenue
656-2062

PREMEDICAL/PREDENTAL ADVISING

The Premedical/Predental Advising Office, located within the Dean of Student's Offices, exists to provide assistance and support to all students preparing for entry to medical and dental schools. The office provides general counseling, advising and referral services to students with academic and non-academic questions and concerns.

Students are encouraged to use the office early in their careers in planning their undergraduate experience to ensure that specific pre-professional
requirements are met and that the background they are obtaining best fulfills their individual educational and personal goals, while simultaneously meeting the requirements of medical/dental schools. Also, students not already assigned a premedical/predental academic advisor may request the assignment of an advisor through this office.

Information and advice is provided to students who are in the process of applying to medical, dental, and other health professional schools. The Premedical/Predental Advisor works in coordination with the Premedical/Predental Advisory Committee in preparing student letters of evaluation, as required by the majority of medical, dental, and health professional schools as part of the application process.

Materials for registration for the required pre-professional examinations and application services are available. A resource library is also maintained for the use of students. This library contains medical and dental school catalogues and catalogues for professional schools in related health fields, as well as miscellaneous health careers literature.

Students are encouraged to explore their personal and career goals through participation in small group discussions organized by this office.

316 Waterman Building
656-3380

**Student Activities**

Participation in student activities is a vital part of any student's education at the University. The Student Activities office serves as a resource center for students seeking direction and support for the development of experiences and programs that offer recreation, learning, and leadership opportunities. This office totally involves itself in working with students to verbalize their needs and interests, determine their own goals and objectives, develop and produce their own programs, and evaluate their own experiences in terms of personal growth and future program direction. This is the kind of participation in university life that students have found to be a vital part of their total education. However, it is left up to the individual to contact the Student Activities Office to take advantage of these opportunities.

There are approximately 70 student organizations that exist on the UVM campus. These organizations develop out of a unique interest area common to a group of students. Some of the larger organizations are listed below:

**Alpha Lambda Delta**
**American Society of Civil Engineers**
**American Society of Mechanical Engineers**
**Anthropology Club**
**John Dewey Philosophy Club**
**Judo Club**
**Lacrosse Club**
**L’Amicale Francaise**
**Lawrence Forensic**
**Meeting of the Ways**
THE BILLINGS CENTER

The Billings Center, formerly Billings Library, is the University of Vermont student center. As such, it is a multi-purpose building used as a focal point for student activities. The facilities of the building provide space for lectures, films, small theatre and musical presentations, small and large group meeting rooms, study and recreational lounges, and the Catamount Den, a snack bar facility. Billings also houses several student organization offices, i.e., Student Association, Greek Coordinating Council, Women’s Organization, Gay Student Union, Billings Center Governing Board, Cynic, Ariel, Concert Bureau, Speakers Bureau, and Films Bureau.
The Student Activities Office, located in Billings Center, provides many services to students in addition to advice and information on program development and planning. An all-campus information number, 656-2068, provides complete details on campus programs, rides wanted and offered, apartment listings, and general referral information. There is also a sales desk for newspapers, candy, cigarettes, and bookstore supplies which is open on weekends and evenings.

UVM STUDENT ASSOCIATION

All students enrolled in the undergraduate colleges and schools are charged a student activities fee and thus become members of the UVM Student Association. Student Association serves as the all-campus student governing body. It assumes responsibility for voicing student concerns and interests in the political activities of the university community. S.A. also determines the recognition of student organizations on campus and the allocation of funds to a large number of student organizations. They provide publicity and supply services for their constituents, and assume a major role in all campus programming through their Concert Bureau, Film Bureau, and Speakers Bureau.

Each year S.A. holds elections for student senators who serve on S.A.'s standing committees. There are many opportunities for other students, as appointed by S.A., to serve on various university ad hoc committees throughout the year or work on the variety of programs S.A. involves itself with each year.

INTER-RESIDENCE ASSOCIATION (IRA)

The Inter-Residence Association is a government which represents the students living in University residence halls. The government, consisting of an executive board, legislative council, and judicial board, provides leadership for residence hall students, representing their interests to other constituencies within the University community. IRA involves itself in all aspects of residence hall life, constantly seeking new ideas and avenues for the manifestation of these ideas to make the residence halls meet the needs of its residents.

FRATERNITIES AND SORORITIES

The Greek System is an active and viable part of student life. It has long been acknowledged as an integral part of the social and extracurricular life on campus. The governing body of the system is the Greek Coordinating Council. The GCC performs two vital functions for the collective. It serves as a vehicle for communication between houses and assumes responsibility for conveying Greek interests and concerns to the University. The Dean of Students, through the Office of Student Activities, works with fraternities and sororities to accomplish those goals established in the best interest of the Greek and University communities.
The houses are private corporations and thus are treated so by the university excepting those situations having a direct effect on the university community as a whole.

The Fraternity Managers Association, 656-2066, offers a professional fiscal management service to each of the Greek houses. The office is maintained in Billings Center on the balcony level.

The following are active chapters of national and local fraternities: Acacia, Alpha Epsilon Pi, Alpha Gamma Rho, Alpha Tau Omega, Delta Psi, Kappa Sigma, Lambda Iota, Phi Delta Theta, Phi Gamma Delta, Phi Mu Delta, Sigma Alpha Epsilon, Sigma Nu, Sigma Phi, Sigma Phi Epsilon, and Theta Chi. Chapters of the following national sororities are represented: Alpha Chi Omega, Alpha Delta Pi, Delta Delta Delta, Kappa Alpha Theta, and Pi Beta Phi.

ATHLETICS, CLUB SPORTS, INTRAMURALS & RECREATION

The University encourages and supports a variety of sports at a variety of participatory levels. The demands on the recreational facilities are great but that is due to the variety of athletic interests within the university community.

A program of intercollegiate competition for men is maintained in basketball, crosscountry, golf, hockey, indoor track, sailing, soccer, swimming, tennis, track. The athletic policies of the University are under the recommendation of the Athletic Council, composed of members of the faculty, the student body, and alumni. Athletic relations are maintained with colleges and universities in New England and the eastern seaboard. The University is a member of the "Yankee Conference", which is composed of the State Universities in New England, of the National Collegiate Athletic Association, the New England Intercollegiate Athletic Association, and the Eastern College Athletic Conference.

The Women's Intercollegiate program offers a variety of team and individual activities which are open to all full-time female students of the University. Intercollegiate competition is on the local and regional level under the auspices of the Eastern Association for Intercollegiate Athletics for Women, the Women's Eastern Intercollegiate Ski Association and the United States Field Hockey Association. Varsity teams included in the program are as follows: Field Hockey, Soccer, Tennis, Volleyball, Basketball, Swimming, Synchronized Swimming, Gymnastics, Skiing, Lacrosse and Softball.

There are a number of club sports actively participating locally and regionally. These include the Baseball Club, Lacrosse Club, Gymnastics Club, Judo Club, Rugby Club, Ski Club (snow), Ski Club (water), Volleyball Club, Women's Ice Hockey Club, and the Wrestling Club.

The program of Physical Education offers an excellent program of intramural sports which provides for voluntary participation by students in all classes. Competition in nineteen different sports activities is ar-
ranged among fraternities, sororities, residence halls, independent
groups, and individuals.

The facilities of Patrick Gymnasium are available at various times
during the week for recreational free play in a wide variety of sports
activities.

STUDENT PUBLICATIONS

The opportunity for journalistic, literary, and editorial expression is
open to students interested in membership on one of the three major
student publication staffs: the newspaper, Vermont Cynic, published
weekly; the literary magazine, the News and Weather; and the yearbook,
the Ariel. These publications have all made unique contributions to the
life of the campus. Students need not be "professionals" to become
involved in any aspect of the production of these publications. The only
requirement is a commitment of interest, time and effort.

The Cynic and Ariel both have offices located in the downstairs of
Billings Center. The News and Weather has an office located on the
balcony in Billings.

RADIO

There are two student operated radio stations on campus. WRUV-AM
has been broadcasting primarily to the campus since 1954. WRUV-FM
began operation as a 100 watt educational station in 1965. Both stations
are S.A. recognized organizations and as such are student operated and
programmed, offering full radio media services to the university com­

munity. These stations operate at a professional level although they do
have the informal atmosphere associated with a student organization.
Any undergraduate interested in having a radio show or being involved
in the stations' operations should drop by the stations located at
Pomeroy Hall.

DRAMA AND DEBATE

The Royall Tyler Theatre is the home for the Season of Plays pre­

sented each year by the Department of Communication and Theatre
with the University players, as well as the home for the annual Cham­
plain Shakespeare Festival. The great periods of Theatre history are
covered during the course of four years in the Major Play Series. Work­
shop productions of original and experimental theatre forms are also
produced as part of the regular course work in Theatre as well as by
students and faculty outside of the regularly scheduled course offerings.
The Departments of Music, Communication and Theatre, and Women's
Physical Education collaborate periodically to produce a musical
comedy or opera. Participation in drama activities is open to all members
of the University.

The Lawrence Debate and Discussion Club provides opportunities for
participation in all types of forensic activities — debate, discussion,
oratory, after-dinner, and extemporaneous speaking. Members of the club appear before service clubs, farm organizations, high schools, and other groups throughout the state. The members of the club participate in more than three hundred intercollegiate debates annually, with the beginners getting as extensive an experience as the veterans. The club travels to various discussion programs and to outstanding tournaments in the East. Outstanding performers receive recognition by election to Delta Sigma Rho-Tau Kappa Alpha, the national honorary forensic fraternity.

MUSICAL ACTIVITIES

Opportunities for participation and appreciation are provided for students with strong musical interests. The University Band, the University Choir and the Choral Union, the University Madrigal Singers, and the University Orchestra appear in public presentations many times during the year. An opera or musical show is generally presented each year and faculty, senior, and monthly department recitals are scheduled throughout the year.

The University Band appears at athletic events, presents formal concerts, and makes a spring concert tour. The University Choir and the Choral Union give three annual concerts and the Madrigal Singers sing for various groups around the state. The University Orchestra presents two annual concerts, assists the Choir in a third, and plays for musical productions.

The Music Department has acquired a new Music Building, located behind Redstone and Southwick. The building houses the offices of the department as well as a beautiful recital hall accommodating one of the finest organs in the Northeast. The new facility serves as a showcase for the musical talents of the department and its students, as well as those students seeking musical activity as a part of their extracurricular life on campus.

THE GEORGE BISHOP LANE ARTISTS SERIES

The George Bishop Lane Artists Series is one of the major collegiate artists series in the country, inaugurated in 1955 by a gift from the late Mrs. Lane, in honor of her husband, George Bishop Lane of the Class of 1883.

The Lane Series brings to the campus and community a continuing program of musical, theatrical, dance and other artistic productions.

The Series is planned and produced by a student-faculty committee, with townspeople serving with student and faculty members on an advisory committee.

The Lane Series has presented many of the world's finest artists, including the London Philharmonia, the Vienna Philharmonic, the Philadelphia Orchestra, the Cleveland Orchestra, the Chicago Symphony
Orchestra, the Moscow Philharmonic Orchestra with David Oistrakh, the Royal Ballet of London, the American Ballet Theatre, Rudolph Serkin, Artur Rubinstein, Van Cliburn, Isaac Stern, Nathan Milstein, Andres Segovia, The Vienna Choir Boys, the Weavers, the Robert Shaw Chorale, the Budapest String Quartet, Dave Brubeck, Errol Garner, Benny Goodman, Victor Borge, Al Hirt, Mantovani, Harry Belafonte, Joan Baez, Maurice Chevalier, Bill Cosby, Ella Fitzgerald, Henry Mancini, Sir John Gielgud, Roberta Peters, the New York City Opera Company, the Metropolitan National Opera Company, the D'Oyly Carte Opera Company, and a number of plays including Tea and Sympathy, Li'l Abner, Camelot, Man for All Seasons, Look Homeward, Angel, J. B., Hello, Dolly!, Hair, Jesus Christ Superstar, Robert Merrill, George Solti (conducting the Chicago Symphony Orchestra), Lily Tomlin, Mary Travers, Godspell, and Applause.

In addition to the major series, The Lane Series offers during each academic year several youth concerts, special events and film series, and is also one of the co-sponsors of the Vermont Mozart Festival.

THE ROBERT HULL FLEMING MUSEUM

The Fleming Museum houses a distinguished teaching collection of art and ethnography. Originally founded as the Park Gallery in 1873, the collection owes much of its growth to the generosity of alumni and other friends. The O.B. Read American Plains Indian collection and the David B. Pitman '32 and Henry Schnakenberg collections of American art are notable examples. A spacious Marble Court is devoted to European art. Rotating exhibits drawn from the collections are arranged in surrounding galleries given to Ancient, Oriental, Ethnographic, and American art. Changing exhibitions occur monthly. Frequently they are organized by faculty and students in Museum Studies, Art History or Studio Art.

Lectures, gallery talks, recitals, films, and children's tours serve the community at large; activities supported by the Museum Association, whose membership is open to all. A center for the study of Art History and Museology, the Museum houses the Art Department collection of 75,000 slides and photographs, audio-visual class and seminar rooms, as well as a reference library for Museum research.

RELIGIOUS LIFE

The Religious Counselors Association is a Federation of the leaders of the following religious communities on the University of Vermont campus:

B'nai B'rith Hillel Foundation
Christian Scientists
Cunningham Newman Center  
Episcopal Church (St. Anselms)  
Protestant Ministry

Though we have diverse religious traditions and ministries, we share a common goal: the welfare of the university community. Separately and together, we are working toward the goal, by cooperating, sharing, and avoiding duplication of effort, wherever possible, in order to meet the needs of the university community.

Students desiring information on any of these groups should contact members of RCA. Father Norman Nadeau, Professor Harry Kahn, and Rev. Nancy Allen may all be contacted through the Cunningham Newman Center at 862-8403.

Students seeking information on other religious groups on campus should contact the Office of Student Activities at Billings Center, 656-2060 or the Student Association Office, 656-2053.

**HONORARY AND RECOGNITION SOCIETIES**

Honorary and recognition societies exist on the University of Vermont campus to recognize student contributions to the university community and student leadership in campus life. There are a few local societies, i.e., Boulder Society, that acknowledge individuals by class.

National Honorary Societies represented on the University of Vermont campus include:

The Phi Beta Kappa Society established the Vermont Alpha Center at the University in 1848 and initiates are chosen primarily on the basis of high scholastic standing, with emphasis on a broad distribution of liberal studies, including language and literature. The local chapter was the first in Phi Beta Kappa to initiate women into membership.

Mortar Board is a national honorary society for senior women and men. Although membership in Mortar Board comes as a high honor for a University of Vermont student in recognition of outstanding service, scholarship, and leadership, it is also a challenge for continued sound and honest scholarship, and for unselfish service in the best interests of the college campus.

The Society of the Sigma Xi, established at the University in 1945, initiates those who have proved their ability to do research in one of the sciences including students who have a high scholastic standing.

Other national honorary societies include: Alpha Omega Alpha, medicine; Alpha Zeta, agriculture; Kappa Delta Pi, education; Tau Beta Pi, engineering; Omicron Nu, home economics; Delta Sigma Rho-Tau Kappa Alpha, debating; Sigma Phi Alpha, dental hygiene; National Collegiate Players, dramatics; and Alpha Lambda Delta, freshman women’s scholastic; Ethan Allen Rifles, outstanding students in the Reserve Officers Training Corps; Pershing Rifles, a military fraternity.
Housing

Full-time undergraduate students may live in University residence halls. Upperclass students who are actives or pledges of a fraternity or a sorority may register for University residence hall housing or chapter housing. All freshmen students, except those living at home and commuting, or those living with their spouse, must live in University housing.

RESIDENCE HALLS

Contracts for room and board are binding for the college year unless cancelled for due cause with the sanction of the Office of Residential Life. In August, each new student will receive notification of a housing assignment and the date and hour of the opening of his/her residence hall. Rooms may not be occupied until the date specified. Each student is expected to leave the residence hall not later than twenty-four hours after his/her last examination at the close of each semester.

Facilities for doing personal laundry are provided in residence areas as well as space for storage during the academic year of trunks, baggage, bicycles and skis. Students provide their own bed linen, towels, window draperies, pillows, metal wastebaskets, bureau covers, desk lamps and reading lamps. All students living in the residence halls must have board contracts.

In order to facilitate maximum educational growth from the residence hall experience, a diversity of residence halls and programs are offered. There are freshman halls, upperclass halls, an environmental hall, a French house, and the Living and Learning Center (additional information on the Living and Learning Center is on page 135). Each residence hall is under the guidance and direction of a Hall Advisor who is a member of the Student Personnel Staff. In addition, the Hall Advisor is assisted by specially selected undergraduate Resident Assistants. These staff members encourage the development of intellectual, social and cultural programs and assist the residents in their growth toward maturity and responsible self direction. Each student in the residence halls is a member of his residence hall student government organization which represents student opinion and provides educational and social programs for its constituents.

FRATERNITIES AND SORORITIES

Chapters of Greek letter fraternities and sororities have long been recognized as part of the intellectual, social, and extracurricular life on the campus. These groups provide valuable experience for their members in the form of interfraternity athletic competition, dances, service projects, house operations, meal service, and educational programs. Fraternities and sororities are under the jurisdiction of the Dean of Students Office. Greek activities are coordinated by the Greek Coordina-
MARRIED STUDENT APARTMENTS
Located just outside Winooski, on Route 15 at historic Fort Ethan Allen, the University’s Married Student Apartments, known as County Apartments, are a four-mile drive from the main campus. Built in 1969, the development consists of 89 apartments located in eleven two-story buildings. There are 56 garden apartments (42 two-bedroom and 14 one-bedroom) and 33 town house apartments (all two bedroom). A centrally located service building contains laundry facilities and a multi-purpose community room. Within the complex are three ample parking areas.

Each apartment is furnished with an electric stove, refrigerator, and water heater, kitchen cabinets and shelves, garbage disposal, and wall-to-wall carpeting. Every apartment has a private entrance and mailboxes are provided. The apartments are heated electrically and each room is individually controlled.

Detailed rental information may be obtained from the Director of Family Housing, 600 Dalton Drive, Winooski, VT 05404.

OFF-CAMPUS HOUSING
University students eligible to live off-campus may utilize the facilities of the Residential Life Office in locating suitable housing in the greater Burlington area. This office provides a free listing service by which community landlords and rental agents are able to make known their housing availability to those persons associated with the University.

Students may examine up-to-date listings for available apartments, houses, and rooms at the Billings Student Center or on a bulletin board just off the College Street entrance of Waterman Building on the main campus. The University is not responsible for the approval of off-campus housing facilities. It is impractical to send information concerning individual listings by mail. A catalogue of available listings is issued each May, August, and December.

To reserve a catalogue, contact the Office of Residential Life, 25 Colchester Avenue, Burlington, VT 05401.

University Health Services
The University Health Services is located at 284 East Avenue where it remains open constantly. Each student who has paid the Health Services Fee is entitled to such routine medical care as is needed and the Health Services can render during the academic year. Two days of no-cost In-Patient care are granted. Beyond two days, the student will be charged $25.00 per day for In-Patient care. Most resources for main-
tenance of emotional and physical health are available here. Provision is made for In-Patient care, for gynecological, medical, surgical, orthopedic, and short term psychiatric cases. Problems requiring prolonged and sophisticated care may be treated at the Medical Center Hospital of Vermont, or when feasible, at a hospital nearer the student’s home. Long term psychiatric care is to be accomplished through a local psychiatrist outside the Health Services and at the student’s expense.

Athletic pre-participation physical examinations and care of athletes is supervised by Health Service Physicians and Trainers. The two Trainers are registered Physical Therapists supported by Student Trainers, administering their care at the University Health Center and the Patrick Gymnasium Training Room. Student Trainers are selected by the Trainers and approved by the Director of the Health Services since they are compensated by the Health Services.

The University Health Services is staffed by a Director, three full-time physicians, with consultants in most specialty areas from the University College of Medicine. The nursing staff is made up of an Administrative Supervisor with ten Registered Staff Nurses. A receptionist, two secretaries, a part-time maid, and a custodian complete our staff. The University Health Center is open at all times. During the weekday physicians are in attendance from 8 a.m. to 5 p.m. with one doctor on call in rotation for nights, weekends, and holidays for emergencies.

The University Rescue Squad is housed at the Health Center. This is a student financed, originated, operated, and staffed group of Emergency Medical Technicians and others. Their primary area of service is to the University students, faculty, and staff in emergencies and transport. They service as “back up” to the Burlington Fire Department Rescue Squad as well as to other area Rescue Squads. They are a tax free group, completely volunteer. Arrangements have been made for certain of their personnel to have summer and vacation employment at the University Food Service.

Regular Gynecological Clinic sessions are held at the University Health Services four half days per week and attendance is by appointment. Similarly, Orthopedic Clinic is held two half days per week and is also by appointment. The Psychiatrist is here all day Monday, Tuesday, in the afternoon, and all day Thursday with back up at the other times from the Crisis Clinic at the Medical Center Hospital of Vermont.

Full-time Laboratory Technician is in attendance weekdays for routine studies. The Radiology service is available on weekdays with Technologists from the faculty of the School of Radiological Technology at the College of Medicine. Evening and weekend laboratory and x-ray needs will be met at the Medical Center Hospital of Vermont.

Medical excuses from class activities due to illness and injury must be
administered by the University Health Services. Students treated by home town physicians must have a note from that physician to the Health Service to accomplish this necessary excuse or if treated by a Burlington physician the same procedure must be followed.
Admissions to the University
Applications and Deadlines

The University of Vermont welcomes applications from all interested students regardless of race, religion, nationality, or sex. Prospective freshmen and transfer students interested in applying for admission in either January or September can receive applications by writing to: Office of Admissions, University of Vermont, 194 South Prospect Street, Burlington, Vermont 05401. Applications for admission in January should be received in the Admissions Office by December 1, while applications for admission in September should be on file and complete by February 1 (April 1 for transfer applicants). Upon filing an application all candidates are required to pay a non-refundable $20 application fee which is used to meet the cost of processing the application.

Early Notification for Vermont Students

An early notification program is available for prospective freshmen who are Vermont residents (see residency rules, page 47). Vermonters applying under this program will be notified concerning admission during the first week of December if the application, high school transcript, SAT scores and recommendations have been received by November 1. Students who receive offers of admission under this program will have until May 1 to respond.

Admissions Criteria

Qualification for admission is determined on the basis of the secondary school record, rank in graduating class, recommendations, and College Entrance Examination Board Scholastic Aptitude and Achievement Test results. Each application is carefully reviewed by the Admissions Office staff and in many cases by the College or School to which the student is applying. The candidate’s record is thoroughly examined in order to determine whether the student has adequately prepared for the academic program of his choice.

Sons and daughters of alumni of the University of Vermont are encouraged to apply and are given special consideration. Increasing competition means that the University must evaluate the application of each alumni son or daughter in terms of the total number of applications, their relative qualifications, and the limitation which must be placed on the number of applicants who may be offered admission to the various academic programs which are available.

26
Most prospective freshmen present at least 16 high school units, including a minimum of four years of English, two years of mathematics, two years of a foreign language, two years of science, and two years of social sciences.

The two years of mathematics should be one year of algebra and one year of geometry. Students who plan to specialize in engineering, forestry, mathematics and science should present both a second year of algebra and a course in trigonometry for a total of four years of mathematics. For students planning to major in nursing or an allied health science, high school courses in biology, chemistry, and physics are highly recommended. Students planning to major in physical therapy should present one year of high school physics as one of their lab science courses.

Exceptionally qualified students may in some instances be admitted even though they do not meet the above requirements in full.

Additional courses in mathematics, history, science, the fine arts and music, and a third year in the foreign language are strongly recommended as desirable preparation for college. In evaluating the secondary school record, careful attention is given to the course load a student has been carrying and any advanced work is given special consideration. A student planning to major in music must arrange for an audition and interview with the chairman of the department during the year preceding entrance.

Interviews and Visits

The University differs from a number of other colleges in not requiring a personal interview. Students are encouraged to visit the campus to form their own first-hand impressions about the University. Prospective students may schedule an appointment with a current UVM student or a staff member on most weekdays during the academic year in order to gain information about the academic and non-academic aspects of undergraduate life.

On most Saturday mornings while the University is in session, information group sessions will be held on campus for interested students and parents. Students should write or call the Admissions Office (802-656-3370) for additional information about the group meetings or individual appointments.

New England Regional Student Program

The University of Vermont is an active participant with the Universities of Connecticut, Maine, Massachusetts, New Hampshire, and Rhode Island; and with Lowell University, Southeastern Massachusetts University and the public four-year and two-year colleges and technical
institutes in a program of regional cooperation aimed at increasing educational opportunities for qualified young men and women of the New England states. Under the program, New England residents are given resident tuition privileges in certain specialized curricula which are not offered by public institutions in their home state. A brochure detailing these specialized curricula, has been prepared by the New England Board of Higher Education and is available through the Board, 40 Grove Street, Wellesley, Mass. 02181.

The University of Vermont offers the following programs in which the Vermont in-state tuition rate is available for students from the states named.

| REGIONAL PROGRAMS OFFERED BY THE UNIVERSITY OF VERMONT TO STUDENTS FROM |
|-----------------------------|---|---|---|---|---|
| Canadian Area Studies      | X     | X   | X     | X    | X   |

*Two-year program

Types of Enrollment

DEGREE STUDENTS — Students who have presented appropriate credentials for admission and have been accepted as students in a degree program.

NON-DEGREE STUDENTS — Students who have presented minimum credentials and are permitted to undertake limited course work (up to six credit hours per semester) for a purpose other than the earning of a degree (see chapter on Continuing Education).

UNDERGRADUATE — Non-degree Students, those seeking only undergraduate credit for course work taken, enroll through the Division of Continuing Education.

GRADUATE — Non-degree Students, those who have at least a bachelors degree at the time of enrollment, enroll through the Graduate College.

College Entrance Examinations

The College Entrance Examination Board will administer a series of scholastic aptitude and achievement tests during 1976-77. Complete information may be obtained from the College Entrance Examination Board, P.O. Box 592, Princeton, New Jersey 08540.

Transferring to the University

Students interested in transferring to the University may apply for
admission to the Fall or Spring semester. Applications for mid-year admission should be filed by December 1. Applications for Fall transfer should be complete by April 1. Transfer candidates should see that official transcripts of their high school and college records are sent to the Office of Admissions in time for prompt consideration. A transfer applicant may not disregard the record of any previous education received at another institution.

A student who transfers to the University from another accredited college or university may be given provisional credit for all courses satisfactorily completed, provided that similar courses are counted toward graduation at the University of Vermont. Transfer credit is not allowed for work completed with grade "D" or its equivalent, unless a more advanced course in the same subject has been passed with a higher grade in the institution from which the student transfers. Please note: GRADES do NOT transfer. The quality point average of transfer students is computed on the work taken at the University of Vermont only.

The credit is provisional, pending satisfactory completion of a semester's work at the University. The provisional transfer credits are fully granted if the student is in good standing at the end of the first semester.

Advanced Placement and Advanced Credit

The University of Vermont Welcomes applications from high school students who have taken college level courses offered in their high schools under the Advanced Placement Program of the College Entrance Examination Board. Scores of three or higher on advanced placement examinations are awarded appropriate credit by the Registrar. Test scores of two will be evaluated by the department in order to determine whether credit should be granted.

A student who has been granted Advanced Placement may, upon the recommendation of the department and the student's academic dean, use his Advanced Placement to satisfy distribution requirements for his concentration.

Students who received Advanced Placement may also receive course credit toward graduation requirements, upon approval of the department and the student's academic dean.

Credit by Examination

A degree student who wishes to do so may, under the following conditions, receive credit for a course by taking a special examination and paying the special examination fee charge of $10 per credit hour.

A request for such an examination must be made in writing at least one month before the date of the examination, and it must be approved
by the student’s advisor, the chairman of the department in which the course is given, and the academic dean, in that sequence. The student must neither have audited, previously received a grade, nor have attempted a prior special examination in this course at the University of Vermont or at any other institution of higher education. Upon passing the special examination, as determined by the examiner and the chairman of the department in which the course is given, the student receives credit, but not a grade, for the course. Credit by examination forms are available in the Office of the Registrar.

College Level Examination Program

The University of Vermont will grant credit on passing the College Level Examination Program (CLEP) General Examinations at the 50th percentile or better based on the sophomore norms (for those examinations which the relevant UVM departments have determined to be satisfactory. Departments may supplement CLEP results with their own examinations). The credit awarded will not exceed six (6) hours in each of five examinations for a total of thirty (30) hours. These credits may be applied toward distribution requirements and to the total hours specified for a particular degree program. No grade will be awarded and the number of credit hours will not be considered in determining cumulative average.

The University may grant credit for certain CLEP subject examinations if a student attains a minimum score equal to a grade of B on such examination. Credit will not be allowed for a CLEP subject examination if advanced courses in that discipline have been taken previously.

Pass-No Pass Option

Degree students, starting with the sophomore year, may elect to take certain of their courses on a pass-no pass option, with approval of their advisor. Please see page 40 for additional details.

Credit for Military Service

A veteran who has been accepted into a degree program may, upon presentation of DD Form 214, Report of Transfer or Discharge, receive certain credit for this experience in those Colleges in which credit for military science is allowed. If the student has completed more than one year of military service, up to twelve hours of credit may likewise be accepted. In addition, the individual will be exempt from the physical education requirement.
The University accepts all college level credits earned through the United States Armed Forces Institute providing that credit is applicable to the degree program and, in addition, credit is granted for service schools completed, as recommended by the American Council on Education.

Orientation Program

Orientation at the University of Vermont is an on-going process beginning with admissions acceptance and continuing throughout a several day on-campus academic and social experience and on into the semester when activities and on-going academic events occur.

Entering students are required to take the College Entrance Examination Board Achievement Tests in mathematics and modern foreign language in all cases where these subjects are to be continued in the student’s curriculum. It is recommended that students who expect to continue with biology take the College Entrance Examination Board Achievement Test in biology. The scores on all tests are used in advising students regarding the course of study and the selection of courses. Following acceptance, students must submit a statement of medical history and a physical examination record to the University Health Service. New students are also required to come to the campus for continuing orientation. Schedules and dates of these meetings are mailed in late Spring.

Senior Citizens

“Citizens of the state of Vermont, sixty-five years and older, upon presentation of proof of residence and age are permitted to enroll for credit or audit in classes at the University without payment of tuition fees.”

In each of these instances, such enrollment must have permission of the Dean of the College concerned or in the case of Evening Division and Summer Session, permission of the Dean of Continuing Education, in order to safeguard overcrowding of any one class to the detriment of the regularly marticulated students.
Student Expenses

The student expenses outlined in the following paragraphs are anticipated charges only for the academic year 1976-77. Changing costs may require adjustments of these charges before the beginning of the Fall semester.

Undergraduate Tuition and Fees

APPLICATION FEE
A non-refundable application fee of $20 is charged each applicant for admission to a University degree program.

ORIENTATION FEE AND ADVANCED TUITION PAYMENT
All new undergraduate applicants who have been accepted by the University are required to pay $175 in order to reserve a place in the next enrolling class. Students accepted for the Fall semester must pay the deposit by May 1, while students accepted for the Spring semester must pay the deposit not later than January 7. Of this amount, $25 is used to cover the cost of the orientation program which is a requirement for all incoming undergraduate degree students. The remaining $150 will be applied to the initial semester's tuition bill.

If a newly admitted student who has paid the required deposit subsequently chooses not to attend the University, the student will receive a $100 refund if the University is notified in writing prior to the beginning of the semester for which the student was admitted. If the University is notified after the beginning of the semester, the entire deposit is forfeited.

ESTIMATED YEARLY EXPENSES
Listed below are the estimated expenses (excluding transportation, laundry and spending money), based on the regular tuition for undergraduate students followed by an explanation of these charges.

32
TUITION

Vermont Residents: $50 per credit hour through 11.5 hours. From 12-18 credit hours — $600 per semester plus $50 per credit hour for each hour in excess of 18 hours.

Non-Residents: $135 per credit hour through 11.5 hours. From 12-18 credit hours — $1,615 per semester plus $135 per credit hour for each hour in excess of 18 hours.

Note: Courses taken for audit are also included in determining the number of credit hours for which a student is billed.

HOUSING CHARGES

Room and Board: All housing contracts include both room and board and are legally binding for the nine-month academic year. Each occupant is liable for the yearly rental, one half to be paid each semester. The room charge per person is $812 per year for multiple occupancy. A single room is $872. Depending on vacancies, a limited number of large singles may be available at the rate of $1,012 a year.

The base University meal plan is $680 yearly, one half to be paid each semester. Although the number of coupons in the basic plan does not cover every meal during the semester, many students find the plan sufficient. Additional coupons may be purchased to meet individual needs at a cost of $56.10 per book. Coupons may be used not only in University dining halls but in the various campus snack bars, restaurants and grocery stores. Questions regarding food services should be directed to the SAGA Food Service Office, Waterman Building.

A written request is required of any student wishing to cancel a housing contract. Any student cancelling a housing contract after July 1 but before the beginning of the Fall semester will be assessed a $50 penalty. Unless specifically authorized by the Office of Residential Life, no room cancellations will be honored after the beginning of the Fall semester.

Residence halls are closed during semester break and spring recess. Temporary room provisions for students may be made for exceptional cases at a nominal charge. Housing will be provided during Thanksgiving recess at no additional charge, but students will be required to consolidate due to security problems, energy conservation, and limited staff coverage.

KEY DEPOSIT

A room key deposit of $5 per year is required and is returned upon the surrender of the key. This deposit will be added to room charges on the student's bill.

INTER-RESIDENCE ASSOCIATION (IRA) FEE

A $6 per year ($3 per semester) fee is charged to each resident to be used for activities within the residence hall system.

LIBRARY BOND FEE

A library bond fee of $30 per year ($15 per semester) is charged to all students enrolled for twelve hours or more except those registered in the College of Medicine. Students enrolled in less than twelve hours but more than three hours will be charged a fee of $15 per year ($7.50 per semester). Students enrolled in three hours or less per semester are not subject to the library fee. This fee is assessed by legislative act and turned over to the State of Vermont each year to the extent necessary to retire the bond issue that was used to fund the construction of Bailey Library.
ATHLETIC BOND FEE

An athletic bond fee of $30 per year ($15 per semester) is charged to all students enrolled for twelve hours or more. This fee is assessed by legislative act and turned over to the State of Vermont each year to the extent necessary to retire the bond issue that was used to fund the construction of Patrick Gymnasium, Forbush Pool and Gutterson Field House.

STUDENT HEALTH SERVICE FEE

A fee of $64 per year ($32 per semester) is charged to all students enrolled for twelve hours or more. Part-time students will be eligible for Health Services by paying this fee. *Student Accident and Sickness Insurance* — Through an arrangement with a commercial insurance company, students are able to procure health insurance which is designed to provide coverage for services beyond those provided by the Student Health Service. The present cost for one year's coverage is $29. Married students may procure coverage for their spouse and children. Further details may be obtained from the Infirmary. In order to participate in this insurance, the Student Health Service fee must be paid each semester.

STUDENT ASSOCIATION FEE

Undergraduate degree students enrolled for twelve or more hours are charged a fee of $24 per year ($12 per semester). This fee is allocated by the Student Association toward the support of student organizations and student activities.

BOOKS AND SUPPLIES

The estimated cost of books and supplies at $150 is a low average. Some particular curricula may require one-time purchases which will change this amount.

- Engineering students, add about $50 for instruments.
- Dental Hygiene students, add about $465.
- Students in the Professional Nursing Program, add about $85 for uniforms and special equipment prior to the beginning of clinical nursing courses in the Junior year.
- Students in the Technical Nursing Program, add about $75 at the time of Freshman registration.

OPTIONAL FEES

*Vermont Public Interest Research Group*

In response to a student referendum, the University has agreed to bill each undergraduate degree student a special optional fee of $6 per year ($3 per semester). Funds collected help support the activities of the Vermont Public Interest Research Group.

*Locker-Towel Fee*

All students enrolled in physical education activity courses and others who wish to have an assigned locker must pay a $4 locker-towel fee each year or any portion thereof. This fee provides a lock and a clean towel after each use of the gymnasium facility.

UNIQUE FEES

*Credit by Examination*

A fee of $10 per credit hour will be charged for administration of special tests in areas for which academic credit may be received.
Fees for Courses in Music Performance Study

Private lessons are approximately one half hour in length with fifteen sessions being given each semester. $60 per credit hour will be charged each student for such a course. This is in addition to the tuition charged and will be billed separately during the course of the semester.

School of Natural Resources Summer Programs

The tuition for the School of Natural Resources Summer Programs will be at the Summer session credit hour rate. In addition, there may be charges for transportation. This program is open only to Forestry, Recreation Management and Wildlife Biology Majors.

Technical Nursing Summer Program

This is a mandatory four week summer program scheduled for the month of June which is exclusively for students who have completed the first two semesters of the Technical Nursing Program. The tuition for the Summer session will be at the Summer session credit hour rate. University housing and food service are available for those who desire it.

Late Registration Fee

Students who are allowed to register after classes begin will be charged a $10 late registration fee.

Graduate Student Tuition and Fees

APPLICATION FEE

All applications for admission must be accompanied by a $15 application fee. This is non-refundable.

TUITION

Rates for the academic year 1976-77 will be as follows:

- Vermont Residents: $50 per credit hour, $600 flat rate for 12 hours, and $50 per credit hour in excess of 12 hours.
- Non-Residents: $135 per credit hour, $1,615 flat rate for 12 hours, and $135 per credit hour in excess of 12 hours.

NOTE: Courses taken for audit are always included in determining the number of credit hours for which a student is billed.

HOUSING

The University provides no housing for single graduate students. These students have traditionally found suitable housing in the greater Burlington area. A limited number of University owned apartments are available for married students. Rental information may be obtained from the Office of Family Housing, 600 Dalton Drive, Winooski, VT 05404.

LIBRARY BOND FEE, ATHLETIC BOND FEE, AND STUDENT HEALTH FEE

See page 32 under listing of Undergraduate Expenses.

COMPLETION OF THESIS FEE

A fee of $25 per semester is charged each graduate student who has already paid tuition for all credits required in his degree program but who has not completed or defended his thesis.
ADVANCED DEGREE FEE

A fee is charged to each recipient of an advanced degree according to the following schedule: Ph.D. $25; Master Degree (with thesis) $20; Masters Degree (no thesis) $10.

This fee must be paid prior to the last date established for submission of theses in each of the three graduation periods.

It is the responsibility of the degree candidate to pay the appropriate account at the Cashier’s Office and present the receipt to the Graduate College Dean in order to have a degree awarded.

Medical Student Tuition and Fees

APPLICATION FEE

Application is made only through the American Medical College Application Service. An additional application fee of $20 is due the University of Vermont on request.

TUITION

Vermont Residents: $900 per semester; $1,800 per academic year.
Non-Residents: $1,915 per semester; $3,830 per academic year.*

*Residents of Maine, Massachusetts, New York and Rhode Island will be assessed tuition based on the cost of medical education and according to contractual agreements between those particular states and the University of Vermont. Interested students should request specific information from the College of Medicine’s Office of Admissions, or from their own state legislature’s Office of Education.

All tuition is subject to an increase of from $100 to $400 dependent on Federal capitation payments.

ATHLETIC BOND FEE AND STUDENT HEALTH FEE

See page 32 under listing of Undergraduate Expenses.

ACTIVITY FEE

All students in the College of Medicine are charged a student activity fee of $10 per year ($5 per semester). This covers the cost of the medical yearbook and other student activities.

MICROSCOPE FEE

The microscope fee is assessed at the rate of $22 per trimester for first year medical students and $24 per semester for second year medical students.

Payment of Obligations

All tuition, fees, room and board charges are payable in full upon notification and not later than the first day of classes unless otherwise announced. Advanced payments are accepted; checks should be made payable to the University of Vermont.

Students who cannot meet their financial obligations because of unusual circumstances should contact the Accounting Office as soon as possible before the due date.

Any student who has not satisfactorily completed financial arrangements by the first day of classes will have his enrollment terminated.
The University reserves the right to withhold the academic record of any student who is in arrears in the payment of outstanding charges.

SENIOR CITIZENS

Vermont residents who are over sixty-five years of age may enroll for courses for credit or non-credit, without tuition charges, on a space available basis.

LATE PAYMENT FEE

Students who are allowed a payment postponement of all or a portion of their financial obligations will be charged a $10 late payment fee.

BUDGETED PAYMENT

The University has made arrangements with the Insured Tuition Payment Plan for those who desire to budget annual costs in monthly installments. Information about the various payment programs is sent to each incoming student. For advance information, please write to:

Richard C. Knight Insurance Agency In.
Insured Tuition Payment Plan
53 Beacon Street
Boston, Massachusetts 02108

FINANCIAL AID

Many worthy and deserving students are unable to meet college expenses and for them the University provides, so far as its resources permit, aid in the form of scholarships, loans, and employment. For further information see page 11.

Bill Adjustment

Bills will be adjusted at the end of the drop period and at mid-semester; and students will be held liable for the total number of credit hours enrolled in at those times. If a course is dropped after mid-semester, no refund will be made.

At the end of the semester, an audit will again be made of each student’s enrollment and if the number of courses, taken both for credit or audit, exceeds the number for which the student has been charged, a supplemental bill will be issued.

Tuition Refunds

CANCELATIONS

Returning students who notify their Academic Dean and the Registrar in writing before the semester begins that they will not be attending the University that semester, will receive a refund. The refund will include all monies paid to the University for that semester.

WITHDRAWAL, MEDICAL WITHDRAWAL, SUSPENSION, DISMISSAL, CHANGES IN CREDIT HOUR LOAD

A student who withdraws for personal or medical reasons, is suspended, is dismissed, or changes enrollment will receive a refund of tuition and fees in accordance with the following schedule:

- If the action occurs prior to the sixteenth day of classes, (end of drop/add period) the student will receive a 100% refund.
— If the action occurs from the sixteenth day of classes through mid-semester (as defined in the Schedule of Courses) the student will receive a 50% refund.
— No refund will be allowed after mid-semester.

DEATH
In the case of death of a student, tuition and fees paid for the semester during which the death occurs will be fully refunded.

REFUND OF OTHER CHARGES
Room and board payments will be refunded on a pro-rata basis.

*Note:* The effective date of any cancellation or withdrawal is the date your Dean/Director receives such notification in writing.

Only in very extenuating circumstances, your Dean/Director may recommend to the Registrar an exception be made to this refund policy.

In no case will a refund be made after the first day of classes of the following semester.

All medical withdrawals must be approved by the University Physician.

If a student receiving financial aid is eligible for a refund for any of the reasons listed, an appropriate portion of the refund will be returned to each aid source on a pro-rata basis according to the proportion each aid amount is to the student’s financial aid budget for the period for which the refund is being made.
General Information

This section offers a summary of regulations and procedures for registration, change of enrollment, grades and advisement. It also gives a brief explanation of withdrawal, leave of absence, readmission rules, undergraduate degree requirements and residency rules. The importance of these regulations and procedures cannot be underestimated.

REGISTRATION

Students in attendance must pre-register for the next semester at the designated time. Unless excused in advance by the dean of the college concerned, students that do not pre-register will be considered as dropped and may apply for readmission after one semester. Specific directions are published for each semester.

Written approval of the Student’s Dean is required to Pre-register for more than 18 credit hours.

ACADEMIC ADVISING

Effective Academic Advising involves an established rapport between student and teacher. Accordingly, each new student is assigned to a faculty advisor upon admission to the University. The student remains under the guidance of this advisor until a major has been selected, usually during the sophomore year at which time a departmental advisor will be assigned. Students with questions about academic planning should consult their advisor throughout the year and especially during the pre-registration period. To change academic advisors, students should contact the dean of their college. Each academic unit within the University maintains its own system for advising students.

ADVISING RESOURCES

In addition to an assigned faculty advisor, there are a variety of other advising resources offices available to University undergraduates. They are:

*The Advising Referral Center:* assists students who are undecided about their academic plans. The Center also helps students with complaints and grievances about course instructions, scheduling, and other academically related problems.

*Pre-Medical/Pre-Dental Advisor:* assists undergraduate students with the admissions requirements for dental and medical school. A library of resource materials is maintained which includes literature on alternative health careers, school catalogs, and pre-medical education journals.

*Pre-Law Advising:* the UVM Pre-Law committee assists students by providing meetings and panel discussions regarding career options in law. Advising also includes specific information on applying to law schools. A current collection of law school catalogs is maintained for interested students.

*Pre-Veterinary Advising:* is available to discuss plans for graduate school and employment in animal science career areas. A selection of catalogs, pamphlets, and other related literature is maintained.

*International Students and Scholars Advising:* verifies immigration status, interprets immigration laws, and immigration forms to foreign students, faculty, and scholars. American students planning to study abroad should also make their plans through this office.

*Minority Student Advising:* is an effort to meet the needs of students entering the University who demonstrate that additional support services are needed.
Incoming freshman minority students may elect to take part in a "Summer Enrichment Program" held on campus for a month (3 credits).

*Career Planning and Placement:* assists students who are exploring a variety of potential career options early in their academic careers. A library of career information and school catalogs is maintained.

*Veterans Affairs Advising:* advises students of their G.I. Bill benefits in educations. Counseling and referral on academic matters are available to veterans.

**CHANGE OF ENROLLMENT**

A student may add courses during the first week of classes and may drop courses without academic penalty during the first three weeks of classes. Any changes in enrollment after these periods must be authorized by the dean of the college in which the student is registered. Change of enrollment forms may be obtained from the Registrar's Office.

**PASS—NO PASS**

PASS—NO PASS course enrollments have been approved by the University Senate for implementation in September, 1968. The action was taken in two parts:

**FIRST,** that any degree program student, not on academic trial, be permitted to take as many as six courses (or as many courses as he has semesters remaining for future transfer students) during his undergraduate career on a Pass—No Pass basis, beginning in his Sophomore year. These courses may not include any required by the student's major department, either for the major or for the degree. Only free electives (without condition) may be taken as pass-no pass. This option may not be used for electives within the distribution requirements of a college or department. Students who have enrolled in ineligible distribution elective courses on a pass-no pass basis prior to September 1, 1974, shall not be penalized. The student must complete all work normally required in these courses and he will receive full credit toward graduation for passing them. The instructor will NOT be informed of the student's status and the Registrar will record grades of "D" or higher as PASS and grades of "F" as NO PASS. Neither "P" nor "NP" grades will affect the student's grade-point average.

**SECOND,** that the following addition was approved by the Faculty Senate in January, 1974: "Physical education (activity) courses, whether taken to fulfill a requirement or as electives, will be available to students on a pass-no pass basis and shall not be counted as part of the six (6) standard courses described above."

**Procedure—**

1. Obtain a PASS—NO PASS Request Form from the Registrar's Office and consult your academic advisor.
2. Obtain your advisor's endorsement that the request conforms to the policy established by the University Senate. Any question about a course or courses being appropriately elected as Pass—No Pass for a student will be resolved by the student's college dean.
3. Submit your request to be placed on Pass—No Pass status at the Registrar's Office during the first week of the semester. Requests to be removed from that status must be filed during the same period.

*Note:* Non-degree students cannot take courses on pass-no pass basis.

**AUDITING COURSES**

With the approval of the Dean and the instructor concerned, a regularly
enrolled student carrying a normal program may audit a course. Others who do not wish to receive credit, or who have not met admission requirements, may also register as auditors. Auditors have no claim on the time or service of the instructor and no grade credit is given for the work. Tuition is charged at the applicable rate. Under no circumstances will a change be made after the enrollment period to allow credit for courses audited.

The approval of the Dean of Evening Division and Summer Session is necessary for auditing courses in those divisions.

REPEATED COURSES

A student who repeats a course loses any previous credit on record for that course. The previous grade remains on the student’s permanent academic record and is included in computing his cumulative grade average.

ATTENDANCE

Class Attendance — Every student is expected to attend all regularly scheduled classes. This is a major responsibility of the student toward himself and toward the University. The primary penalty for non-attendance lies in the student’s lessened grasp of the subject matter of the course.

It is the responsibility of the student to inform the instructor regarding reason for absence from class.

Absence from Classes — Each department is to inform all students in its classes at the beginning of each semester of its policy for handling absences and the penalties that may be imposed.

Failure to do any work for which a grade is given, if due to unexcused absence, may result in a failing grade for that particular work.

TARDINESS

A student not present at the beginning of an exercise may be marked absent.

RIGHT OF APPEAL

Any student who believes that he has been unfairly treated in regard to absences may appeal to his academic dean.

PRIORITY OF UNIVERSITY EXERCISES

University academic responsibilities have priority over other campus events. Attendance at:

1. Regularly scheduled classes have priority over special scheduled common hour examinations.
2. Common hour examinations have priority over attendance at other activities.

FINAL EXAMINATIONS REGULATIONS

1. The examination period at the end of each semester is set by the official University calendar.
2. Semester examinations shall be given only during the regular examination period except by permission of the dean of the college on request of the chairman of the department. No examinations shall be given during the last week of the semester except lab exams given in courses with specific lab sections.
3. The time and place of each final examination are determined by the Registrar and a schedule is circulated and posted. Any change in the scheduled time or place may be requested by the chairman of the depart-
ment concerned, when conditions seem to warrant such special arrange-
ment. Decision on such requests rests with the Registrar.

4. In every course in which a final examination is given, every student shall
take the examination unless excused by the instructor.

5. A student who is absent from a final examination for any reason must
report that fact and the reason, in person or in writing, to his instructor
within twenty-four hours. If the absence is due to any situtation beyond
the reasonable control of the student, (e.g., illness or family tragedy) the
instructor must provide the student with the opportunity to complete the
course requirements. At the instructor’s discretion, this may be an exami-
nation or some other suitable project. The instructor may require evidence
in support of the student’s reason for absence.

6. If the absence is not reported as provided above, or is not excused by the
instructor, the examination is regarded as failed.

GRADES

Grades are reported and recorded as letter grades. Averages are calculated
from quality point equivalents.

A Excellent .................. 4 points per semester hour
B Good ...................... 3 points per semester hour
C Fair ....................... 2 points per semester hour
D Poor ...................... 1 point per semester hour
F Failure .................... 0 points per semester hour

Other grades are:
Au. Audit.
Inc. Incomplete. This grade applies to work of acceptable quality when the
full amount is not completed because of illness or other emergency. It
can be awarded only with the permission of the student’s college dean.
The dean may set the limit of time when the work of the course is to be
completed. In no case shall this time be set longer than the beginning of
the corresponding semester of the next academic year.
XC Extended Course. This grade is awarded at the end of the semester to a
student who is enrolled in an identified course, the nature of which
makes it unreasonable or impossible for the student to complete the re-
quired work within the regular semester.
NP Not Passed, not used in grade point average computation.
P Passed, not used in grade point average computation.
W Withdrawn, without penalty, not used in grade point average computation.
WF Withdrawn, failing. This grade is weighted as an “F” in the computa-
tion of grade point average.
M Missing — Grade Not turned in by the Instructor.

CLASS STANDING

The designation of a student’s class shall be determined by the number of
credits completed. The divisions are as follows:

Freshman ................. 0 — 29.9 credit hours
Sophomore ............... 30.0 — 59.9 credit hours
Junior .................. 60.0 — 89.0 credit hours
Senior .................. 90.0 and over credit hours

TRANSCRIPTS

Currently enrolled, as well as former undergraduate and graduate students,
may obtain an official transcript of their permanent academic record by writing
or telephoning the Office of the Registrar, 363 Waterman Building (802) 656-2045. The charge is $2 for each transcript.

Please allow a minimum of one week for normal processing, and three weeks following the end of a semester. The University reserves the right to withhold registration material and all information regarding the record of any student who is in arrears in the payment of fees or other charges, including student loans and dining and housing charges.

ACCESS TO RECORDS

Students have the right to review any of their educational records maintained by the University. Students also have the right to have all educational records maintained in a confidential manner. In appropriate situations, students may choose to waive some or all of these protections, but such waivers must be clearly stated in writing. If a student feels an educational record to be misleading, or containing information which is inaccurate, a hearing may be scheduled to seek appropriate modification. Requests for review of records should be made to the Registrar.

HONORS

The Bachelor's degree may be conferred with honors, by vote of the Senate, in recognition of general high standing in scholarship. Three grades are distinguished and indicated by inscribing on the diploma the words cum laude, magna cum laude, or summa cum laude.

Honors are determined in the following manner: Within the graduating class of each college or school, students in the top one percent will receive summa cum laude; the following three percent will receive magna cum laude; the next six percent will receive cum laude. The total number of honors awarded will not exceed ten percent of the graduating class of each school or college.

Honors will be calculated on all grades received at this university. In order to be eligible for consideration, a student must have taken at least sixty hours (thirty hours for two year programs) at this university in which a letter grade of A, B, C, D, or F has been awarded.

DEAN'S LIST

The deans of the undergraduate colleges publish at the beginning of each semester the names of those full-time students who stood in the top 20% of each class of their college during the preceding semester. Full-time enrollment in this case shall amount to a minimum of twelve-credit hours in courses in which grades of A, B, C, D or F have been given.

STUDENT LEAVE OF ABSENCE POLICY

A leave of absence means that a student who is eligible for continued enrollment ceases to be enrolled while in good standing and is guaranteed readmission. This policy benefits both the student and the University in that it enables a student to plan on readmission to the University and allows the University, by having records on the expected date of return of its students, to refine further the planning of the size of the student body. The following statements further define a leave of absence:

a. Upon application to his or her academic dean a student may be granted a leave of absence by that dean when that application merits the commitment of the University to insure the student's readmission.

b. A leave of absence must be granted for a finite period of time.
c. A leave of absence normally may not exceed four semesters.
d. A leave of absence normally may not be granted for the current semester after the last day on which courses can be dropped without penalty.
e. A leave of absence may not be granted to students currently on academic trial or disciplinary probation.
f. A leave of absence is distinct from withdrawing for medical reasons and is not granted for medical reasons.
g. A leave of absence does not guarantee housing upon the student’s return.
h. A leave of absence guarantees readmission to the student’s college in the University, if the student confirms his or her intent to return by the closing date for a normal readmission application (October 31 and March 31 preceding the appropriate semester).
i. While on a leave of absence, an individual’s student status is temporarily terminated. A leave of absence guarantees an individual’s readmission only if he or she takes the appropriate action.
j. Financial aid awarded but not used prior to a leave of absence will not be carried over. Reapplication for aid for the readmission period must be made according to normal Office of Financial Aid policies and procedures applicable to that period.
k. A leave of absence should be confirmed by the appropriate form signed by both the student and the dean of the college involved.

WITHDRAWAL

A student who wishes to withdraw from college must first notify his academic dean in person or in writing.

READMISSION

Any degree student who has left school for one semester or more must write to their dean’s office to request readmission. Students must apply for readmission by October 31 or March 31 preceding the appropriate semester of return.

LOW SCHOLARSHIP

The information below describes the general University regulations for low scholarship standing. The Studies Committee of each college may determine additional or supplementary requirements. Students with questions regarding their academic standing should consult with their college dean.

1. “On Trial”—
   a. “On trial” is an intermediate status between good standing and dismissal. The students remain enrolled according to stated academic conditions of their college.
   b. Students are placed “on trial” by the dean, or the designated committee of the college concerned. Special academic conditions may be set in each case. Normally the period of “trial” status is one semester.
   c. The circumstance under which students are placed “on trial” are as follows:
      (1) Any student who is readmitted to the University after having been dismissed for low scholarship re-enters “on trial.”
      (2) Generally a student is placed “on trial” if in any semester he has failed half or more of the hours of his enrollment but has been permitted to continue in college.
      (3) A student whose record has been consistently below the graduating average or generally unsatisfactory in any semester may be placed “on
"on trial" or continued "on trial" even though he does not come within the provisions of section (2).

d. A student who has earned fewer than thirty semester hours of credit and is "on trial" is barred from participation in all athletic and other student activities.

2. Separation —
   a. A student is dismissed from the University if he receives grades below passing in one-half or more of the semester hours of his enrollment in any semester unless he is allowed to continue by action of the designated committee.
   b. A student who fails to meet the condition of his trial or whose record has been unsatisfactory and consistently below the graduation average may be dismissed for low scholarship even though he does not come within the provision above.
   c. A student dismissed for low scholarship must address his application for readmission to the college taking the action.
   d. Any student dismissed for academic or disciplinary reasons must receive written approval from his/her previous academic dean (or the Dean of Students for disciplinary cases) before enrolling in any University course.

INTERCOLLEGE TRANSFERS

A student who is or has been a member of any college of this University may transfer to another college of the University only with the consent of the deans of the two colleges concerned. In the case of veterans receiving educational benefits through the Veterans Administration, the change must also be approved by the advisor to veterans in the Dean of Students Office.

UNDERGRADUATE DEGREE REQUIREMENTS

Degrees are conferred on the recommendation of the colleges and specific requirements will be found in the sections devoted to the respective colleges.

In addition to the course requirements of the curricula, students must also fulfill the general requirements in physical education.

To be eligible for graduation, a student must have attained a cumulative average sufficient to meet the minimum requirements for the college in which the student is officially enrolled. Grades in courses accepted for transfer credit are excluded in computing this average.

Every candidate for a degree is required to have taken 30 of the last 42 semester hours of credit in residence at the University except that those who have completed three years of premedical study in the University are awarded their degrees after successful completion of one year of study in any approved college of medicine. Other exceptions to this rule may be made only on recommendation of the Academic Council and in cases of undue hardship. To qualify for a second bachelor's degree the candidate must have fulfilled all the requirements for the degree and must have taken a full year of work, usually thirty hours, in addition to that taken to qualify for the first degree.

PHYSICAL EDUCATION

One year of physical education, normally completed during the freshman or sophomore years, is required of all undergraduate students in four-year programs. The two credits earned in activities classes will be included in the total number of hours required for graduation. Students may opt to take activities classes on a pass-no pass basis. (For further details see the pass-no pass heading under General Information). Medical examinations are required of all new
students. Those with serious defects may be given restricted work or may be excused by the Director of Student Health. The Physical Education requirement for students pursuing two-year degree programs shall be one credit of course work earned in activities instruction.

Students twenty-five years of age or older are exempt from physical education requirement.

UNIVERSITY RESPONSIBILITY

Many courses involve instruction in and the use of various types of power equipment, laboratory apparatus, and specialized facilities. The University takes every precaution to provide competent instruction and supervision of such courses. It is expected that students will cooperate by following instructions and exercising precaution. In case an accident does occur resulting in personal injury, the University can assume no responsibility except for medical care that is provided by the Student Health Service.

USE OF ENGLISH

Correct English usage is demanded by all departments of the University. Written work of any kind which is unsatisfactory in manuscript form, grammar, punctuation, spelling, or effectiveness of expression may be penalized, regardless of contents. Students whose written work falls below the standard of correct usage may be referred to the English department for additional instruction, even though the freshman course in English has been passed.

Before they may be admitted to the University, foreign students must offer evidence that they are capable of reading and writing English on the college level.

STUDENT HEALTH INSURANCE

Through an arrangement with a commercial insurance company, students are able to procure a student health insurance policy. Married students may procure coverage for their spouse and children. Further details may be obtained from the Infirmary.

POLICY STATEMENT ON DISCRIMINATION

As a public institution, the University of Vermont opens its doors and facilities to any student on the basis of his or her character and ability and irrespective of race, religion or nationality.

In addition, Title IX of the Education Amendments of 1972 prohibits discrimination on the basis of sex. No person shall be excluded from participation in or denied the benefits of any program or activity at the University on such a basis. Students, either individually or in groups, who are unable to resolve a grievance arising out of sex discrimination may have a hearing before a special committee appointed by the president. Persons wishing to pursue this course of action may contact the President's Office.

ACADEMIC DISCIPLINE

The University expects each student to maintain high standards of personal conduct and social responsibility at all times both on and off campus. All students as responsible citizens, are required to observe and to share in the support of all local, State and Federal regulations. Any student who fails to uphold these standards is subject to disciplinary action by the University.

The disciplinary authority of the University is vested in the President. In such cases as he considers proper, this authority may be delegated to the several deans and to appropriate judicial bodies. The continuance of each student at the University, the receipt by him of academic credits, his graduation and the conferring of any degree or the granting of any certificate are strictly subject to the disciplinary powers of the University. The University is free to cancel his
registration at any time on any grounds, if it considers such action to be for the welfare of the institution.

University policy on the above matters is explained in detail in “The Cat's Tale.” Each student is held responsible for knowledge and observance of these rules and regulations.

UNIVERSITY RESIDENCY REGULATIONS

The Vermont Legislature has established a lower rate of tuition for students who are Vermont residents. Such a policy appears to have as its objective the attempt to more evenly distribute the cost of operating and supporting the University of Vermont between Vermont residents whose taxes have previously supported the University and non-residents who have not done so.

The Legislature has stated that enrollment at an institution for higher learning or presence within the State for purposes of attending an institution of higher learning shall not constitute residence for tuition purposes.

IN-STATE STATUS REGULATIONS

Adopted by the Board of Trustees
December 14, 1974

The following requirements must be met by a student prior to being granted resident status for the purpose of admission, tuition and other University charges:

1. The applicant shall be domiciled in Vermont, said domicile having been continuous for one year prior to the date of application for a change in residency status. Changes in residency status shall become effective for the semester following the date of application.

2. Domicile shall mean a person’s true, fixed and permanent home, to which he intends to return when absent. A residence established for the purpose of attending an educational institution or qualifying for resident status for tuition purposes shall not of itself constitute domicile. Domicile shall not be determined by the applicant’s marital status.

3. The applicant must demonstrate such attachment to the community as would be typical of a permanent resident of his age and education.

4. Receipt of financial support from the applicant's family will create a rebuttable presumption that the applicant’s domicile is with his family.

5. An applicant becoming a student at an institution of higher learning in Vermont within one year of first moving to the state shall have created a rebuttable presumption of residence in Vermont for the purpose of attending an educational institution.

6. A student who is eligible for tuition purposes to enroll as a resident student in another state shall not be enrolled as a “Vermont Resident.”

7. A student enrolling at the University of Vermont shall be classified by the appropriate admissions officer (Director of Admissions, Dean of the Graduate College, Associate Dean of the College of Medicine) as a resident or non-resident for admission and tuition purposes. The decision by the officer shall be based upon information furnished by the student and other relevant information. The officer is authorized to require such written documents, affidavits, verifications or other evidence as he deems necessary.

8. The burden of proof shall in all cases rest upon the student claiming to be a Vermont resident and shall be met upon a showing of clear and convincing evidence.

9. The decision of the admissions officer on the classification of a student as a resident or non-resident may be appealed in writing to the Committee on Residence whose decision shall be final.
The College of Agriculture performs four public functions: it teaches resident students; investigates problems; brings information to the people; and performs related services. These four areas of work are performed by the resident instruction division, the research division (Vermont Agricultural Experiment Station), the extension division (Vermont Cooperative Extension Service), and the Related Services Division.

The curricula of the resident instruction division prepares students for professional careers. Upon receiving the bachelor’s degree, students usually enter management, specialized services, education, or research—all these in areas related to agriculture, basic biological sciences, conservation, and international service.

The evolution of society necessitates continual progress and change. Thus the challenge of preparing students to excel now, yet adjust to future changes, is being met through programs designed to give a foundation both in the social sciences and the humanities plus a fundamental technical education.

All programs in the College of Agriculture leading to the Bachelor of Science degree require 120 semester hours of prescribed and elective courses, plus two credit hours in physical education. The normal semester program includes fifteen to eighteen credit hours of courses.

In each area of study certain courses are prescribed, with allowance made for the election of additional courses, to provide a well-balanced and integrated educational program and to insure reasonable concentration. Faculty advisers counsel students in the selection of elective courses and educational problems.

PROGRAMS OF STUDY

The College of Agriculture awards the degree of Bachelor of Science in each of the following programs:

Agricultural Economics  Botany
Agricultural Engineering Dairy Technology
Technology  Environmental Studies
Animal Sciences  General Studies
Biochemical Science  Occupational and Extension Education
Biological Science  Plant and Soil Science
The programs are broad and flexible, with sufficient areas of concentration and electives to meet the specific needs and desires of the student. Therefore, responsible departmental advising is important in the development of each student's program. Every candidate for this degree, in consultation with his/her adviser, must choose one of the above programs upon entering the college. The candidate must then fulfill the requirements stated below.

**DEGREE REQUIREMENTS**

A. The successful completion of a minimum of 120 credit hours of course work plus two credit hours in physical education.

B. A minimum cumulative grade point average of 2.00. (This is an increase from 1.70 and applies to all students admitted for Fall 1976 semester [Class of 1980 or new transfers]. Students admitted prior to Fall 1976 are still under 1.70 minimum.)

C. The successful completion of at least two courses in each of the following areas:
   1. Writing, communication and public address
   2. Science, mathematics and statistics
   3. Fine arts, philosophy, language and literature
   4. Social sciences

D. Courses as specified in individual programs.

Applicability of courses to specific areas will rest with the adviser and, if necessary, with the concurrence of the dean of the college. It is further recommended that courses chosen to fulfill these requirements be taken outside the department in which the student's program of study is located. Students desiring to complete teacher education programs and teacher certification must enroll in appropriate courses in the College of Education and Social Services. (see College of Education and Social Services Adviser — 306 Waterman)

**PREPROFESSIONAL PREPARATION**

Students who are striving for admission to professional colleges such as dentistry, medicine and veterinary medicine can meet the undergraduate requirements for these programs through enrollment in the College of Agriculture. Those interested in human medical sciences usually enroll in biological sciences while individuals interested in veterinary medicine usually enroll in either animal sciences or biological sciences. Any student indicating a specific professional interest will be assigned a faculty adviser knowledgeable in that area.

Competition for places in professional schools is very keen and a superior academic record throughout an undergraduate program is necessary to receive consideration for admission. Due to this intense competition, all potential candidates are encouraged to also complete the requirements in an area of secondary interest.

Students applying to the College of Agriculture, and expressing an interest in medicine or preveterinary medicine, should present evidence of high performance in high school level science and math courses, plus additional supporting documentation such as high SAT scores and strong letters of recommendation.

**Biological Sciences Core**

Students initially interested in the broad area of biological sciences may enroll in this core curriculum for the freshman and sophomore years. The curriculum is designed to permit students to continue in basic biology or to transfer to one of
the applied biology programs. In addition to the general college requirements listed, students should complete during the first two years the following courses or their equivalents: Biology 1, 2 or Zoo 9 and Botany 4; Math 19, 20 or Math 21; Chem 3, 16 or Chem 1, 2 and 16 or Chem 1, 2 and 131, 132; Microbiology and Biochemistry 55 (Microbiology). Course descriptions are listed under the appropriate departments.

Programs available upon completion of the core curriculum are listed below. Students may wish to select offerings from these programs during the freshman and sophomore years in addition to the required courses stated above.

Freshman & Sophomore Years
Take Biological Science Core

Junior & Senior Years
Continue in Biological Science or transfer to Animal Science, Biochemical Science\(^1\), Botany or Plant and Soil Science

\(^1\)See Microbiology & Biochemistry

A description of programs and concentrations follows. They are in alphabetical order along with the other programs of the College.

**Agricultural and Resource Economics**

The Department of Agricultural and Resource Economics offers two major programs of study: the Agricultural Economics program in the College of Agriculture and the Resource Economics program in the School of Natural Resources.

**AGRICULTURAL ECONOMICS** The objective of the agricultural economics program is to provide students with a strong background in the social sciences and specific training in basic economic theory and the economics of U.S. and World agriculture. Students choose one of three concentrations.

1. Agribusiness and Marketing: Courses prepare the student for managerial and sales positions with businesses, especially those that supply agricultural inputs or market agricultural products.

2. Farm Management: Courses prepare the student to manage a farm business or to work in the many service or educational fields related to agricultural production and credit.

3. Agricultural Economics: A professional program aimed at students who wish to continue their education in graduate school, to participate in agricultural development programs, or to conduct research in the economics of agriculture.

Students in all three concentrations shall successfully complete a minimum of thirty hours in the social sciences. Of these, at least twenty-four hours shall be in Agricultural and Resource Economics, Economics, or Business Administration, of which twelve hours shall be in Agricultural and Resource Economics courses of advanced standing. All courses must be selected in consultation with the student's departmental adviser.

The number of courses required of all students is purposefully minimal. To be as flexible as possible, the student is encouraged to develop an individually tailored program through the careful selection of electives consistent with his objectives and departmental standards.

**RESOURCE ECONOMICS** For a description of the program in Resource Economics, refer to the School of Natural Resources.
Animal Sciences

Each student majoring in programs offered within this department shall successfully complete a minimum of eight semester courses in Animal Science, including at least five of advanced standing. Additional courses must be selected in consultation with the departmental advisers in order that the selected program can be individualized to more nearly meet the professional aims and goals of the student.

DAIRY TECHNOLOGY This program has been designed to provide the scientific, technical, and practical instruction necessary to prepare the graduate for the numerous positions available in the dairy and food science field. The students who elect to place greater emphasis on the scientific aspect of Dairy Technology will find that they are prepared to work in quality control, research laboratories, and to do graduate study in dairy and food chemistry or bacteriology. The student who desires to place greater emphasis on business and the social sciences may become qualified for numerous supervisory and management positions in the dairy and food industry.

BASIC ANIMAL SCIENCE This program has been designed specifically for those individuals who are interested in careers in industrial research and development or university positions. The students who elect this program will be provided with the strong science background that is necessary for advanced study in such areas as physiology, nutrition, genetics, and related biological fields.

ANIMAL TECHNOLOGY This program provides formal training in the theories and practices of the animal sciences with special emphasis on management and technical competence. It prepares the student for employment as a farm owner, manager, or field work with state and federal extension services, breed associations, hatcheries, farm organizations, and various commercial companies.

ANIMAL INDUSTRY This program is primarily for those students who are interested in business. It prepares them for supervisory and management positions in industries related to Animal Science, such as those involved with the processing and sales of dairy, meat and poultry products; feed and fertilizer companies; farm equipment and supply agencies; advertising and public relations; and other areas of public service.

Biological Science

This program is designed to provide flexibility in developing a background in biological sciences. Students may fulfill their course requirements by selecting basic and applied courses from the several biologically oriented departments (Animal Science, Botany, Microbiology and Biochemistry, Plant and Soil Science, Zoology, and others).

Graduates of the program may continue their education in graduate school or professional schools or they may obtain employment in a variety of areas. Possible job opportunities would include basic and applied research in educational institutions and governmental agencies, technical writing, employment with environmental consultants, etc.

The following courses are required of all students in the Biological Science program following completion of the core requirements: genetics (one semester),
biochemistry (one semester), physics (two semester sequence), and statistics (one semester). In addition, all students must take six additional courses in basic or applied biology. These courses should be selected to include at least one course in botany or applied plant science, one course in zoology or applied animal science, one course in the area of evolution and diversity of life, one course in ecology, and two courses in physiology or biochemistry. Of these, at least one or more courses at the 200 level should be included. These courses are selected in consultation with the adviser from the diverse offerings of the various colleges and departments.

Botany

Students in the Colleges of Agriculture or Arts and Sciences may major in Botany. Each undergraduate plans a program in consultation with a personal departmental adviser. The emphasis on flexibility permits a choice of electives when planning for each individual's career. Cross-disciplinary study is encouraged, as Botany, a fundamental science, is the base upon which education, research, and careers in both applied and basic plant science is built. Many students aim specifically for careers that do not require formal education beyond the Bachelor's degree, e.g., preparation for numerous positions in: agriculture, business, education, administration, government, industry, medicine, research, or their own businesses. Many other students prepare themselves for graduate education and professional careers requiring advanced degrees, e.g., careers in botany, biology, medicine, dentistry, agriculture, biochemistry, or environmental sciences. In either case, close attention is given to increasing the student's choices after college. Students are also encouraged in their senior year to enrich their botanical experience through individualized, original research and study with faculty members. Areas of interest include: anatomy, cell botany, cytology, ecology, phycology, physiology, plant development, plant pathology, and taxonomy.

Required courses: Mathematics 21, 22; or Mathematics 21 and Statistics 111; or Mathematics 19, 20, and Statistics 111, Physics 15, 16; Chemistry 16 or preferably 131, 132; Biology 1, 2; Botany 101, 104, 105, and 109 or 160; two additional semester courses in Botany. A sequence of Botany 4 and Zoology 9 or vice versa may be substituted for the Biology 1, 2 sequence.

Six hours of modern foreign language are strongly recommended. Students may petition the department to substitute other courses for certain requirements in the planning of individual programs:

Environmental Studies

The College of Agriculture participates in the interdisciplinary University Environmental Program as described on page 131. Most students select the Coordinate Major Program and fulfill the requirements in one of the major programs available in the College.

General Studies

This program is designed for students seeking a general rather than a specialized knowledge in the field of agriculture and related subjects. Through the proper selection of electives, a student may choose an area of concentration within the college and also select courses that contribute to a liberal education.

Required: In addition to the basic college requirements each student must
satisfactorily complete twenty-four hours in the College of Agriculture. All additional courses must be selected in consultation with and have the approval of the student’s adviser.

**Microbiology and Biochemistry**

**BIOCHEMICAL SCIENCE** Contemporary biology increasingly demands knowledge of events at the molecular level. Students who plan a career of research or teaching in biology are well-advised to concentrate on the principles and methods of biochemistry during their undergraduate years. To this end the program in "Biochemical Science" provides a coordinated sequence of study in chemistry, biology, and biochemistry. Depending on the student’s future plans and capability, three areas of concentration are possible: (1) **Cellular Biochemistry** which emphasizes the physiological and metabolic reactions of organisms; (2) **Molecular Biology** which focuses on the chemical and physical structures of subcellular particles; and (3) **Nutritional Biochemistry** which emphasizes the synthesis and utilization of nutrients. Specialization in one of these concentrations normally commences in the Junior Year after completion of the Biological Sciences Core (pg. 49). Students are required to complete a minimum of three hours of physical chemistry (or eight hours for the Molecular Biology option), twelve hours of biochemistry and three advanced biology courses, two of which would be in their specialty (e.g., Nutrition, Physiology, Genetics, etc.).

**Plant and Soil Science**

The Plant and Soil Science program is designed for students interested in horticultural crops, agronomic crops, soils, and insect pest management as they relate to the science of food, feed, and fiber production or to recreation and the environment. The program is flexible and allows students to place their primary emphasis in either science or agri-business. Suggested groupings of courses have been developed by the department to be used as guides for students interested in General Plant and Soil Science, Soil Science, Plant Science, Ornamental Horticulture and Landscape Design, Horticultural Therapy, and Insect Pest Management. Specific courses, in addition to the core courses, are worked out between the student and the advisor.

All students majoring in Plant and Soil Science must take Principles of Plant Science, Introductory Soil Science, Soil Fertility and Management, one semester of Seminar, two semesters of Chemistry (one semester of inorganic and one semester of organic), one semester of Mathematics or Statistics, Plant Pathology, and Insect Pest Management. A minimum of 6 additional courses in Plant and Soil Science at the 100 level or above are required, to be selected in the student's area of interest and approved by his or her advisor. Courses in related areas may be substituted for one or two of these 6 courses with the consent of the student's advisor.

Vocational Education and Technology

The VOTEC department offers two major programs, (1) Occupational and Extension Education and (2) Agricultural Engineering and Technology which provide an opportunity to choose from eight areas of professional concentration. The programs are flexible. Certain concentrations may be completed either as (1) a major in this department, (2) a dual major when combined with other programs in the University, and/or (3) without having to attend the University campus on a full-time basis. Courses of general interest are available to students majoring in other programs in the University.

**OCCUPATIONAL AND EXTENSION EDUCATION**  Four areas of concentration prepare students for teaching certification. Teaching field minors may be combined with these specializations. Students should contact this department regarding requirements for admission into the University teacher education program.*

One concentration prepares students for educational responsibilities in governmental agencies, private organizations, business, or industry.

1. Agricultural and Natural Resources Education: Prepare to teach grades 7-12 general and vocational subjects, and may concentrate their studies in one of the many agricultural or renewable natural resource subject areas. Field experiences in schools are provided during the sophomore or junior year, and the senior year. Professional courses include VOTC 106, 152, 155, 251, and 282, and two electives from VOTC 156, 157, 158, 159.

2. Industrial Education: Industrial Arts and Vocational fields are included in this concentration. Industrial Arts Field — prepare to teach six I.A. subject areas commonly found in grades 7-12. Vocational Field — prepare to teach a specialized trade or industrial subject in grades 11-12. At least two years of acceptable experience in business, industry, or the military is required before the degree can be awarded in the vocational field.** Professional courses include VOTC 106, 152, 155, 251, and 282, and two electives from VOTC 156, 157, 158, 159. Industrial Arts students will also complete required laboratory courses.

*Teacher certification concentrations are offered in cooperation with the College of Education and Social Services. Selected programs have been approved under the Vermont State Department of Education’s Program Approval Plan, and have reciprocity certification in selected states. Selected courses in the College of Education and Social Sciences will be included in teacher certification concentrations.

**See next page.
3. Diversified Occupations Education: Prepare to teach life relevant subjects to grades 9-12 special needs pupils, when combined with a teaching field specialization in occupational, secondary or special education. Students may receive initial certification in secondary special education. Individualized study and field experiences are included. Professional courses include VOTC 106, 170, 275, and 276.

4. Health Occupations Education: Prepare to teach occupationally oriented subjects in grades 10-14. Available only to students who have completed a recognized training program in a health occupation and are licensed. A minimum of two years of experience in a health occupation is required before a degree is awarded. Professional courses include VOTC 106, 152, 155, 251, and 282, and two electives from VOTC 156, 157, 158, 159.

5. Extension Education: Prepare for educational responsibilities in government agencies, private organizations, business, or industry by majoring in another program in the University and complete this concentration concurrently. Field practicum experiences are provided. Professional courses include VOTC 104, 112, 156, and 253.

**AGRiCULTURAL ENGINEERING AND TECHNOLOGY** This program offers students a choice of two concentrations leading to a Bachelor of Science degree and one which provides the first two years of a Bachelor of Science in Agricultural Engineering degree.

1. Agricultural Engineering Technology: Technical and practical instruction related to buildings, utilities, machinery, soil and water; including relevance to problems of environmental concern. Preparation for employment in agriculture and public service. Courses include VOTC 102, 121, 131, 140, and 162.

2. Professional Agricultural Engineering — B.S.A.E.: The first two years of a professional engineering curriculum. The last two years of the professional program must be completed at an institution offering a Bachelor of Science in Agricultural Engineering degree. Vermont resident students in good standing may complete their studies at the University of Maine, under a special arrangement which allows them to pay the same tuition rate as Maine residents. Preparation for professional engineering work in soil and water control, agricultural machinery and equipment, agricultural structures, the application of electricity and refrigeration to agriculture, and rural water supply and sanitation. The graduate is also prepared for research and graduate study in agricultural engineering.***

**Several paths lead either to a degree, teacher certification, or both. A degree may be earned on a full-time basis, or on a part-time basis while employed in industry or teaching. Persons entering teaching directly from industry may earn teacher certification through the Transition Into Education (T.I.E.). Qualified individuals may start as non-degree students and seek admission to a degree program after satisfactorily completing specified courses. Persons having two or more years of appropriate work or military experience may qualify for up to 30 credits by successfully completing National Occupational Competency Institute Examinations. Students with less than two years experience may qualify for the off-campus technical internship. Qualified non-degree students seeking teacher certification will usually complete professional courses, 152, 153-154, 156, 157, 158, 159 and 251, plus selected courses in the College of Education and Social Services.***

**Freshman admission (at the Maine-resident tuition rate) to this curriculum at the University of Maine will be allowed for Vermont-resident students wishing to take all four years at one institution.***
3. Residential Technology: Technical and practical instruction related to resi­
dential construction, site selection, equipment, electricity, water supply and
sewage disposal, including environmental and socio-economic considerations.

Preparation for employment in the housing industry and public service. Some
areas of employment are: Banks, Farmers Home Administration, Federal Hous­
ing Administration, and the manufactured home industry. Courses include
VOTC 121, 131, 162 and HEC 51, 151, 154 and 163.

The College of Arts and Sciences aims to provide the opportunity for men and women to acquaint themselves with man and his environment: the natural, social and cultural environment and its relationship to man's intellectual and creative achievements; to provide an atmosphere of free inquiry in order to be able to perceive the kinds of alternatives available to man with respect to the problems, challenges and opportunities of life by means of continuous probing, weighing and critical evaluation prior to — but not necessarily in lieu of — choosing courses of thought and action while at the same time recognizing the increasing sense of humility that such learning imposes; above all, to deal with men and women as humans and only in a complementary fashion as job aspirants.

The overall mission of the College of Arts and Sciences is to provide the highest possible caliber of undergraduate general education in the liberal arts and sciences. This ranges from the utilization of intellectual
tools and skills (articulative, quantitative, scientific and creative) to the theoretical exploration of man and his natural, social and cultural environment. It is accomplished through critical analysis, which the educated mind is trained to bring to bear upon that environment and interrelationships among elements of the environment throughout the student’s years on campus and thereafter. The core missions are:

To provide opportunities for undergraduates to concentrate in specific disciplinary approaches (i.e., major), which may lead to pre-professional preparation, graduate studies, general education as a citizen who contributes to rather than draws upon the society, or a combination of these.

To provide through distribution requirements an awareness of how the diverse intellectual, cultural and creative aspects of the liberal arts and sciences approach the study of man and his environment:

The humanities, through the study of the great individual creative geniuses of mankind, past and present, in literature, the arts and philosophy.

The performing arts, by providing opportunities for self expression through active participation in fields such as music, art, theatre and creative writing.

The social sciences, through their focus upon the human experience and behavior, individual and collective, via the application of analytical methods and their concern with the human species and its relationships with the various environments evolved through time, and with the diversity of the human conditions at any time.

The natural sciences, through an understanding of the order of nature, the organization of the universe from the microcosm to the macrocosm, their relationship to man and his powers of observation, imagination, ratiocination and consequent understanding and appreciation of the scope, logic, precision and limitations of scientific methods, principles and challenges.

Further, to provide graduate training in selected areas in which local, regional or national needs coincide with and complement strengths of particular undergraduate departments or programs, as well as in selected areas where our position as an institution of higher learning benefits intellectually and educationally from the presence of more specialized, rigorous and advanced study for the further development of the educated mind.

To carry out quality scholarly activity and research as a continuing contribution to the world’s knowledge and understanding of humanity and the universe. As a necessary prerequisite to the maintenance of the intellectual competence required of a faculty providing quality education in a college of a true university, we strive to provide an environment for mutual intellectual stimulation, curiosity, and growth.

It must be emphasized that the integrity of the whole College effort
requires the continued emphasis on the excellence of each of the missions above.

The Liberal Arts and Sciences Curricula

The curricula in liberal arts and sciences, leading to the degree of Bachelor of Arts or Bachelor of Science or Bachelor of Music, offer instruction in language, literature, philosophy, religion, the fine arts, the social sciences, the physical and biological sciences and mathematics.

Every candidate for the Bachelor of Arts degree must fulfill the requirements described in sections I and II below, and present a total of 122 semester hours of credit, including 2 semester hours of required courses in physical education. At least 75 of the minimum 122 credit hours must be in subjects outside the major discipline.

Every candidate for the Bachelor of Science degree must fulfill the requirements described in sections III and IV below, and present a total of 122 semester hours of credit including 2 semester hours of required courses in physical education.

Every candidate for the Bachelor of Music degree must fulfill the requirements described in sections I and V below, and present a total of 123 or 122 semester hours of credit (as described in section V below), including 2 semester hours of required courses in physical education.

The Studies Committee of the College will rule upon petitions for exceptions to the College regulations.

The College expects entering students to be able to write correct, clear and effective English, and no student unable to do shall obtain the B.A., the B.M., or the B.S. degree.

A minimum cumulative quality point average of 2.0 is required for graduation from the College of Arts and Sciences. Courses taken on a pass/no pass basis may not include any required by the student's major department, either for the major or for the degree, or any taken to fulfill distribution requirements of the College of Arts and Sciences.

All exceptions to degree and/or major requirements must be approved by the Studies Committee.

I. REQUIRED FOR ALL B.A. STUDENTS

In addition to the two semesters of physical education required of all students by the University, the following distribution requirements must be met: Each student shall present nine semester courses (3 credits, or more each) by choosing three courses from each of any three of the following categories:

A. LANGUAGE AND LITERATURE

*Chinese  *Greek  Literature
English *Hebrew
*French *Italian *Russian
*German *Latin *Spanish

*Intermediate level or above.
No more than two of the three required courses may be chosen from any one discipline. Students may not fulfill the requirement without offering a foreign language, at the intermediate level or above.

**B. FINE ARTS AND PHILOSOPHY**

- Art
- Music
- Philosophy
- Theatre
- Communication
- Religion

No more than two of the three required courses may be chosen from any one discipline.

**C. SOCIAL SCIENCES**

- Anthropology
- History
- Economics
- Political Science
- Geography
- Psychology
- Sociology

No more than two of the three required courses may be chosen from any one discipline.

**D. SCIENCES AND MATHEMATICS**

- Biology
- Geology
- Botany
- Physics
- Chemistry
- Zoology
- Mathematics

(Chemistry, zoology and zoology are considered one discipline)

No more than two of the three required courses may be chosen from any one discipline. (Biology, botany and zoology are considered one discipline)

*Note:* Linguistics 101, 102 may be considered as meeting the distribution requirements of Category A or B or C at the student's option. Greek 32 may be considered as meeting the distribution requirements of Category A or B at the student's option. In no case may the requirements of Category A be satisfied without offering a foreign language at the intermediate level or above.

**MAJOR FIELD** Each student, in consultation with an appropriate faculty adviser from his or her prospective major department, must choose a major field by the enrollment period for the junior year. The specific courses making up the field, as well as the student's entire program for the last two years, are chosen in consultation with the chairman of the department in which the major part of the work is to be taken and must have his approval. The following minimal requirements must be met.

1. The field must be a well integrated whole, adapted to the student's special interest.
2. It must include a minimum of 36 semester hours, at least 18 of which must be in the major discipline. Concentration requirements, including courses and necessary prerequisites may not exceed 60 semester hours, not more than 45\(^1\) of which may be required in the major discipline. Transfer students will be expected to complete at least one-half of the courses that are required in their major discipline.
3. Courses taken to fulfill distribution requirements may also be counted toward the major credit requirements.

4. All students are required to obtain an average grade of C in all courses required for their major.

**INDIVIDUAL DESIGN MAJOR** For those students whose needs and interests are not met by the major programs currently offered in the College, there exists the option for the student to initiate a non-departmental major chosen from among the various offerings in the College and tailored to their individual needs. The program must be sponsored by a faculty member and approved by the College Honors and Individual Studies Committee and presented in the student's sophomore year.

**MULTIPLE MAJORS** Students may elect more than one major by consulting the Dean's Office, College of Arts and Sciences and the departments involved. In order to multiple major, a student must satisfactorily complete the major requirements of each department involved.

**DATE OF EFFECTIVENESS OF DEGREE REQUIREMENTS** The catalogue that determines the requirements for students is the catalogue in effect at the time the student enters the College of Arts and Sciences. Should requirements for the degree or the major be changed after a student is admitted to the College of Arts and Sciences, the student would have the option of fulfilling all of the old regulations or all of the new regulations.

**II. SPECIFIC DEPARTMENTAL REQUIREMENTS FOR B.A. MAJORS**

**ANTHROPOLOGY** Anthropology 21 and two of the following three: 24, 26, 50. In addition, Anthropology 225 (normally in the senior year), 228, and four other advanced courses. Every student must take at least three courses in other disciplines related to anthropology. Consult the Department on this last point.

**AREA AND INTERNATIONAL STUDIES** Entering students are invited to consider the option of concentrating in Area & International Studies. Courses in several academic disciplines can be combined so as to focus on a particular area of the world, thus providing an opportunity to test generalizations against the particular reality of a geographical area and its people.

Undergraduates who major in Area Studies usually accumulate sufficient credit to enable them to also fulfill department requirements in one of the social sciences, humanities, or foreign languages.

The five areas presently available for concentration are: **ASIA, CANADA, LATIN AMERICA, RUSSIA/EAST EUROPE, EUROPE** (Western, Northern, Mediterranean).

This relatively novel method of undergraduate education combines exposure to the traditional disciplines with integrative knowledge and appreciation of a foreign culture and thus combines the broad liberal arts education with a more specific area competence.

Students who plan on majoring in Area Studies should take during their freshman and/or sophomore years the required foreign language courses of the selected area as well as such beginning courses in the social sciences and humanities which are prerequisites of subsequent required courses and do also meet the general distribution requirements.

1 At least 75 of the minimum 122 credit hours required for a Bachelor of Arts degree must be in subjects outside the major discipline. (See preceding page.)
Students interested in concentrating in Area Studies are urged to contact Professor Douglas Kinnard, Director, Area & International Studies, Extension 4062.

Specific requirements of the individual programs are as follows:

**ASIAN STUDIES**

Asian area studies majors will concentrate on one of three major geographic areas in Asia — West Asia (the Middle East); South and Southeast Asia; and East Asia (China and Japan). Special arrangements can be made for students wishing to concentrate on studies of Central Asia.

Courses relating specifically to the three areas are listed below. In addition “Readings and Research” courses (numbered 197, 198) are regularly offered to students at an advanced level; and “Special Topics” courses (numbered 195, 196, 295) on Asian areas are occasionally offered by various departments and may be taken to fulfill the major requirements. There are also courses such as Economics 216, “Economic Development,” and Economics 258, “Problems of Communism,” which cut across geographic lines and may be applicable to the students’ program.

The Asian Area Studies major will choose an adviser from the faculty in the area of his particular interest, and work out a program with him.

**WESTERN ASIA**

I. Twelve hours of courses at the 100 or above level, which deal specifically with the Middle East:

- Anthropology 166 Peoples of the Middle East
- Anthropology 170 Pastoral Peoples
- History 105 History of the Ancient Near East
- History 117 The Rise of Islam
- History 118 Modern Middle East
- Religion 141 Hebrew Scriptures
- Religion 142 Post-Biblical Judaism
- Religion 145 Primitive Christianity

II. An additional twelve hours from courses included in the Asia Studies Program. The student may apply six hours of a Middle Eastern language to this requirement. At present the University offers two years of Hebrew. Students who study Arabic, Persian, or Turkish at other accredited institutions may petition to apply credits earned to this requirement, or they may take a language proficiency test.

III. An additional twelve hours from related courses, chosen in consultation with advisor.

**SOUTH AND SOUTHEAST ASIA**

I. Twelve hours of courses at the 100 or above level which deal specifically with South and Southeast Asia:

- Anthropology 163 Peoples of Southeast Asia and Oceania
- Anthropology 165 Peoples of South Asia
- Area & Int'l Studies 195 Asian Literature in Translation
- Area & Int'l Studies 196 Introductory Sanskrit
- Area & Int'l Studies 295 China and India in Modern Times
- Geography 109 South Asia
- Political Science 176 Asian Political Systems (India)
- Political Science 196 Indian Politics and Society
- Religion 161 Hindu Tradition
Religion 166  Buddhist Tradition (Religion 21, Introduction to Asian Religions, is recommended as a prerequisite.)

Religion 195  Man and Nature in East and West

II. An additional twelve hours from courses included in the Asian Area Studies Program. The student may apply six hours of an appropriate language (e.g., Hindi, French, Arabic) if they have studied them at an accredited university; or they may take a language proficiency test.

III. An additional twelve hours from related courses, chosen in consultation with advisor.

**EAST ASIA**

I. Twelve hours of courses at the 100 or above level which deal specifically with East Asia:

- Area & Int'l Studies 195  Asian Literature in Translation
- Area & Int'l Studies 195  Ancient Chinese Literature
- Area & Int'l Studies 196  Modern Asian Fiction
- Area & Int'l Studies 295  China and India in Modern Times (A comparative study) (credit given for history and political science)
- Geography 108  Geography of East Asia
- History 271  Modern China (1800-1949)
- History 272  Contemporary China (1949-present) (History 73, 74, East Asian Civilization, is recommended as a prerequisite)
- Philosophy 221  I-Ching (Philosophy 23, Introduction to Oriental Philosophy, is recommended as a prerequisite)
- Political Science 175  Asian Political Systems (China, Japan)
- Religion 166  Buddhist Tradition
- Religion 175  Chinese Religion and Thought
- Religion 171, 172  Japanese Religion

II. Eight hours of Chinese at the intermediate level:

- Chinese 1, 2  Elementary Chinese
- Chinese 11, 12  Intermediate Chinese
- Chinese 21, 22  Introduction to Classical Chinese
- Chinese 121, 122  Advanced Chinese
- Chinese 195  Intermediate Classical Chinese
- Chinese 211  Modern Chinese Literature

III. An additional six hours from courses in the Asian Area Studies Program plus 10 hours from related courses selected in consultation with adviser.

**CANADIAN STUDIES**

I. Eighteen hours representing at least four different disciplines selected from the following courses:

- Anthropology 167, 267  Geography 102, 221
- Communication and Theatre 263  History 113, 114, 216
- English 135, 136  Political Science 173
- French 287, 288, 293  Sociology 167
II. French language through the Intermediate level.

III. An additional six hours from the above list and/or courses recommended by the Program.

IV. Twelve hours of an appropriate minor, determined in consultation with the student's advisor.

LATIN AMERICAN STUDIES

I. Twelve hours as follows:
   Anthropology 161
   Geography 106
   History 104
   Political Science 174
   Two additional semester courses selected from Area & International Studies, 193, 194; 195, 196; 197, 198; or 297, 298; or from courses recommended by the Program of Latin American Studies.

II. Plus six hours of advanced Spanish (Spanish 161, 162; 271, 272; or 293).

III. An additional 12 hours from related courses chosen in consultation with advisor.

RUSSIAN/EAST EUROPEAN STUDIES

A minimum of 21 semester hours selected from the following courses:

   Economics 11, 12 and 290 or 291
   Geography 103
   History 11, 12 or 52 and 243 or 244
   Political Science 172

Six additional semester hours from the above list and/or other courses recommended by the Program of Russian and East European Studies. Twelve semester hours of Russian to include Russian 11, 12, 101 and 102 unless Serbo-Croatian is selected.

*NOTE: The Program offers also an interdisciplinary individual-design major in Russian and East European Studies and Economics, requiring normally four courses in Russian or Serbo-Croatian, four courses in Economics, two area courses in disciplines other than Economics, two courses in Business Administration, and two approved electives at the 100 level or above.

*A graduate certificate in Russian and East European Studies is offered in conjunction with a Master's Degree program in a particular discipline.

EUROPEAN STUDIES (Northern, Western, Mediterranean)

I. At least eighteen hours of advanced courses in one European Area or Topic determined through consultation with an advisor and approval of the European Studies subcommittee of the Area & International Studies Program. (e.g. Medieval and Renaissance Studies.)

II. Fifteen hours of additional advanced courses related to Europe.

   The total of A and B shall include nine hours of advanced courses in European Literature and Fine Arts and nine hours of advanced courses in Social Science relating to Europe.

III. Six hours of a European foreign language related to the area or topic of A and at the 200 level. Those who have concentrated on a foreign language in
A shall offer six hours of a second foreign language at the 100 level or above in addition to the requirements of B.

Variants in the language requirement may be made by the advisor, depending upon the area of interest. (e.g. Ancient/Medieval History or Archaeology, where an ancient and a modern language would be required.)

IV. The student would, of course, also fulfill the Arts and Sciences general distribution requirements and would be encouraged to do so through a broad selection of courses dealing with Europe.

**ART** Students may concentrate in one of the following:

**Studio Art** Twenty-four hours in studio, including three courses chosen from 1, 2, 3, 4 with three different instructors, four at the 100 level, and 281 or 282 in the senior year; nine hours in Art History, including 109 preceded by either 5, 6 or 9, 54; and six hours of related advanced critical, social or creative studies.

**Art History** Twenty-four hours in art history, including 5, 6; four courses at the 100 level and two at the 200 level, one of the latter in the senior year; six hours in the department chosen from 1, 2, 3, 4, 9; nine hours of related advanced historical and/or critical studies; and satisfaction of Group A in college requirements.

**BIOLOGY** Chemistry 1, 2 or 11, 12 to be taken the freshman year if possible; Physics 11, 12 or preferably 15, 16; Mathematics 19, 20, or Mathematics 21, or Statistics 111, or Statistics 211; Biology 1, 2, 101, 102, 103; Zoology 104, Botany 105; plus three advanced courses selected in consultation with the adviser from among the offerings of several biologically oriented departments.

**BOTANY** Mathematics 21, 22, or Mathematics 21 and Statistics 111, or Mathematics 19, 20 and Statistics 111; Physics 15, 16; Chemistry 16 or preferably 131, 132; Biology 1, 2; Botany 101, 104, 105 and 109 or 160, and two additional semester courses in Botany. Six credits of modern foreign language are strongly recommended. Students may petition the department to substitute other courses for certain requirements in the planning of individual programs.

**CHEMISTRY** Chemistry 11, 12 (or 1, 2 and 123), 131 (3 credits), 132 (3 credits), 134, 135, 141, 142, 201, 202 and 212; Mathematics 21, 22, 121 (or equivalent); Physics 15, 16 or 24, 25.

**COMMUNICATION AND THEATRE** Students may choose one of four options: Communication and Public Address: 11; seven advanced level courses (at least three of which must be at the 200 level), in Communication and Public Address; two additional courses in the department; plus nine hours of related courses.

Mass Communication: 63; eight advanced level courses (at least five of which must be at the 200 level), in Mass Communication; plus nine hours of related courses.

Communication Science and Disorders: one from (11, 14, 31, 41, 81), 74, 101, 270, 271 or 272, 273, 281, one additional course in the Department; plus eleven hours of related courses.

Theatre: thirty-three hours of Theatre courses, including 31, 39, 41, 142, 151, 154, Costuming 240 or 244, and two courses selected from 245, 246, 247, and 248; plus nine hours of related courses.
ECONOMICS  Thirty hours in Economics including 11, 12, 186, 190, three courses at the 100 number level and three courses at or above the 200 level. In addition, students must select nine hours from the other social sciences.

ENGLISH  Twenty-four hours of advanced courses distributed to departmental group requirements; satisfaction of the Group A College requirement; 12 hours (6 in courses numbered 100 or above) in a related field; students are encouraged to take advanced courses in history and classical and modern foreign languages and literature.

ENVIRONMENTAL STUDIES  Students in the College of Arts and Sciences may select a major in the Environmental Program. Consult the appropriate section of this catalog.

GEOGRAPHY  Twenty-seven hours in Geography (including Geography 11, 12, 171, 281, an additional six semester hours at the 200-level and nine other semester hours in Geography); four semester courses in approved related fields.

GEOLOGY  Twenty-seven hours of Geology, including twelve hours at 100 level, and nine hours at 200 level. Twelve hours in Physical Science, Biological Science, Mathematics (Calculus or above), or Engineering. Field experience strongly recommended.

GERMAN  Ten semester courses of advanced level including 101, 102; 281, 282; four semester courses of English; two semester courses of European history to be selected from 10, 11, 12, 233, 234, 235, 236; an advanced related course to be selected in consultation with the department.

GREEK  Twenty-seven hours in courses numbered above 10 among which 111, 112 are required and one course in literature in translation numbered above 100 and one course in Latin above 100 are applicable. Also: History 106, Greek History. A second foreign language: either six hours of Latin at least through the intermediate level or six hours of a modern European language of which at least three hours are at the 100 level or above.

HISTORY  Twenty-seven hours in history (including twelve hours at the 100 level or above of which at least six hours must be at the 200 level), six hours of history outside the United States. Twelve hours work in another discipline or in Area Studies, of which six must be at the 100 level or above, one foreign language pursued to the level of reading knowledge (usually a minimum of one semester at the university intermediate level or demonstration of competence by taking an examination), or a year's work in statistics and quantitative methods (usually Sociology 100 and History 289). History 3 is recommended for majors.

LATIN  Twenty-seven hours in courses numbered above 100 among which 111, 112 are required and one course in literature in translation numbered above 100 and one course in Greek above 100 are applicable. Also: History 107, Roman History. A second foreign language: either six hours of Greek at least through 12 or six hours of a modern European language of which at least three hours are at the 100 level or above.

MATHEMATICS  Thirty-six semester hours of courses numbered 21 or higher, including 124 and at least fifteen semester hours in Mathematics or Statistics courses numbered 200 or above.

MUSIC  1, 2, 5, 6, 105, 106, 221, 222, and six hours of performance study plus senior recital; piano until functional piano facility is achieved (see p. 249);
six hours in another discipline as approved by the department. Students who wish to meet accreditation requirements of the National Association of School of Music will also complete one of the following combinations:
(a) 203, 205 and four advanced courses in music literature.
(b) 203, 205, 208, 215 and two advanced courses in music literature.
(c) 208, advanced course in music literature and twelve additional hours of performance study.

One foreign language through the intermediate level is required of students on combinations (a) or (b).

PHILOSOPHY Twenty-seven hours including (a) 3 or 214, (b) 101 and 102, (c) 201 or 202, (d) at least one of 4, 140, 142, 144, 152, or 240, and (e) a total of at least three 200-level courses in philosophy. An additional nine hours in a related discipline or disciplines is required. Students considering graduate work are urged to study a foreign language.

PHYSICS Twenty-five hours in physics, including 15, 16, or 24, 25; 128, 201 or 202 (not required of students taking 220 and 222 with laboratory), 211 and 213; mathematics through 121. An additional laboratory science and a reading knowledge of French, German or Russian are strongly recommended.

POLITICAL SCIENCE Twenty-seven hours including nine hours selected from the “core” courses (13, 21, 51, 71, 81) and fifteen hours at the level of 100 or above, of which at least nine hours must be at the 200 level; nine hours in a related discipline, of which six must be in courses numbered 100.

PSYCHOLOGY Requirements for the major in psychology are Psychology 1,109, 110, 119, and 12 additional credit hours in Psychology as specified by the department; and 10 additional credit hours in the social and natural sciences.

The department currently specifies that of the 12 additional hours in psychology, a minimum of 6 must be in courses numbered 200 or above.

RELIGION Twenty-seven hours in religion, including 71; two courses chosen from among 101, 104, 108; one course from the 110-129 range (Western traditions); one course from the 130-149 range (Asian traditions); 201; plus nine hours in a related discipline.

ROMANCE LANGUAGES Thirty hours of advanced level courses in French or Spanish, of which at least twelve must be in literature and at least twelve must be in courses numbered above 200. Related area : a minimum of twelve hours of courses from another department or departments chosen in consultation with departmental major advisers and specifically approved by them.

RUSSIAN Nine semester courses at the advanced level to be chosen in consultation with a faculty member teaching in the Russian language curriculum, four semester courses of another language which may consist of combinations of 2 semester courses in English or comparative literature and two semester courses of a foreign language at the 11, 12 level (Serbo-Croatian is strongly recommended for this requirement), plus three semester courses from the Russian and East European Area Studies program (chosen in consultation with major advisor).

SOCIOLOGY Thirty hours in sociology, including a minimum of fifteen hours at the 200 level and six hours in the related fields of anthropology, com-
communications and theatre, economics, geography, history, political science or psychology. Required courses include 100, normally taken by the end of the sophomore year, and one of the following: 273, 274, 275, 278 or 279.

**ZOOLOGY** One semester of calculus; Physics 11, 12 or preferably 15, 16; Chemistry 1-2 or 11-12 to be taken the freshman year if possible; Biology 1, 2; 101, 102, 103; Zoology 104; plus seven hours chosen from Biology 105 and/or 200 level Zoology courses.

**Special Provisions Concerning Credit**

Courses offered in other colleges or divisions of the University of Vermont by departments which offer a major in Arts and Sciences (as approved by the Faculty of Arts and Sciences) receive full credit toward the B.A. degree. Courses offered in other colleges or divisions of the University by departments which do not offer a major in the College of Arts and Sciences may be taken without any limitation by Arts and Sciences students but **only 24 semester hours of such courses may be applied to the minimum 122 credits required for the B.A. degree**. (At the present time, majors in departments outside the College are available in Botany, Mathematics, and the Environmental Program). A minimum of 30 of the last 42 hours must be taken in residence as a degree student in the College of Arts and Sciences.

**III. REQUIRED FOR ALL B.S. STUDENTS**

In addition to the two semesters of physical education required of all students by the University, the following distribution requirements must be met: Each student shall present 6 semester courses (3 credits or more each) selected from at least two of the categories listed below. These categories must be outside the category of the student's major. Departments may specify categories and/or courses (see Specific Departmental Requirements for Majors, below).

**A. LANGUAGE AND LITERATURE**

<table>

</tr>
</tbody>
</table>

*Note:* Linguistics 101, 102 may be considered as meeting the distribution requirements of Category A or B or C at the student's option.

**MAJOR FIELD** Each student, in consultation with an appropriate faculty advisor from his or her prospective major department, must choose a major
field by the enrollment period for the junior year. The specific courses making up the field, as well as the student's entire program for the last two years, are chosen in consultation with the chairman of the department in which the major part of the work is to be taken and must have his approval. The following minimal requirements must be met:

1. The field must be a well integrated whole, adapted to the student's special interest.
2. It must include a minimum of 36 semester hours, at least 18 of which must be in the major discipline. Courses required in the major discipline may not exceed 50 semester hours. No more than 50 semester hours in the major discipline may be counted for graduation. No more than 94 semester hours of the total program, including distribution requirements and major field, may be in specifically designated courses.
3. Courses taken to fulfill distribution requirements may also be counted toward the major credit requirements.

IV. SPECIFIC DEPARTMENTAL REQUIREMENTS FOR B.S. MAJORS

DEPARTMENTAL REQUIREMENTS FOR B.S. MAJOR

CHEMISTRY
Chemistry 11, 12, 131 (3 credits), 132 (3 credits), 134, 135, 141, 142, 184, 201, 202, 212, 213, nine hours of advanced chemistry or biochemistry electives, which may include Chem 197, 198; Physics 15, 16 or 24, 25; Math 21, 22, 121 (or equivalent), Math 271, proficiency in German equivalent to the completion of Intermediate German (German 15, 16). A student with intermediate level proficiency in French or Russian can substitute one year of German (German 1-2).

V. REQUIRED FOR ALL B.M. STUDENTS

In addition to the two semesters of physical education required of all students by the University, candidates for the Bachelor of Music degree must satisfy the distribution requirements described in section I above and the specific requirements indicated below for performance or theory majors.

The Bachelor of Music degree, with a concentration in Performance or Theory, is the initial pre-professional collegiate music degree, designed for students who wish to pursue a career in music as performers, scholars, or private teachers. Such students must develop the skills, concepts, and sensitivity essential to the professional life of a musician. To earn the degree they must demonstrate not only technical competence but also broad knowledge of music and musical literature, sensitivity to musical style, and an insight into the role of music in society. Candidates should possess a high degree of talent, well-developed musicianship, artistic sensibilities and a strong sense of commitment. Graduates will ordinarily continue their studies through post-graduate work before they are fully qualified as professionals. Admission to the Performance major requires an audition with the Music Department. Admission to the Theory major requires evidence of a particular aptitude for, and potential in, musical theory.

**REQUIRED FOR GRADUATION:** 120
plus physical education 2

**Including piano until functional piano facility is achieved. (see page 101).**

### Preprofessional Preparation

Students who plan to enter professional colleges requiring previous collegiate preparation will find the variety of courses offered in the College of Arts and Sciences and the freedom of election in that college is such that all the requirements for any professional school may be met. Many students will desire so to direct their four-year undergraduate courses as to provide, in addition to a sound general education, appropriate preprofessional training for later work in the medical sciences, law, or theology.
Special advising is available in the College for students preparing for careers in education, journalism, law, and medical sciences.

**BIOLOGY** A major in Biology is offered to students enrolled in the College of Arts and Sciences. It has been designed for the student who wishes to concentrate in Biology while pursuing a liberal arts education. It will also serve as a basis for programs leading to graduate study in biological fields and as an appropriate major for students in premedical and predental programs.

The concentration consists of a year of elementary biology and single-semester courses in genetics, ecology, cellular biology, animal structure and function, and plant structure and development. This core is followed by three elective courses selected from a wide range of offerings in biologically oriented departments at the University. A year of chemistry, a year of physics, and mathematics (calculus or statistics) are also required.

**JOURNALISM** Admission to schools of journalism is generally open to academically qualified students who hold the Bachelor of Arts degree with concentration in any discipline. Interested students should take a broad program in the liberal arts, including work in the social sciences, in mass communication, and in English.

**LAW** American law schools, as a rule, require graduation from a four-year college with a Bachelor's degree prior to admission. There is no prescribed curriculum which is requisite for admission, but the student is advised to develop a command of the English language as well as a comprehension of American politics, social, and economic institutions. For further details, kindly consult Professor L. J. Gould, Department of Political Science.

**THEOLOGY** Graduation from a four-year college is prerequisite for admission to most theological seminaries. Although no prescribed curriculum is demanded as preparation for such professional schools, the student is advised to elect substantially from the departments of languages (particularly classics), history, philosophy and religion, psychology, and social studies.

**OPTOMETRY** The requirements for admission to schools of optometry vary, but typically they include courses in English, mathematics, physics, chemistry and zoology with a minimum of two years of college work.

**PHARMACY** Under the Regional Plan (page 27) Vermont residents may prepare for pharmacy school at Connecticut or Rhode Island. This is a five-year program with two years of preprofessional work which includes English, mathematics, botany, chemistry, zoology, physics, social science, a course in fine arts, and orientation to pharmacy.

**MEDICINE AND DENTISTRY** The prevailing requirements for admission to an accredited medical college include a minimum of three years of undergraduate work but most institutions recommend four years. It is strongly urged that a student desiring to enter medical college should during his sophomore year consult catalogues of colleges to which he expects to apply, and arrange to include in his program courses required by those schools.

Each student, in consultation with his adviser, plans a four-year program of courses which will fulfill the requirements for a Bachelor's degree. To meet the **minimum** requirements of most medical colleges, the program should include the following:
Mathematics, one of the following options:

a) Mathematics 21, 22 (recommended for able students)
b) Mathematics 19, 20 (recommended)
c) Mathematics 21 (adequate)
d) Mathematics 9, 11 (adequate)
e) Mathematics 9, 2; 21 or 19, 20 (suggested for students not immediately prepared to enter calculus)
f) Mathematics 7, 8 (not acceptable)

Chemistry, two years minimum, with laboratory
Chemistry 1-2 or 11-12 (recommended for potential Chemistry majors)
Chemistry 131, 132 (required)

Physics, one year minimum, with laboratory
Physics 15, 16 or 24, 25 (recommended for students concentrating in the physical sciences or engineering)

Biology, one year minimum, with laboratory
Biology 1, 2

Students who enter an accredited medical college after three years (90 hours) of undergraduate work may, on application and after completing one year of medical study, qualify as candidates for a Bachelor of Science degree.

The requirements for admission to colleges of dentistry vary, but in all cases include at least two years of college work. In general, the minimum requirements given above should be used in planning a program leading to entrance into a dental school. A student should consult catalogues of the dental colleges to which he expects to apply in order to make certain all requirements are met.

In general, students should avoid taking courses at the undergraduate level in those areas taught at the professional level: i.e., human anatomy, human physiology, microbiology, biochemistry. Many medical colleges now strongly recommend or require that students enroll in courses in the humanities and social sciences.

SECONDARY TEACHING  Students in the College of Arts and Sciences may, upon application to the Dean of Education, be accepted into the teacher training program for secondary education. Application should be made before the end of the sophomore year. The prescribed courses in education, up to 24 credit hours including student teaching, can count as electives towards the Bachelor of Arts. Students completing this program are eligible for Secondary Teacher's Certification.

College Honors

The honors program at both the junior and senior level is designed for the superior student with unusual initiative and intellectual curiosity, and provides an opportunity to pursue a special project without the restrictions of classroom routine. Such a student enters a program of reading, research, or creation under the direction of the department of his choice. A student may take honors in either or both years.

A student in the College of Arts and Sciences who, at the end of his junior year, has an average of 3.00 or above for the work of the sophomore and junior years may become an applicant for college honors in a particular subject. His program for the senior year must be approved not later than the end of the junior year by the department in which honors are sought and by the Committee on Honors, and he must present a satisfactory written report and pass an oral examination on the field of special study.
A program called junior honors, which may be considered introductory to but distinct from college honors, is available to juniors who have a sophomore average of 3.00 or above and who have the permission of their department chairmen. The program for each junior honors candidate will be determined by the department concerned.

Departmental Honors

A senior whose overall average is 2.50 or above, or who has been specially recommended by the department in which he is concentrating, is eligible to take a comprehensive examination. Upon successfully completing the examination he will be granted his degree "with Departmental Honors." Some departments have instituted seminars or other programs designed to help the student gain the requisite breadth and depth of knowledge.

The Center for Area Studies

The Center for Area and International Studies is an inter-department activity, with a Director and five programs, each of which has its own Director. The purposes of the Center are to encourage and coordinate interdisciplinary and comparative study and research for selected foreign areas. The Center also sponsors interdisciplinary seminars and guest lectures. The Center for Area Studies administers the program of concentration in Area Studies and offers the B.A. degree in the College of Arts and Sciences, based on the successful completion of courses in several academic disciplines with concentration in one of five foreign areas: Asia, Canada, Latin America, Russia, and Eastern Europe and Western Europe. Requirements for concentration include the general distribution requirements in the College of Arts and Sciences, the foreign language of the selected area (Chinese or Japanese, French, Spanish, Russian or Serbo-Croatian), usually through the intermediate level; several options of courses in the social sciences and humanities related to the selected area; and specialized area courses, reading and research, college honors, and area seminars based on team teaching and supervised research. Special courses offered for Area Studies include: "College Honors"; "Special Topics"; "Readings and Research"; and "Seminar."

Study Abroad

The office of the Coordinator of Overseas Programs at 479 Main Street maintains information about overseas study programs and conducts arrangements for foreign study with the student's academic advisor and his/her dean. The office also assists in the evaluation of credits for study abroad. Students interested in overseas study are urged to contact the Coordinator's office.

In addition to providing information about hundreds of overseas study programs, the university offers the following programs in which it has a direct involvement:

—The Vermont Overseas Program at the University of Nice in France provides a year of study abroad for a selected group of undergraduates from the University of Vermont and from other colleges and universities. Intended
primarily for students concentrating in French, the program is also open to qualified students from other fields, such as the fine arts or the social sciences. Student selection will be based on the following criteria:

1. Sophomore, junior or senior class standing with a minimum grade point average of 2.0 (C).
2. A working knowledge of French.
3. An interest in and potential for capitalizing on a year of study abroad.
4. A sound educational program.
5. Creditable personal qualifications.

Upon the successful completion of his/her work, the student receives appropriate credit (usually thirty hours) toward his/her degree. For further information about the Vermont Overseas Study Program, an interested student should speak to his/her academic dean or to the director of the program.

—The University is a member of the Intercollegiate Center for Classical Studies in Rome. Properly qualified students may attend one or two semesters at the Center and receive full credit. For further information consult with the chairperson of the Department of Classics.

—The University of Vermont French Canadian Studies Program at the University of Quebec, Three Rivers campus: A six weeks course of study designed to acquaint American students and teachers with the distinctive cultural, social, and political features of French Canada. The program will offer a total of six credits in advanced French language, in French Canadian Literature and in a sociological-historical and geographical study of French Canada. All instruction will be carried on in French and both undergraduate and graduate credit will be available. For further information contact the Department of Romance Languages.

—Issues in Contemporary Education: Seminar Abroad-Education in England: This program is designed to offer students something more than the usual "study abroad" program. It offers an opportunity for each student to relate his or her professional needs, interests, goals, and aspirations to a specific educational program. There will be opportunities to visit many areas of cultural and personal interest. In addition, the student will live with a family in England and work as a paraprofessional in one or more of the host nation's schools. Time allowed for independent travel. Participants will be affiliated with a teacher training college in England. Contact David Shiman, College of Education and Social Services.

—Scandinavian Seminar: A total cultural immersion program consisting of a year's study in folk schools in Norway, Denmark, Sweden, or Finland. No prior language competency required. Apply to this national program through the Coordinator's office.

—Caribbean program. Individual placement of small numbers of students in this area of the world is being developed.

The Government Research Center

The Government Research Center, established in 1950 as the Government Clearing House, provides research and informational services for students, state
and local officials, members of civic groups, and the public. Activities include the following: developing opportunities for students to become acquainted with, and to gain practical experience in, the operation of government, maintaining liaison with state and local officials relative to the use of University resources in the study of problems in state and local government; operating a public affairs research center, conducting research projects, and publishing studies in state and local government; and preparing background materials for conferences on public questions.

Many of the activities of the Government Research Center are sponsored in cooperation with state officials, local officials, or civic groups. The annual Listers' Schools are sponsored jointly with the Governor and the Vermont State Tax Department. Many state and local officers participate in the series of one-day Town Officers Educational Conferences, which originated in the late 1930's and which are held annually in several locations throughout Vermont. A two-day conference on citizenship, in which high school juniors, high school faculty members and administrators, and University personnel participate, has become an annual event, with the cooperation of the State Department of Education and various educational associations.

A Public Affairs Library collection is maintained as a memorial to the late James P. Taylor, whose effort to expand citizen interest in effective government is well known throughout the State. The Government Research Center also sponsors the annual Taylor Town Report Contest in Vermont and cooperates with the New England Council relative to the region-wide contest.

The Government Research Center is a program of the Department of Political Science.

The College of Education & Social Services offers four-year curricula leading to the following degrees: Bachelor of Science, Bachelor of Science in Education, Bachelor of Science in Music Education and Bachelor of Science in Art Education.

Undergraduate Programs are offered in:

Art Education — Gr. K-12
Elementary Education — Gr. K-12
Music Education — Gr. K-12

Physical Education — Gr. K-12
Secondary Education — Gr. 7-12
Social Work

These curricula are designed to prepare teachers for the kindergarten-elementary level, junior high schools, and assignments calling for subject specialties in elementary, secondary, and twelve-grade situations. Programs are composed of general education, professional education, and professional laboratory experiences.

The College of Education and Social Services has developed programs in the area of reading-language arts, early childhood, and special education. The American Primary Experimental Program is a program that prepares teachers for grades kindergarten through third (K-3). The Responsive Teacher Program is designed to prepare elementary and secondary regular classroom teachers with special competencies for enhancing the social, personal and academic growth of handicapped learners. Any student who desires early childhood or responsive teacher education certification endorsement, must be enrolled in the College of Education and Social Services. The faculty-student advising process individualizes the program to the student’s specific interests and career goals. Upon completion of their sophomore year, students may enter
one of these specialized programs for the last two years of their undergraduate career. Additional information may be obtained from Mr. Zacharie Clements — Reading and Language Arts; Mr. Charles Rathbone — Early Childhood and APEX; and Mrs. Carol Burdett — Responsive Teacher Program. Programs are also available for individually designed majors and for careers in interdisciplinary Social Services and Education.

Effective with the Class of 1977 the required graduation cumulative average is 2.0. It is required that students achieve a cumulative average of 2.50 in the major field and education class work, as a prerequisite to approval for Student Teaching also effective with the Class of 1977.

The College of Agriculture and the School of Home Economics offer, in cooperation with the College of Education and Social Services, programs in Home Economics Education, Occupational and Extension Education and Applied Technology and Agricultural Engineering. For further information refer to sections in this bulletin describing the College of Agriculture, Department of Vocational Education and Technology, and School of Home Economics.

General Education Requirements

Each student in the College of Education & Social Services is required to select a minimum of sixty credit hours from the following five general areas, with the restriction that at least one course must be selected from each area, and taken for a letter grade. General Education courses required for certification such as English and Social Science or the University requirement of two semesters of Physical Education activities may be used to satisfy the general education requirement in that area. Students may also apply required courses in their Major and Minor, Broad Field, or Area of Concentration, to meet requirements in general education.

I. Arts and Letters
   a. Art
   b. Classics
   c. Communication and Theatre
   d. English
   e. Music

II. Science and Mathematics
   a. Biology
   b. Botany
   c. Chemistry
   d. Computer Science
   e. Geology
   f. Environmental Studies
   g. Mathematics
   h. Physics
   i. Statistics
   j. Zoology

III. Social Sciences
   a. Anthropology
   b. Economics
   c. Geography
   d. History
   e. Political Science
   f. Psychology
   g. Sociology

IV. Humanities
   a. Foreign Language
   b. Philosophy
   c. Religion

V. Health and Physical Education
   a. Health Education
   b. P.E. Methods
   c. Selected Activities
Students in each teacher education program, beginning with the Class of 1974 (with the exception of those in Music Education), are allowed to include in their program the Personal Component (Ed. 198). The personal component offers students an opportunity to pursue an activity under self-direction. Each student is required to state the objectives for his study, to make a contractual arrangement with his personal component advisor, and to fulfill the terms of the contract. Options such as education colloquia, community action experience, seminars and discussion groups, individual counseling and group counseling, are available — Ed. 198 is open only to UVM students enrolled in the Teacher Education Program. It is suggested for Freshmen and Sophomores. All others with consent of the instructor.

ADMISSION AND ACCREDITATION

The College of Education & Social Services has the responsibility for maintenance of standards approved by the National Council for the Accreditation of Teacher Education (NCATE). Initial admission of students is to the University of Vermont College of Education and Social Services — admission to the teacher education program occurs after special tests in communication skills and other screening measures are administered. Students must also meet personal, academic, and professional criteria established for teacher education candidates. This admission procedure is in accordance with the College's standards as approved by the National Council for the Accreditation of Teacher Education.

All teacher education candidates are expected to complete admission procedures before the beginning of the junior year in order to fulfill degree requirements. Throughout one's program the Coordinator of Educational Career Planning, whose office is in 237 Waterman Building, will assist students in career planning and placement.

The programs to be described are the programs through which the UVM College of Education and Social Services achieves accreditation by the National Council for Accreditation of Teacher Education and the Vermont State Department of Education Program Approval Plan. Students completing an NCATE accredited program are qualified to receive certification in most states. Those completing a program evaluated through the Vermont State Department of Education's Program Approval Plan will have reciprocity certification in neighboring states. Further information may be obtained from the Student Personnel Services Center, 306 Waterman Building.

ELEMENTARY EDUCATION
Kindergarten through Six

The elementary education program is designed to prepare teachers for assignments in grades Kindergarten through Six. The Bachelor of Science in Education is awarded upon satisfactory completion of our approved program. The program includes a planned sequence of professional courses and laboratory experiences. Upon completion graduates are eligible for Vermont teaching certification.

Elementary teacher certification for prospective teachers in grades K-3 may be obtained by enrolling in the Early Childhood Education Program (APEX) in the College of Education and Social Services. Early Childhood Development programs in the School of Home Economics provides certification for Grade K.

The elementary education curriculum includes a general component of sixty credits selected from the following academic areas: Arts and Letters, Science and Mathematics, Social Sciences, Humanities, and Health and Physical Education (two semesters of Physical Education activities are required). Electives may be used to build an area of concentration of twenty-four to thirty-three credits.
Specific information about academic majors or general education requirements may be obtained from advisors or from the Student Personnel Services Center, 306 Waterman Building.

The professional programs begin by introducing the student to education as a field of study. The student is made aware of the social foundations and relationships of education as well as the resources available concerning the field. Emphasis is placed on the need for examining educational literature and research as part of the process of making critical judgments. Continuous field experiences are available throughout the four years. The program also includes special content courses for elementary teaching. Information concerning field experiences (deadlines, requirements, etc.) may be obtained from the Coordinator of Professional Laboratory Experience, 237 Waterman Building.

In addition to the academic and professional requirements, certain courses are recommended to meet specific state and national requirements in elementary education. These are specified in the typical program.

A minimum of 127 approved semester hours is required for the degree.

*Recommended to meet specific state and national certification requirements.
SECONDARY EDUCATION
Seven through Twelve

The secondary education program is intended to prepare teachers for junior and senior high schools in Vermont and other states. The Bachelor of Science degree is awarded upon satisfactory completion of an approved program. Upon completion graduates are eligible for Vermont teaching certification.

The secondary education curriculum includes a general component of a minimum of sixty credits selected from the following five academic areas: Arts and Letters, Science and Mathematics, Social Sciences, Humanities, and Health and Physical Education (two semesters of Physical Education activities are required). The student must use electives during the four years to build major and minor fields of study or a Broad Field major. Students may apply required courses in their majors and minors or Broad Field to meet requirements in general education. Specific information about academic majors or general education requirements may be obtained from advisors or from the Student Personnel Services Center, 306 Waterman Building. The program includes a planned sequence of professional courses and laboratory experiences.

TEACHING FIELDS

All teacher education candidates must have, prior to their student teaching, at least 30 credit hours in a teaching major and 18 hours in a teaching minor or at least 48-50 hours in a Broad Field major. The following are current approved majors, minors, and Broad Field majors (detailed outlines, developed in cooperation with the respective departments, are available at the Student Personnel Services Center, 306 Waterman Building).

MAJORS Biological Science, Chemistry, Communication and Theater, Earth Science, English, French, Geography, German, History, Latin, Mathematics, Physical Science, Physics, Spanish.

BROAD FIELD MAJORS Natural Science, Social Studies, Environmental Studies.

Students should select majors and minors which are logically related and which commonly occur as teaching combinations in secondary schools. The major-minor or Broad Field program must include credits in advanced courses.

EXPERIENCES IN PUBLIC SCHOOLS Students in secondary education usually have direct experiences in public schools throughout the four-year curriculum. Students observe and participate as teacher assistants in local junior and senior high schools. During the senior year students devote sixteen continuous weeks to full-time teaching in public secondary schools. In most cases, students must arrange to live off-campus during the student teaching assignment.

Applications for all field experiences must be made one semester in advance of assignments, and the student must assume responsibility for meeting deadlines. Information about application and assignment procedures may be obtained from the Coordinator of Professional Laboratory Experiences, 237 Waterman Building.

*Recommended to meet specific state and national certification requirements.

A minimum of 124 approved semester hours is required for the degree.

Students are responsible for obtaining information regarding teacher certification and degree requirements from the appropriate College of Education and Social Services offices.

**ART EDUCATION**

*Kindergarten through Twelve*

The program in Art Education qualifies candidates to teach art in grades K through 12. Students fulfill general education requirements and complete 42 hours in professional art education and required education courses, 45 hours minimum in studio art, art history, and related subjects. Graduates satisfy College of Education and Social Services requirements for teacher certification, and College of Arts and Sciences requirements for an Art Major. The program allows sufficient additional advanced courses as recommended by the Art Department for admittance to Graduate School.

Students must be enrolled in the College of Education and Social Services. Those admitted as freshmen or sophomores to the Art Education Program are
considered Candidates in the Program. Admission as Majors is made at the beginning of the junior year following formal review procedures during second semester of sophomore year.

A typical program is as follows:

Students are responsible for obtaining information regarding teacher certification and degree requirements from the appropriate College of Education and Social Services offices.

MUSIC EDUCATION
Kindergarten through Twelve

The curriculum in music education, leading to the degree of Bachelor of Science in Music Education, is recommended to students who have sufficient training and natural musical ability to justify a career in music. Graduates are qualified for positions as instructors and supervisors of music in the public schools.

The Department of Music is a member of the National Association of Schools of Music, and all its degree programs are accredited by the NASM.

The program includes a general component of sixty credits selected from the following five academic areas: Arts and Letters, Science and Mathematics, Social Sciences, Humanities, and Health and Physical Education (two semesters of Physical Education activities are required). Students may apply required courses in Music to meet the general education requirements.
The prescribed program is:

¹ Until functional piano facility achieved (See Performance, Page 101).
² To meet General Education distribution requirements.
³ A second performance field may be substituted for one ensemble.
⁴ Students intending to concentrate on elementary school work may wish to take Music 112 in addition to this methods course.

A minimum of 128 approved semester hours is required for the degree. Students should pass the piano facility examination prior to student teaching. Students are responsible for obtaining information regarding teacher certification and degree requirements from the appropriate College of Education and Social Services officers.

### THE RESPONSIVE TEACHER PROGRAM

The Responsive Teacher Program is a two year concentration for students majoring in elementary, secondary or physical education. This program trains regular classroom teachers with special education skills. The Responsive Teacher is trained to educate all children through individual teaching/learning procedures. Using a data-based individual model of instruction the Responsive Teacher
learns to set goals for all students and assures that these goals are met by use of individualized instruction and the application of behavior analysis theory.

Candidates for the Responsive Teacher Program are chosen at the end of their sophomore year and must meet specified entrance requirements. The competency based program begins in the fall of the junior year with a consecutive two year schedule, in addition to the regular elementary or secondary program. Responsive Teachers-in-Training attain competencies in specifying minimum objectives in the basic skill areas, measurement systems, individualized instruction and learning theory. A full time commitment is expected of each Responsive Teacher-in-Training during the spring semester. Working with a partner, they spend each morning in a classroom where at least one child has been designated as eligible for special education services. Each afternoon students engage in course work and seminars designed to increase the rate of learning for Vermont's eligible children. During their senior year Responsive Teachers-in-Training will spend a full semester student teaching in a Vermont classroom that contains at least one child eligible for special educational services.

Students who graduate from this program will be certified as regular elementary or secondary teachers and as Responsive Teachers will be competent to teach in regular Vermont classrooms that contain children eligible for special services.

Questions concerning the Responsive Teacher Program should be directed to Coordinator of Responsive Teacher Program, Special Education Area.

The program must contain these courses:

<table>
<thead>
<tr>
<th>Junior Year</th>
<th>1st SEMESTER</th>
<th>2nd SEMESTER</th>
<th>Senior Year</th>
<th>1st SEMESTER</th>
<th>2nd SEMESTER</th>
</tr>

<tr>
<td>Responsive Teacher Practicum (EDSP 160)</td>
<td>—</td>
<td>6</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

A minimum of 127 approved semester hours is required for the degree. Students are responsible for completing all certification requirements at the elementary and secondary level.

SOCIAL WORK AREA

SOCIAL WORK Provides education for social work practice based on a liberal education in the Social Sciences and Humanities. Career opportunities in the field of social work are explored. The student, in consultation with his advisor, selects elective courses which will give him the opportunity to develop his individual interests. A minimum of 122 credit hours of prescribed and elective courses is required for graduation.
Usual sequence of courses:

Freshman-Sophomore Years
Prerequisites for SOSE 166
  Political Science (21 or 11)
  Economics (3 or 11)
  Sociology 10
  Psychology I

Professional Courses
  SOSE 2 Foundations
  SOSE 15 Participation (optional)
  SOSE 51 Human Needs and Social Serv. (optional)
  SOSE 166 Soc. Welf. as Soc.-Inst.
  SOSE 167 Racism & Contemp. Problems

Electives

Distribution Requirements
  (may be taken any time)
  English (any course)
  Humanities (any course)
  Biology 3 (or 1 or 2)
  P.E. Activities

Junior Year
Professional Courses
  SOSE, 168 Soc. Work as a Profession
  SOSE 169 Sequence to 168
  SOSE, 291 Soc. Research Methods

Electives

Senior Year
Professional Courses
  SOSE 170 Field Experience
  SOSE 292 Special Problems

Electives

Recommended Electives
  Additional courses in:
    Psychology
    Sociology
    Education
    Human Development

The B.S. degree in Social Work requires a minimum of 122 approved credit hours (including 2 credits for P.E. activities) with grades of 2.5 or better in professional courses and prerequisites and a cumulative average of 2.0.

A student must make formal application for admission to the professional Social Work Program after completion of sophomore year.

PHYSICAL EDUCATION
Kindergarten through Twelve

The physical education curriculum, open to men and women, includes a selection of courses from within the broad areas of General Education, General Professional Education, Specific Professional Education, (including the physical education major and minor, if selected), and unstructured electives. Graduates are awarded a degree of Bachelor of Science in Education upon the completion of a 130 semester hour program.

The major program in physical education qualifies candidates to teach physical education in grades K-6, 7-12, K-12 depending upon the major option selected. Candidates may opt for a 30 credit specialty for teaching physical education in elementary schools, or a secondary school specialty. In either instance the candidate also selects an 18 credit area of concentration (minor). A third option provides for a 50 credit broad field major which prepares students for teaching in grades K-12 and includes introductory courses in Health and Recreation. There is no minor requirement with the broad field major. Candidates in all three major options will earn a minimum of eight (8) credits in activity skill courses where they will demonstrate competency in a variety of sports from intermediate to advanced levels.

Individually designed major concentrations in Health Education and Recreation Education Services are available to selected students, working through a planned core of courses. The health program certifies the student to teach health
in the public schools, K-12; additional options in public and community health are in the planning stages. The recreation program offers a choice of concentrations in either community-School Recreation or Therapeutic Recreation. Both the health and recreation programs are interdisciplinary in nature. Students interested in these programs should contact Dr. Robert Gobin in Physical Education for more information.

All physical education majors will be required to purchase a special instructors uniform.

A typical broad field program is as follows:

<table>

1 Humanities (any Philosophy, Religion, or Foreign Language course)
2 Science (Select from Biol., Bot., Zo., Chem., Physics, Psych., Soc. or Math.)
3 Social Science (6 credits from Hist. 23, 24, PSci 11, 12, 21)
4 Anat. & Physiol. (Zo. 5 & 6, Anat. 9 & Physiol. 10, or Physiol. 100 & 101)
5 Fourth year fall and spring semesters interchangeable

Note: No more than 50 credits in major theory courses included in the 130 credit graduation requirement.

Physical Education majors will present a minimum of 130 approved semester hours for the degree.

Students are responsible for obtaining specific information regarding degree requirements and teacher certification from the appropriate College of Education and Social Services office.

FIFTH-YEAR CERTIFICATE IN EDUCATION

A special fifth-year program culminating in a certificate of advanced study is offered for students who wish to work beyond the bachelors degree but who
need or desire more flexibility than is possible in any of the standard programs for master's degrees.

The certificate program is especially designed to meet the needs of teachers who are developing new teaching fields, for advanced students who are meeting requirements for state certification, and for experienced teachers who desire flexibility in choice of courses at both graduate and undergraduate levels.

Each certificate program is individualized to fit the qualifications and the professional objectives of the candidate. Undergraduate courses may be approved for the program when such courses appropriately support the candidate's professional objectives.

The program for the *Fifth-Year Certificate* is governed by the following regulations:

1. Candidates must hold a bachelor's degree.
2. Candidates must make written application on forms obtained from the Office of the Dean of the College of Education and Social Services.
3. Candidates are admitted to the program by action of a faculty committee.
4. A maximum of twelve credits may be applied to the program at the time of admission.
5. A maximum of nine credits may be transferred from other institutions.
6. Credits for the program may be earned in the regular academic year, the Summer Session, and the Evening Division.
7. The program for each candidate must include a minimum of thirty credits approved by a faculty adviser.
8. A minimum mark of C must be made in any course which is to be included in the program.
9. No comprehensive examination or formal thesis is required for completion of the program, but the candidate will submit a culminating paper under the direction of his faculty adviser.
10. The program must be completed within seven years after the time of admission.

Requests for further information about fifth-year programs should be directed to the College of Education & Social Services Student Personnel Services Center, 306 Waterman Building.

**CERTIFICATE OF ADVANCED STUDY**

A Certificate of Advanced Study (sixth year certificate), a 30-36 graduate credit hour program beyond the Master's Degree, is offered by the College of Education and Social Services in the field of Administration and Planning and Counseling. The C.A.S. has become a professional requirement in the hiring and advancement of administrative, supervisory, and other personnel in many school districts throughout the United States and since 1965 has been a prerequisite for membership in the American Association of School Administrators (AASA). The program requires a nine credit on-campus residency unit which must include a three credit hour laboratory experience. Residency may be fulfilled during any academic semester or summer and is part of the total 30-36 program credits. Further information may be obtained from the College of Education and Social Services.

**INTERNATIONAL EDUCATION FIELD STUDY**

The College of Education and Social Services now offers a comparative education field experience in England and has plans to develop programs in other parts of the world.
The purpose of these programs is two-fold: 1) to provide an in-depth experience in the educational system of another country; and 2) to give the students an opportunity to live in a society different from their own.

Traveling abroad has a number of advantages. First, it broadens the outlook of the person involved in the experience whether it be social, educational, or political. Second, it affords one an opportunity to observe people in their indigenous environment. Third, it allows for an exchange of ideas and philosophies. Finally, it adds a new dimension to one's life in being able to share one's thoughts and feelings with others of a different culture.

Specifically, the field experience in England is designed primarily to offer students something more than the usual "study abroad" program. In addition to the usual visits to places of local cultural interest, this program offers an opportunity for each student to relate his professional needs, interests, goals and aspirations to a specific educational area. Students will have the opportunity to visit many areas of cultural and personal interest but, in addition, will live with a family in the host country and work as a paraprofessional in one or more of the host nation's schools.

For further information contact Coordinator, International Education Program, University of Vermont, College of Education and Social Services, Burlington, Vermont 05401.
The College of Engineering, Mathematics and Business Administration

The College of Engineering, Mathematics and Business Administration includes the Departments of Business Administration, Civil Engineering, Electrical Engineering, Mechanical Engineering, and Mathematics and the programs in Computer Science and Statistics. The College offers professional curricula in the following general areas:

1. business administration and management science
2. engineering and applied science
3. mathematical sciences

The specific programs and degrees offered are:

<table>

</tr>
</tbody>
</table>

These programs provide a basis both for professional practice and for graduate study in the fields indicated. In addition, they offer excellent preparation for advanced professional study, in such areas as business, law, and medicine. Details are given in the sections which follow.

Professional Education

Graduates of professional schools are expected to fulfill unique and significant roles in planning and directing the work of the world and in effecting and managing change. The primary objective of professional education is, therefore, to develop skill in the "problem solving art." This includes not only intellectual knowledge of complex and high order, but also the intelligent and intuitive application of that knowledge to the situations of life.

Professional graduates must have the ability, the confidence, and the self-discipline to identify and define a problem, break it down into operable components, marshal the necessary resources from the natural
and social sciences, mathematics and the humanities, and to employ these resources in a systematic, effective, and efficient fashion to derive a useful solution. To enhance and promote these qualities in students, the College's curricula all emphasize the balanced development of conceptual understanding and specific skills.

The professional graduate is also often required to act on the basis of incomplete knowledge and with limited time and resources. The College therefore requires that its students exhibit certain personal qualities in addition to the intellectual achievement expected of all university graduates. Foremost among these are integrity, acceptance of responsibility, and reliability in independent work.

The College is also committed to the idea that learning is a life-long endeavor. Our undergraduate programs therefore provide a base upon which students may build as the demands of their professional careers increase and their personal interests broaden.

General Requirements and Academic Regulations

DIVISIONS

All undergraduate programs in the College of Engineering, Mathematics, and Business Administration are divided into lower and upper divisions. The lower division comprises the first two (freshman-sophomore) and the upper division the last two (junior-senior) years. Each upper division curriculum is administered by one of the College's departments or programs or by an affiliated department elsewhere in the University.

Students who wish to complete one of the upper division programs must apply for admission to that program during the spring semester of their sophomore year (or after completing 45 credits and prior to the completion of 60 credits). In order to be admitted to an upper division program, applicants must:

(a) be in good academic standing in the lower division of the College or in another college of the University. Where appropriate, applicants for transfer from colleges outside UVM will be considered for admission to the upper division simultaneously with consideration of their application for admission to the University.

(b) meet specific requirements established by the department or program responsible for the upper division curriculum to which they seek admission. These requirements may include (1) the completion of specific prerequisite courses, and (2) a grade-point average in these prerequisite courses higher than the minimum required to remain in good academic standing.

HUMANITIES AND SOCIAL STUDIES

The objective of the requirements in humanities and social studies for all programs is to broaden the student's understanding of man and the relationships in human society.

Each Freshman student should, in consultation with his advisor, make a preliminary plan of an integrated sequence of courses based on his own interest. The sequence should constitute a continuing program extending through at least three undergraduate years. At the end of the first year the student will declare his
elective area of concentration and, in consultation with his advisor, will prepare a plan of an integrated sequence of courses. A minimum of nine credit hours is required in the elective area of concentration.

ELECTIVE AREAS
1. Language
2. Literature
3. Fine Arts
4. Philosophy
5. Social Sciences

No credit is given for a "dash course" unless the second semester is completed. Credit for elementary language courses is granted for degrees in the College only if the intermediate level course is also satisfactorily completed.

The College has a minimum requirement of 18 credit hours of humanities and social studies courses for the B.S. degree but specific programs may require more than this minimum.

PHYSICAL EDUCATION
In addition to the course requirements listed for each curriculum, all students must satisfactorily complete two credits in physical education.

ENVIRONMENTAL STUDIES
Freshmen who wish to concentrate in environmental studies in EMBA, must enroll in the engineering core curriculum. See Page 95.

CREDIT FOR MILITARY STUDIES COURSES
Military Studies 1, 2, 11 and 12 are approved in the category of humanistic social studies for all programs in the College. The College Studies Committee acts on petitions for credit for other Military Studies courses, which may be utilized as free electives only.

CREDIT FOR MILITARY SERVICE
The College of Engineering, Mathematics and Business Administration does not, in general, grant credit for Military Service. Credit for specific courses or other academic experience acquired during Military Service may be available through petition to the Studies Committee.

TRANSFER CREDIT
Transfer credits from other institutions are not used in the calculations of the University of Vermont grade-point average (GPA). Students who wish transfer credit must obtain approval from their departments.

ACADEMIC STANDARDS
Students who receive a cumulative or semester GPA (grade-point average) of less than 2.0 will be placed on trial. Students who have failed half their course credits for any semester, or who have had two successive semesters with less than a 2.0 cumulative GPA, are eligible to be dismissed.

Business Administration

The Department of Business Administration offers a program leading to a Bachelor of Science degree in Business Administration. The curriculum is designed to provide the student with a broad background in the fields of knowl-
edge useful for managerial decision making and additionally considerable exposure to the Humanities and the Social, Physical and Mathematical Sciences. The core program required of all students provides:

A. A background of the concepts, processes, and institutions in marketing and distribution, production, and financing functions of business enterprise.
B. A background of the economic and legal environment of business enterprise along with consideration of the social and political influences on business.
C. A basic understanding of the concepts and methods of accounting, quantitative methods, and information systems.
D. A study of organization theory, interpersonal relationships, control and motivation systems, and communications.
E. A study of administrative processes under conditions of uncertainty including integrating analysis and policy determination at the overall management level.

Beyond this core, study in a specialty option allows the student to pursue in more depth a functional area of interest to him. The areas available are Accounting, Finance, and Banking, Marketing Management and Sales Promotion, and Management.

The Department of Business Administration cooperates with the Department of Mechanical Engineering in offering courses in the Management Engineering Curriculum. This curriculum is administered by the Department of Mechanical Engineering and is described in the section on engineering curricula.

The Accounting option is registered with the University of the State of New York, The State Education Department, Albany, N.Y. Students completing the requirements of the accounting option will be eligible for admission to the New York State licensing examination in Certified Public Accountancy.

A minimum of 122 approved semester hours is required for the Bachelor of Science in Business Administration degree, including required courses in physical education.

Distribution Requirements

1. Each student shall present nine semester courses (3 credits, or more, each) by choosing three courses from each of any three of the following four categories (labeled a, b, c and d below). No courses required in the Business Administration program may be used to fulfill distribution requirements.

a. Language and Literature
   - English
   - French
   - German
   - Greek
   *Hebrew
   *Italian
   *Latin
   Literature in Translation

   *No distribution credit is allowed for courses taken in a foreign language unless at least one course in that language, at the intermediate level or above, is taken and passed.

b. Fine Arts and Philosophy
   - Art
   - Drama
   - Music
   - Speech
   Philosophy
   Religion

c. Social Sciences
   - Anthropology
   - Economics
   - Geography
   - History
   Political Science
   Psychology
   Sociology
d. Sciences and Mathematics
   Biology
   Botany
   Chemistry
   Engineering and Technology
   Geology
   Physics
   Zoology
   Mathematics
   Statistics
   Computer
   Sciences

2. Majors in Business Administration are required to complete a minimum of 48 hours (including the 27 hours of distribution requirements) in nonbusiness courses. Nonbusiness courses required in the business program may not be used to satisfy this requirement.

   Freshman-Sophomore Core
   Majors in Business Administration will normally take the following courses before enrolling in Junior-Senior core courses.

<table>

Engineering

The College of Engineering, Mathematics, and Business Administration offers accredited, professional programs in civil, electrical, mechanical, and manufacturing and management engineering. Alternatively, students may elect one of several interdisciplinary or topical curricula under the general Bachelor of Science in Engineering degree program (page 100).

Engineering education at UVM combines the study of mathematics and the physical and engineering sciences with courses illustrating their application to the analysis and design of equipment, processes, and complete systems. In addition, students are encouraged to avail themselves generously of the life science, social science, and humanities courses available throughout the University. The breadth and flexibility of the engineering programs provide a sound background for engineering practices in private or public domains, for graduate study in engineering or science, and for further professional study in such fields as business, law, or medicine.
The required courses in each curriculum are normally arranged for a four-year program. These courses may be arranged in a five-year sequence if desired. Also the course can be arranged to accommodate transfer from other curricula.

Departments may require students to visit Northeastern industrial centers during their junior year. The expense for the trip of several days is borne by the student.

Students enrolled in the civil, electrical, and mechanical engineering curricula may become affiliated with their respective national professional engineering societies, the American Society of Civil Engineers, the Institute of Electrical and Electronics Engineers, and the American Society of Mechanical Engineers, as each organization has authorized a student chapter at the University of Vermont. Engineering students demonstrating high scholarship attainment combined with exemplary character are recognized by membership in the Vermont Alpha Chapter of Tau Beta Pi, the national engineering honor society. These student organizations' meetings present opportunities for students to conduct activities similar to those of the national societies. These include: technical papers presented by students and engineers actively engaged in their profession; attendance at conventions; and inspection trips. These provide helpful contacts with engineering practice and assist in the development of leadership qualities essential to success in the engineering profession.

The curricula in civil, electrical, mechanical, and manufacturing and management engineering are accredited by the Engineers' Council for Professional Development.

**CIVIL ENGINEERING**

The curriculum in Civil Engineering, leading to the degree of Bachelor of Science in Civil Engineering offers instruction in community planning, environmental engineering, hydraulics and hydrology, soil mechanics, structural engineering, and transportation engineering, as well as in the engineering sciences, mathematical sciences, natural sciences, humanities, and the human and social sciences. Every candidate for this degree must earn a minimum of 122 semester hours of credit including the required courses in physical education.

Each student, with the approval of his advisor, must present a program of courses and study that satisfies the distribution requirements in the Group I, Group II, and Group III categories that follow:

A. Group I. A student must elect nine courses from this group, by choosing at least three courses from each of two of the designated areas. The three remain-
ing courses may be taken from any area or areas in this group. In fulfilling the requirements of this Group, the student must meet the Engineering Departments' requirement of 18 hours in Humanities and Social Studies.

**Group I Areas**

- Business Administration
- Anthropology
- Education
- Economics
- Languages
- Geography
- Literature
- History
- Fine Arts
- Political Science
- Philosophy
- Psychology
- Sociology

B. Group II. A student must elect sixteen courses from this group by choosing at least three courses from each of three of the designated areas. The seven remaining courses may be taken from any area or areas in this group. Group II courses must include CE 1, CE 2, and either EE 100 or ME 113.

**Group II Areas**

1. Engineering Sciences
2. Mathematical Sciences
3. Natural Sciences—Earth, Life, Physical

C. Group III. A student must elect fifteen courses from this group, by choosing at least three courses from each of two of the designated areas in Civil Engineering and by choosing at least two analysis courses and one design course from Structural Engineering. An additional three courses are to be selected in Civil Engineering, other engineering, or mathematics. The remaining three courses may be from any area or areas in this group, but they must contribute to his program objectives.

**Group III Areas**

1. Civil Engineering
   - Community Engineering
   - Environmental Engineering
   - Hydraulics-Hydrology
   - Soil Mechanics
   - Structural Engineering
   - Transportation Engineering
2. Other Engineering
3. Agriculture
4. Medicine
5. Other Professions
6. Special Areas of Support, such as mathematics, natural sciences, etc.

**ELECTRICAL ENGINEERING**

The general accredited degree curriculum for Electrical Engineering students is provided in detail below. In addition, there are three options within the accredited program as follows:

1. Computer Engineering Option
2. Pre-Medical Option
3. Co-Op Program

The curriculum modifications associated with these first two options are indicated by corresponding numerical superscripts over the appropriate courses and paragraphs following the general curriculum.

The Computer-Engineering Option is designed to permit a high concentration of courses in the computer design field; the Pre-Medical Option allows the student to take courses sufficient to meet entrance requirements at most medical
schools. However, the Co-Op Program may be requested regardless of the E.E. curriculum selected. It is a five-year program with the fourth year consisting of full-time engineering work at a local industry. The year of practical experience has both educational and monetary benefits for the students. The Department attempts to place each interested student but cannot guarantee the availability of a co-op position in advance.

</table>

The above comprises what is termed the general option curriculum, for which a minimum of 134 approved semester hours is required, including required courses in physical education. Two other options are offered, with changes from the general option curriculum as follows:

**Computer Engineering Option**

Requires a minimum of 135 approved semester hours, including required courses in Physical Education. The changes from the curriculum above are:

A. Sophomore year, 2nd semester: Humanities and Social Studies course replaced by Math 124.

B. Junior year, 1st semester: M.E. 115 replaced by E.E. 236.
C. Junior year, 2nd semester: E.E. 111 replaced by E.E. 237.
D. Senior year, 1st semester: Elective replaced by Math 237; E.E. 113 replaced by CS 242, or equivalent with departmental approval. E.E. 187 is an additional required course.
E. Senior year, 2nd semester: E.E. 114 replaced by E.E. 111; elective replaced by a Humanities — Social Studies course; and, E.E. 146 replaced by Math 238.

Pre-Medical Option
Requires a minimum of 140 approved semester hours, including required courses in Physical Education. The changes from the curriculum above are:
Free electives in the senior year and three courses selected with departmental approval among E.E. 174, 162, 163, 113, 114 and M.E. 115 are replaced by Chemistry 131, 132, 140 and Biology 1, 2.

MECHANICAL ENGINEERING
The curriculum in Mechanical Engineering, leading to a degree of Bachelor of Science in Mechanical Engineering, offers instruction in structural engineering, power systems, control systems, fluid mechanics, materials, machine design, and manufacturing processes, as well as in the engineering sciences, natural sciences, humanities and the human and social sciences including the non-technical aspects of engineering such as law, safety, and economics.
Each student, with the approval of his advisor, must in the junior year elect to take either the energy option or the design and materials option. Each option will culminate in a senior laboratory project where he or she will synthesize a comprehensive project relating to societal needs.

2To be selected from departments of engineering, mathematics, business administration or physical sciences.

A minimum of 125 approved semester hours is required for the degree in this curriculum including required courses in physical education.

A student who, at the end of his Junior Year, has a cumulative average of 3.0 or above may become an applicant for the honors program in a special area of study. If accepted the student will determine his own program under the guidance of his advisor.

**BACHELOR OF SCIENCE IN ENGINEERING**

In addition to the accredited, professional curricula outlined above, the College also offers a more flexible program leading to the degree of Bachelor of Science in Engineering. This curriculum is intended for students who desire a strong engineering science base combined with specialization in an interdisciplinary engineering area. Specializations available under this program include bio-engineering, computer technology, environmental technology, energy conversion and resources, geological engineering, and transportation engineering.

All candidates for the Bachelor of Science in Engineering degree must complete the engineering core curriculum of 30 credits (page 95) and the following group of engineering science courses, totaling 18 credit hours:

- Engineering Science 110 — Thermodynamics and heat transfer
- Engineering Science 121 — Fluid mechanics
- Engineering Science 122 — Heat and mass transfer
- Engineering Science 131 — Materials I
- Engineering Science 141 — Systems control

Each student will be expected to select an area of specialization before applying for admission to the upper division. At that time, the student and his advisor will plan an integrated series of courses directed toward the concentration
selected. In addition to the engineering core and the engineering science requirement noted above, candidates for the Bachelor of Science in Engineering degree must present a total of at least 124 semester hours of credit, including required courses in physical education, and must fulfill the following requirements:

Physics 25, Mathematics 121 — 8 credit hours  
Humanities and social studies — 18 credit hours  
Technical electives\(^1\) — 30 credit hours  
Free electives — 18 credit hours

**HUMANITIES AND SOCIAL STUDIES**

- Language
- Literature
- Fine Arts
- Philosophy
- Social Sciences

**TECHNICAL ELECTIVES**

- Business Administration
- Chemistry
- Engineering
- Geology
- Life Sciences
- Mathematics
- Physics
- Technology Courses

Any substitutions in the engineering core program require the approval of the College Studies Committee.

\(^1\)A minimum of 7 courses in Technical Electives must be chosen from courses at the 100 level or above. A minimum of 18 credits of Technical Electives must be engineering courses.

**Applied Science**

The College of Engineering, Mathematics, and Business Administration offers several programs in the physical sciences and related areas. These curricula are intended to prepare students for professional work or graduate study in the field.

**CHEMISTRY**

A minimum of 122 approved credit hours are required for the B.S. degree in chemistry, including required courses in physical education. The student's program must include the following courses: Chemistry 11, 12 (or 1, 2 and 123), 131, 132, 134, 135, 141, 142, 184, 201, 202, 212, 213, at least 9 semester hours of advanced chemistry electives, which may include 197, 198; Physics 15, 16 or 24, 25; Math 21, 22, 121 (or equivalent), Math 271; proficiency in German equivalent to German 15, 16. In addition the student must take sufficient courses outside the natural sciences to satisfy the distribution requirements outlined by the College of Arts and Sciences (see page 59).

A typical program for those wishing to obtain the B.S. degree in Chemistry is as follows:

<table>

### GEOLOGY

A minimum of 126 approved credit hours are required for the B.S. degree in geology, including required courses in physical education.

Students who elect this curriculum are encouraged to combine geology with one or more related disciplines in order to develop strong professional backgrounds. Examples of such interdisciplinary fields include geochemistry, oceanography, geological engineering, geomathematics, environmental studies, and geobiology.

1. English I or English 50, History of Science, Philosophy of Science, Anthropology, Economics, German, French or Spanish are recommended.
2. Students concentrating in geophysics must take Physics 24, 25, 128 and mathematics through differential equations, and additional courses in physics. CE 1 and 2 may be substituted for physics for those specializing in Geological Engineering.
3. 100 level or higher.
4. Courses in science, mathematics or engineering selected so as to develop a minor area of concentration.

### Physics

A minimum of 122 semester hours are required for the B.S. degree in physics, including required courses in physical education.

</table>

1. English I, Written Expression, is recommended for students needing or wanting to improve their writing skill.
2. Other science courses may be substituted with departmental approval.
3. The undergraduate major is required to take at least two advanced courses in mathematics beyond the sophomore year. In addition the student is required to become competent in computer programming.
BACHELOR OF SCIENCE (Undesignated)

The College of Engineering, Mathematics, and Business Administration also offers a general Bachelor of Science degree. This degree is intended for students who wish to follow a curriculum with a strong applied science orientation but with greater flexibility than is permitted by the designated degree programs outlined above. The undesignated B.S. program also permits specialization in one of several interdisciplinary areas of applied science. Specializations available include applied chemistry, applied physics, environmental science, and materials science.

All candidates for the undesignated Bachelor of Science degree must complete the basic quantitative course sequence, Math 21, 22, 121 and CS 11 (15 credits), and the following group of engineering science courses (18 credits):

- Engineering Science 110 — Thermodynamics and heat transfer
- Engineering Science 121 — Fluid mechanics
- Engineering Science 122 — Heat and mass transfer
- Engineering Science 131 — Materials, I
- Engineering Science 141 — Systems control

Each student will plan, with his advisor, an integrated sequence of courses to meet the student’s educational objective. This plan must be approved prior to the student’s admission to the upper division.

Candidates for the undesignated B.S. degree must present a total of 122 approved credit hours, including required courses in physical education. In addition to the specific courses stated above, they must also complete the following requirements:

<table>
<thead>

TECHNICAL ELECTIVES

- Business Administration
- Chemistry
- Engineering
- Geology

- Life Sciences
- Mathematics
- Physics
- Technology Courses

¹ At least 6 credits of the 24 required in the Humanities and Social Studies must be at the 100 level or above.
² At least 12 credits of the 45 credits required in technical and free electives must be at the 100 level or above.

Mathematical Sciences

The College of Engineering, Mathematics, and Business Administration offers programs in several areas of the mathematical sciences and their applications. Curricula leading to the Bachelor of Science degree are available in Mathematics, Computer Science, and Statistics.

CORE CURRICULUM FOR MATHEMATICAL SCIENCES

Mathematics 21, 22, 121, 124.
Computer Science 11.
MATHEMATICS

The curriculum in mathematics is designed to provide sound basic training in mathematics, to prepare the student for a position in an area in which persons with mathematical skills and insights are sought, and to qualify students for advanced study in graduate school. Students in the College of Arts and Sciences may concentrate in mathematics and receive the Bachelor of Arts degree. An advisor from the department will assist students in the determination of programs best suited to their individual needs and plans.

In addition to the core curriculum (above), candidates for the B.S. degree in mathematics must complete the following requirements:

1. Thirty additional hours in Mathematics, Statistics or Computer Science courses numbered 100 or above. Of these 30 hours, at least 21 hours must be numbered 200 or above and no more than 12 hours may be chosen from Computer Science.

2. At least 24 hours in the allied fields of
   (a) Physical Sciences     (e) Agricultural Sciences
   (b) Biological Sciences  (f) Business Administration
   (c) Medical Sciences     (g) Psychology
   (d) Engineering          (h) Economics
   Of these, at least 6 hours must be in courses numbered 100 or above and at least 6 hours must be taken in the fields (a)-(d).

3. Humanities and Social Studies — at least 24 hours chosen from categories A, B, C on page 92. These must be distributed over at least two categories, and at least 6 hours must be taken in each of the two categories chosen.
   Note: Courses used to satisfy the requirements in 3 may not be used to satisfy requirements in 2, and vice versa.

4. A minimum of 122 semester hours, including required physical education courses.

Several concentrations are available within the mathematics curriculum. These are not separate degrees, but rather indicate an emphasis chosen by the student and are directed toward certain career objectives. A complete list of recommended courses for each concentration may be obtained from the Department of Mathematics, and advisors for each option assist students in the determination of their programs.

(1) **General** — This option is intended for those students who choose to major in mathematics and whose career goals have not yet been determined. Those electing this option will be expected to attain proficiency in several branches of mathematics.

(2) **Pre-Graduate Training** — This option is designed for students who elect mathematics not only as an undergraduate major, but also as a future profession. The program of study will prepare students for advanced courses at the graduate level.
   Recommended Mathematical Sciences Courses include MATH 102, 207, 230, 240, 241, 242, 251, 252.

(3) **Secondary Education** — This option provides mathematical training for students seeking careers as teachers in secondary schools.
   Recommended Mathematical Sciences Courses include MATH 4, 104, 251, 252, 255, 257, 260, 261, 263, STAT 151, 211. The student should
consult the College of Education concerning non-mathematical courses needed for certification.

(4) **Pre-Medical** — The science requirements for the Bachelor of Science degree are particularly suited for a pre-medical student who has an interest in mathematics and who desires a more flexible curriculum than is possible elsewhere in the college.

Advanced Mathematical Sciences Courses should be chosen in consultation with departmental advisors.

(5) **Pre-Law** — Mathematics can be an appropriate major for a student who intends to enter law school. Pre-law training should emphasize the development of (a) language facility, (b) understanding of human values, (c) creative thinking. A broad course of study is needed for this development and the flexibility in the B.S. degree program in Mathematics provides the opportunity for such study.

Recommended Mathematical Sciences Courses include MATH 102, 207, 219, 220, STAT 211.

**APPLIED MATHEMATICS**

The purpose of the curriculum in applied mathematics is to combine mathematical techniques with applications in order to equip the student to treat a variety of physical problems. Emphasis is on the mathematics involved in the solutions of problems and on developing methods for addressing a large spectrum of "real world" problems.

Several options are also available under this curriculum:

(1) **Mathematics of Computation** — This option emphasizes problem solving via computers. The program of study should expose the student to several areas in which the mathematics of computation has significant applications. Recommended Mathematical Sciences Courses include MATH 104, 207, 218, 230, 237, 238, 240, 274, STAT 211, 221, COMP SCI 12, 241.

(2) **Industrial Mathematics** — This option stresses applied mathematics and its use in the scientific method of decision making. Included in this program are such areas as operations research and modeling and their applications to education, government and industry.

Recommended Mathematical Sciences Courses include MATH 207, 221, 222, 230, 235, 236, 237, 238, 240, 241, 264, 274, 276.

(3) **Military Mathematics** — Students who enter the ROTC program may wish to incorporate in their mathematics major certain courses especially valuable in the military.

Recommended Mathematical Sciences Courses include MATH 221, 222, 230, 245, 261, 276, STAT 151.

(4) **Operations Research** — This option is being developed. Additional information may be obtained from departmental advisors.

**COMPUTER SCIENCE**

Computer Science is one of the mathematical sciences although there are strong ties to electrical engineering. It is the study of the theoretical basis, design and application of electronic computing machines.

The program in Computer Science is a new administrative unit at the University. A student interested in majoring in computer science will have a faculty member from the Computer Science Program assigned as advisor. The program offers the B.S. and M.S. degrees in Computer Science.

The Computer Science curriculum provides a broad basic training in Computer Science with required courses in the theory of computing, hardware design and software techniques. A minor specialization in an allied field is required so that the student develops an appreciation for the applicability of his knowledge of computer science.

Requirements for the degree of Bachelor of Science in Computer Science are, in addition to the mathematical sciences core (page 104):

*Computer Science:* CS 12, 101, 102, 103, 104, 201, 222, 241, 242

*Other Mathematical Science:* Math 104, 124; Stat 151

*Electrical Engineering:* EE 230

*Other:* English 1, Communications and Theatre 11, one full year of physics or electrical engineering. The courses selected in physics or EE can not be used as part of the minor requirement.

**Minor Field:** Six semester courses for a minimum of 18 credits in an allied area. Suggested areas are: Business Administration, Social Science, Physical Science, Biological Science or Engineering. Students who wish to minor in Mathematics or Statistics may do so and are required to take only 4 courses numbered 200 or above in the area of their choice.

In order to assure that the courses chosen to constitute the minor specialization form a cohesive unit, all minor programs must be approved by the Computer Science studies committee.

**Distribution Requirements:** A student must complete at least 2 semester courses for a minimum of 6 credits in each of the two areas:

A. Social Science to include:
- Anthropology
- Economics
- Geography
- History

B. Humanities, Fine Arts and Philosophy to include:
- Language
- Literature
- Art
- Drama
- Music
- Speech
- Psychology
- Sociology
- Religion

Courses used to fill the other requirements may not be used to fill the distribution requirement.

A typical program in Computer Science is as follows:

<table>

</table>
STATISTICS

Statistics is a mathematical science extensively used in a wide variety of fields. Indeed, every discipline which gathers and uses data has developed a need for statistical procedures to understand and use the information implicit in their data base. Statisticians become involved in efforts to solve real world problems by developing and investigating stochastic models, designing experimental plans, constructing and interpreting descriptive statistics, and developing and applying statistical inference procedures. Statisticians need a knowledge of mathematics and computer programming to develop new techniques and investigate their properties as well as to carry out the calculations required in the process of summarizing and analyzing data.

The Statistics program is an independent unit within the College of Engineering, Mathematics and Business Administration with the responsibility of offering to the entire University community appropriate probability and statistics courses as well as degree programs in statistics. The Program staff consists of faculty with extensive training and continuing professional interest in statistics and holding appointments in a number of different departments (Mathematics, Business Administration, Economics, Psychology, Forestry, Physiology, and Epidemiology and Environmental Health).

The newly proposed B.S. in Statistics program is currently under consideration by the University. The curriculum would provide a basic training in probability, statistical theory and applied statistics. During the junior year the student and his/her advisor will formulate the detailed program of advanced courses appropriate for the student's career objectives. Program options are available for three different career goals: 1) employment as a bachelor level statistician in business, industry, or government; 2) graduate level training in statistics, biostatistics, operations research, or some closely allied field; and 3) graduate level training in another field which makes extensive use of probability and statistics such as psychology, business and economics, agricultural science, and the medical sciences. Appropriate courses for the student's intended career goals are selected under the professional electives section of the curriculum.

Students interested in majoring in statistics should contact the Statistics Program Director for details on curriculum requirements. Required courses for the first two years are essentially identical to that for a mathematics major. Additionally Statistics 51 and 141 are recommended.

Cooperative Programs

The College of Engineering, Mathematics, and Business Administration offers cooperative work-study programs for majors in several departments within the College. These cooperative programs differ from those offered at
many other institutions in that they do not begin until the junior year has been completed. Furthermore, all such arrangements are considered to be honors programs, with selection determined by the department concerned and enrollment limited to available opportunities in industries, companies and state and federal agencies.

The cooperative program attempts to provide a year of practical work experience related to a student’s major field, to give students a chance to earn toward senior year college expenses, and to make the placement of a student after graduation somewhat easier by having had a year of work experience. No academic credit will be given for the work experience but an entry will be made upon the official transcript indicating the student had been a cooperative student, and the dates of employment and the name of the employer.

The calendar for work experience has two options:

1. Normally, the full year of work occurs between the end of the junior year and the beginning of the senior year.

2. Some federal agencies require two work experiences separated by a semester of college work. In this case, the first work experience occurs during the summer after the junior year, followed by the first semester of senior year at the University of Vermont. The second work experience of either a full year or a half year is followed by the last semester of college work.
The Division of Health Sciences

The Division of Health Sciences, authorized by the Board of Trustees, became effective July 1, 1968, bringing together several related programs in this important field. It includes the College of Medicine, the School of Allied Health Sciences, and the School of Nursing.

The Division reserves the right to require the withdrawal of any student from any curricula whose health, academic record or performance and behavior in the professional careers is judged unsatisfactory.

The College of Medicine

REQUIREMENTS FOR ADMISSION

Applicants to The University of Vermont College of Medicine are expected to complete the required courses of study by July 1 preceding the September admission date — in a college or university accredited by the National Committee of Regional Accrediting Agencies of the United States.

Required are one year each of the following college level courses:
- Biology
- Physics (including laboratory)
- General or inorganic chemistry
- Organic chemistry

In addition, because a physician requires a broad and balanced cultural background as well as a technical education, the College recommends as appropriate to an adequate premedical program:
- English — at least one and preferably two years of composition and or literature.
- Mathematics — dependent upon secondary school preparation but should include at least an introduction to calculus.
- Behavioral Sciences — one or two years in the areas of psychology, sociology or anthropology.
- The Humanities — at least two years of course work in history, philosophy, religion or the arts.

The College of Medicine encourages its prospective students to concentrate while in college in a field of knowledge of their choice, whether in the sciences or humanities, and to pursue these interests in depth. It seeks students with diverse collegiate and extra-collegiate backgrounds, but insists that their pattern of performance has demonstrated intellectual drive, independent thinking, curiosity and discipline.

Since communication, written and verbal, is so essential in scientific and clinical medicine, the faculty of the College of Medicine fully expects applicants to have mastered basic skills in the use of the English language, i.e., proficiency in grammar, spelling, organization, etc.
Eligibility of an applicant for admission is determined by the Committee on Admissions of the College of Medicine on the basis of the following criteria:

A. The prior scholastic record of the applicant.
B. Aptitude for the study and practice of medicine as determined from the applicant’s autobiographical statements, letters of evaluation and by personal interview with members of the Committee.
C. Behavioral qualities deemed essential for a career in medicine. These include, but are not limited to, judgment, personal insight and perception, personal integrity, personal accountability, responsibility and sensitivity.
D. The applicant’s scores on the Medical College Admissions Test.

The Committee strives to select as students those applicants who will benefit most from the College’s specific educational program. Within the selection process, the needs of society are considered in addition to those of the individual applicant.

Preference for admission is according to the following priorities:

A. Residents of Vermont.
B. Residents of other states having contractual arrangements with the College of Medicine.
C. Residents of all other states.
D. In order to further the interest of the State of Vermont in retaining physicians to practice medicine and deliver health care to its citizens, preference will be given in “A” above to those applicants having the greater duration of residency within the State.
E. Sons and daughters of alumni of the College of Medicine will be given special consideration within the framework of the above policy.

The final closure date for receiving applicants is November 1 preceding the September admission.

An application fee of $20.00 (not refundable) is payable on request of the Office of Admissions.

THE CURRICULUM

The curriculum consists of three parts: the basic science core, the clinical core, and the senior major program.

Basic Science Core

The forty-eight weeks of instruction in the Basic Science Core spans the first year and fall semester of the second year. During this period students are instructed in the basic sciences that undergird clinical medicine. Emphasis is placed on that body of knowledge common to all types of medical practice, avoiding the minute details relevant only to individual specialties. Seminars in Human Behavior and the Basic Clerkship provide for the first year medical student clinical contacts, an awareness of social, cultural and psychologic factors affecting health and illness, and insight into the major issues influencing the practice of medicine.
Clinical Science Core

The Clinical Core extends from January of the second year until December of the third year. During this twelve-month period each student receives twelve weeks of instruction in medicine, twelve weeks of instruction in surgery, eight weeks in pediatrics, eight weeks in obstetrics and gynecology, and eight weeks in psychiatry. There will be a brief summer vacation. During this year the student works under the supervision of a physician within the wards and clinics of the Medical Center Hospital in providing primary care to patients.

Senior Major Program

The final portion of the curriculum, the Senior Major Program, extends through the final one and one-half years prior to graduation. This period is divided into sixteen rotations of one month duration. The major program enables each student to select that course of study best suited to his career objectives. Majors are offered in each of the preclinical sciences, plus medicine, family practice, surgery and its subspecialties, obstetrics — gynecology, pediatrics, neurology, psychiatry, and rehabilitation medicine.

An integral part of each clinical major includes a number of required clinical and laboratory experiences as well as elective rotations. These elective rotations are not restricted to the disciplines in which the student is majoring and may include approved learning experiences away from Burlington. Many students see this as an opportunity to work and study in a large urban setting, at another medical school or a foreign medical center. Students should anticipate spending variable periods of time away from Burlington in the course of pursuing their required training. A system of faculty advisors has been developed to counsel each student on a one-to-one basis throughout the planning and course of this major program and in anticipation of later graduate education. Although the majority of students elect to pursue a clinical major, students so desiring may commit their entire major program to study in one of the preclinical sciences. While these programs are individualized, it is expected that graduate study and research will form the basis for each. Qualified students may simultaneously enroll in the Graduate College of the University as candidates for the Master of Science degree while fulfilling the requirements for the M.D. degree within the College of Medicine.

The School of Allied Health Sciences

Dental Hygiene  Associate in Science
Medical Technology  Bachelor of Science
Medical Laboratory Technology  Associate in Science
Physical Therapy  Bachelor of Science
Radiologic Technology  Associate in Science

The School of Allied Health Sciences offers a variety of programs in response to the social and health care needs of our community. It encourages interaction among its students and faculty for closer participation in meeting this need. All programs offer clinical education experiences in a variety of appropriately approved hospitals and health facilities in Vermont and the eastern part of the country. The academic programs are accredited by the responsible professional agencies.

THE PROGRAM IN DENTAL HYGIENE

The Department of Dental Hygiene offers a two-year curriculum leading to an Associate in Science degree and a Certificate in Dental Hygiene.
The program is accredited by the Council on Dental Education of the American Dental Association. Graduates are eligible to write the National Board Examination in Dental Hygiene and meet requirements for licensure determined by individual states.

The duties of a graduate dental hygienist are educational and preventive in nature and may be carried out in private dental practice, public institutions, hospitals and industrial clinics, and public health programs. Dental hygienists practice under the supervision of a dentist. The primary concentration of her skills is in oral health education, oral prophylaxis and inspection. However, she is qualified to perform procedures for the prevention of dental caries, expose and process dental radiographs, and assist in other phases of dental practice. The dental hygienist is a vital member of the health science professions, and her opportunities are practically unlimited.

Requirements for admission to study in the Dental Hygiene Program are identical with general University requirements, with the additional requirement that applicants write the Dental Hygiene Aptitude Test. Information and application forms for this test are available from the American Dental Hygienist's Association, 211 East Chicago Ave., Chicago, Ill. 60611. Applicants are encouraged to have a personal interview, preferably after their application is completed.

As this program of study is scientifically orientated, high school courses in algebra, chemistry, biology and physics are important prerequisites. Personal attributes essential to success in this program include good health, emotional stability, task orientation, high moral standards and an ability to relate well with society.

The courses of study are designed to give the student a well rounded foundation in basic sciences, specific knowledge in dental sciences and an understanding of the humanities. Clinical experience is obtained in the department's dental hygiene clinic where patients of all ages and with varieties of problems receive service, and in community oral health care situations. Dental hygiene students also have an opportunity to increase their communication skills through oral health education presentations in schools in the area.

Students applying for this program should be interested in and have aptitude for scientific studies.

### Required Courses

- **Dental Hygiene 1-2**
- **Physical Education**
- **Psychology I**
- **Nutrition H 46**
- **Radiology 61**
- **Oral Pathology 53-54**
- **Periodontology 55**
- **Pharmacology and Anesthesiology 52**
- **Anthropology 21**
- **Dental Materials 91**
- **Dental Practice 62**
- **Elective**
A minimum of 68 approved semester hours and a grade point average of 2.0 is required for the Associate Degree in this curriculum. A grade of "C" or better is required for all professional courses.

THE PROGRAM IN MEDICAL TECHNOLOGY

The Department of Medical Technology offers an integrated Associate Degree Medical Laboratory Technician (MLT) and a Baccalaureate Degree Medical Technology curriculum. After completion of the Associate Degree program, the graduate may be eligible for certification by the Board of Registry of the American Society of Clinical Pathologists as MLT (ASCP) and shall have obtained an employable skill. The Baccalaureate Degree Program is designed to extend the knowledge and judgment acquired at the level of the Associate Degree to prepare individuals to assume a leadership role in the practice of her/his profession; students are admitted into one of the following curriculum options: Hematology, Clinical Chemistry, Clinical Microbiology or Generalist.

The minimum requirements for the first two years are as follows:

<table>
<thead>
<tr>
<th></th>
<th>1st Semester</th>
<th>2nd Semester</th>

</tbody>
</table>

*Each course offered each semester. Students will be assigned to these courses on a rotating basis.

A minimum of 61 approved semester hours including University requirements for Physical Education are required for graduation. A minimum grade point average of 2.0 in the professional courses (MEDT 20, 21, 22, 23) is necessary for recommendation to the certifying agency for examination. Requirement details available from advisor.

Due to limitations imposed by physical facilities, the number of students admitted to the final two years of the Baccalaureate Degree program will be limited. Students desiring to be admitted to the final two years should make application to the Department of Medical Technology in the spring of the second year. The deadline date for application will be announced early in the second semester. It will be necessary for each applicant to show evidence of technical proficiency, good academic achievement, and adherence to high standards of professionalism.
A Selection Committee will review each applicant and make recommendations to the Chairman of the Department. Personal interviews may be requested. The Department Chairman will make the final decision and notify the applicants by April 1.

All students accepted for the additional two years leading to the Baccalaureate Degree, regardless of their specialty area, will enroll in the following:

- Biochemistry 211-212 8
- Physics 11-12, (15-16) 8
- Pathology 101 3
- Allied Health 199 3
- Instrumentation Laboratory 204 2
- Medical Technology 191 3

The remainder of the curriculum is designed to provide advance instruction in theory and practice within the specialty area.

A minimum of 128 approved semester hours and a grade point average of 2.0 are required for the Bachelor of Science Degree.

THE PROGRAM IN PHYSICAL THERAPY

The Department of Physical Therapy offers a four-year curriculum leading to a Bachelor of Science degree. In the freshman and sophomore years, students will concentrate on the necessary prerequisite courses. These prerequisites are in the humanities, sciences, and social studies. In the sophomore year, the student will begin the basic sciences of anatomy and physiology and introductory courses in Physical Therapy. The junior and senior years are devoted to the professional program with time to further explore the humanities and social sciences required for a liberal education. During the professional program, clinical education experiences will provide the student with concurrent opportunities to apply the acquired knowledge and skills. The program of study is:

*(Optional/Advisor)*

PT 128 Clinical Education I — 6 week period, full-time; May-June or later/3 Cr.
PT 158 Clinical Education II — 12 weeks full-time; Jan. thru Mar.

Second Semester Senior Year

A minimum grade point average of 2.0 is required for the Baccalaureate Degree in this curriculum.

The full-time Clinical Education Program (PT 128, PT 158) is an integral part of the curriculum offering the student opportunities to apply academic knowledge in the clinical setting. The program is widely affiliated throughout the North Eastern United States. Students affiliating will be responsible for the cost of transportation and living expenses (including room and board) during the 6 week periods of the Junior summer and the 12 week period of the Senior Spring semester. Students should plan their finances to include these expenses.

The affiliations will be scheduled as indicated unless inconvenient for the clinical facilities. Students may be required to affiliate during an alternate time period if sufficient clinical facilities are not available.

THE PROGRAMS IN RADIOLOGIC TECHNOLOGY

The Department of Radiologic Technology offers three twenty-four month programs leading to the Associate in Science Degree.

1) The Radiographic (X-Ray) Technology Program prepares persons for a career in operating x-ray equipment to obtain diagnostic information on patients.

2) The Nuclear Medicine Technology Program prepares persons for a career in working with radioactive drugs and complex equipment for diagnosing patient problems.

3) The Radiation Therapy Technology Program prepares persons for a career in operating high energy radiation machines for treating cancer patients.

All three programs are accredited by the American Medical Association and graduates are eligible to write the examination of the American Registry of Radiologic Technologists. New England residents may enroll at in-state tuition rates because of the Regional Student Program of the New England Board of Higher Education.

During the semester, students obtain direct experience with patients at the Medical Center Hospital of Vermont (MCHV). Summertime clinical experiences are obtained at the MCHV and other hospitals throughout the region. The summer clinical experiences will require additional room and meal expenses.
A B.S. Degree Program is available through the College of Education for a limited number of persons to prepare for a career of teaching in one of the radiologic technology specialties. Registered technologists from hospital-based programs are encouraged to apply. Equivalency examinations are available in all Radiologic Technology courses and will be administered after a person matriculates. Interested persons should write directly to the Department in the Rowell Building for additional information and an interview.

Jones, Karl, R.T.; Putnam Memorial Hospital, Bennington, VT
Kibbee, Gary, R.T.; North Country Hospital, Newport, VT
Lacasse, Iris, R.T.; Medical Center Hospital of Vermont, Burlington, VT

The School of Nursing

Nursing — AS Degree (2 years)  
Nursing — BS Degree (4 years)  

The School of Nursing offers two distinct educational programs to prepare qualified individuals for the practice of nursing. The Professional Nursing program is four years in length and leads to the Bachelor of Science degree. The Technical Nursing program is two years in length and leads to the Associate in Science degree. Both programs are approved by the Vermont State Board of Nursing and accredited by the National League for Nursing, Inc.

Transfer between the two programs is possible in accord with University policy and with consent of the departments concerned.

Applicants must satisfy the general admission requirements for the University. High School courses in biology, chemistry and physics are highly recommended.
A minimum 2.0 grade-point average is required for graduation. Grades in nursing courses are based on achievement in theory and in laboratory practice, both of which must be satisfactory to receive a passing grade. Refer to departmental sections for specific policies. The School of Nursing reserves the right to require the withdrawal from nursing of any student whose health, academic record, or performance and behavior in nursing is judged unsatisfactory.

All students in the School of Nursing are responsible for transportation to and from the agencies which are used for clinical experiences. These include the Medical Center Hospital of Vermont; the Burlington Visiting Nurses’ Association, Inc.; and other selected agencies.

Financial aid is available in the form of scholarships, loans, prizes, and employment (see section on Financial Aid). Of special interest to students in nursing is the Nursing Student Loan Program. Anyone interested should make application for financial aid by February 1.

PROFESSIONAL NURSING PROGRAM

The Department of Professional Nursing offers a curriculum leading to the Bachelor of Science degree. This curriculum is designed to provide the opportunity for qualified individuals to prepare for professional practice in beginning positions in various settings, to acquire a foundation for continued formal study in nursing, and to enhance growth toward maturity as individuals, professional persons, and citizens. The graduates of this program are eligible for licensure as registered nurses, and may advance without further formal education to positions which require beginning administrative skills.

The curriculum, conducted in four academic years, provides an approximate balance in general and professional education. Courses in the sciences — biological, physical and social — serve as a foundation for the professional nursing courses.

A minimum of 127 approved semester hours is required for the Bachelor of Science degree. Effective with the class of 1980 a grade of “C” or better is required in Chem. 4, Zool 5-6, MCBI 55, Nursing 125-126, Nursing 145, 146 and 152.

A typical program of studies follows:

</table>
In addition to the general educational courses found in the curriculum outlined above, specific courses in general education are required and additional courses are elected in accordance with individual need and interest and in consultation with the faculty advisor. These are:

- **Social Sciences** — 15 credits
  - Including Psychology I and Sociology 10, 101, 165 or acceptable substitute.
- **Humanities and Languages** — 15 credits
  - Including English — 6 credits
  - Philosophy or Religion — 3 credits
  - Communication and Theatre 11 — 3 credits
- **General Electives** — 15 credits

Students are encouraged to study a foreign language, mathematics, or other discipline of their choice.

**TECHNICAL NURSING PROGRAM**

The Department of Technical Nursing offers a curriculum leading to the Associate in Science Degree. The curriculum is designed to prepare qualified individuals to give direct nursing care to patients of all age groups and to promote development of the individual as a responsible member of society. The graduates of this program are eligible for licensure as registered nurses and are prepared for nursing practice in hospitals, clinics, nursing homes and other health agencies.

The curriculum is two academic years and one four-week summer session in length. General education courses account for approximately one-half of the total required credits and nursing courses for the remaining one-half. Nursing courses are taught concurrently with general education courses throughout the two years and include classroom instruction and guided clinical experiences in selected agencies.

A minimum of 67 approved semester hours is required for the Associate in Science degree. A grade of "C" or better must be achieved in each clinical nursing course in order to continue in the nursing sequence.

*English, Philosophy, History or Religion.
**Physical Education — 1 credit during the 2 years.
ADVANCED STANDING

The School of Nursing provides an opportunity for individuals who have had prior experience in the health field to receive advanced standing in the program to which admission is sought. Admission to the program is essentially the same as for other applicants to the University. In accord with University policy, the student may apply for credit by examination in general education and selected nursing courses.

Individuals planning to seek admission with advanced standing are urged to write to the School of Nursing for more detailed information and to arrange for a personal interview prior to applying for admission or taking courses for college credit at this or another institution.

CONTINUING EDUCATION

The School of Nursing offers continuing education programs to meet the needs of registered nurses. The School cooperates with health related agencies and institutions in sponsoring other programs.

The School of Home Economics concerns itself with man's physical, social, and psychological relationship to his environment and offers five programs, each leading to a bachelor of science degree. Concentrations within programs offer a variety of backgrounds for professional careers. All programs require 120 semester hours of course work including;

General requirements

Behavioral and social sciences 6 credits
Communication skills 6 credits
Humanities 6 credits
Physical and biological sciences 6 credits
Home Economics
Integrated courses 9 credits
Physical Education
Physical education activities 2 credits
Professional concentration requirements and electives 82 credits
PROGRAMS OF STUDY

Clothing, Textiles, and Design

**CONCENTRATIONS:** Clothing, Textiles, and Textile Design.

Prepares students for careers in merchandising, consumer research and counseling, fashion and textile designing, and promotional work in industry and the Extension Service. Professional requirements include courses in Clothing, Textiles and Design, Humanities, Social Sciences and Chemistry.

Early Childhood and Human Development

**CONCENTRATIONS:** Early Childhood Development, Human Development, and Human Development Education (offered jointly with the Home Economics Education Program).

The concentration in Early Childhood Development provides the student with academic and work experiences focusing on the developmental needs of young children. It is closely aligned with the concentration in human development and cooperates with Elementary Education. Students prepare to work in public and private meetings for young children and their families. Students are encouraged to participate in community programs. A year of study at the Merrill-Palmer Institute in Detroit, Michigan, may be arranged.

In human development the approach is interdisciplinary and ontogenetic, close ties being maintained with other programs in the school and other departments in the University. A year of resident study at the Merrill-Palmer Institute in Detroit, Michigan, may be arranged. The student may prepare for work in agencies dealing with children and families, the public schools, and graduate studies.

The concentration in Human Development Education is designed to provide the student with a broad background, the necessary experience in professional education, and a full complement of preparation in the disciplines of home economics that focus on the developing individual. Students completing this concentration will be eligible for certification to teach home economics with particular competencies in the areas of human development, child care, and family living and sex education.

Home Economics Education and Consumer Economics

**CONCENTRATIONS:** Consumer and Homemaking Education or Middle School Living Arts, Extension Education, and Human Development Education (offered jointly with the Early Childhood and Human Development Program as described above), and Consumer Economics.

Prepares for a variety of teaching opportunities including high school Consumer and Homemaking programs, the newly developing areas of middle and elementary education in Living Arts, Adult Teaching, Occupational Home Economics, and positions in the Extension Service. All students who plan to specialize in any phase of education must make application to Teacher Education and must have a 2.5 average in their home economics subjects to be eligible for student teaching during their senior year. (See Teacher Education at UVM.)

Consumer Economics careers may be found in consumer education, research and mass media.

Housing and Residential Environment

**CONCENTRATIONS:** Housing.

Careers include work with utility companies or appliance dealers and a wide variety of opportunities in planning and management of housing and interiors. Students may prepare to work as consultants for urban renewal relocation, city
planning, architectural and building firms. Promotional work may be found with consumer education and research, newspapers and magazines, radio and TV. Emphasis may be directed toward one of the following professional goals: Housing and Equipment, Housing and External Environment, Housing and Interior Design. Professional requirements may be chosen from the Humanities, Social Sciences and Physical Sciences.

Human Nutrition and Foods

CONCENTRATIONS: Dietetics, Foods, Hospitality Industry, Human Nutrition, and Nutrition Education.

Students may develop a strong background for professional careers, graduate study or college teaching by selecting a concentration in dietetics, foods, hospitality, human nutrition, or nutrition education. The concentration in dietetics is designed to meet academic requirements for membership in the American Dietetics Association.
Academic programs of the School of Natural Resources provide the philosophical and scientific basis for addressing the critical issues facing society in the allocation, management, and utilization of renewable natural resources. These programs require a foundation in the humanities and social sciences; the physical and biological sciences; and the quantitative areas of mathematics and statistics. The technical and applied education of the natural resource programs builds from the knowledge base to prepare individuals for professional careers in forestry, wildlife biology, recreation management, resource economics, and environmental studies all leading to a Bachelor of Science Degree.

The School emphasizes scholastic excellence and the development of professional responsibility in its students. The faculty is conscientious in its role as academic advisors and encourages students to utilize them to meet their educational and professional goals.

**FORESTRY**

The program in Forestry provides a liberal education in the humanities and sciences and a professional education in forestry. The professional core emphasizes the science and technique of coordinating the management of forest and wildland for forest products, water, wildlife, and recreation. The program is designed to prepare individuals for positions in forestry or for graduate study in the forest sciences.

A minimum of 138 semester credit hours of prescribed and elective courses and a minimum cumulative grade point average of 2.0 is required for graduation.

1st Semester

2nd Semester

1 Students not qualified to enter Math 19 will take Math 10 during the first semester followed by Math 19 during the second semester.
2 Geology 1 (Introductory Geology) must be taken before the second semester of the sophomore year.
3 Two courses in forest protection (For. 107, For. 112 or For. 132) must be taken during the junior year.
4 Two courses in multiple use forestry (RM 135 and WLB 174) must be taken during the junior and senior years.
5 All students must complete the following requirements in the Arts, Social Sciences and Humanities.
   a. One course in Economics before For. 151
   b. One course in Political Science
   c. One course in either Psychology or Sociology
   d. One elective course from either Art, Classics, History, Music, Philosophy or Religion.
6 All students must complete the following requirements in English and Communications.
   a. One course in English
   b. Public Speaking (C & T 11)
   c. Two communications elective courses from an approved list.

WILDLIFE BIOLOGY

This program prepares individuals for professional careers requiring expertise in wildlife biology and ecology. All majors must complete a core of courses which meets the minimum recommendations of The Wildlife Society for Professional Training, and which satisfies education requirements of the U.S. Civil Service Commission as well as most state agencies for entrance grades in wildlife positions. Program flexibility allows each student, in consultation with an advisor, to expand the core with coursework appropriate to personal education and career goals. A minimum cumulative grade point average of 2.0 is required for graduation.

Course sequences can be developed in preparation for rather traditional positions in wildlife management, graduate study in wildlife science, or developing positions in wildlife resources (communications, conservation management and director posts, secondary or vocational education, information-education or interpretive naturalist, planning and programming, and outdoor recreation, for example). Completion of 133 semester hours of credit in core and elective courses is required for the Bachelor of Science Degree.

**Summer Camp**

Wildlife Biometrics (WLB 170) 4

Total Program Requirements, Semester Hours 133

---

1. Qualified students should substitute Calculus (MATH 19).

2. One lab course in each Chemistry and Physics, or two in Chemistry (selected from CHEM 1, 2, 3, 4, 16, 131; PHYSICS 3, 11, 15).

3. One course must be taken in each subdivision: (a) English Composition (ENGL 1, 50, or 53); (b) Speech (C&T 11); (c) Visual Methods (ART 2, 3, 161, or 162; or EDUC 142; or HEC 173; or VOTC 156).

4. Social Sciences: in addition to Economics and American Political Systems, three more hours must be taken in either Anthropology, Psychology, or Sociology. Humanities: courses must be taken in three of the five subdivisions (a) Art, Music, Theatre; (b) History (including history courses in other humanities); (c) Literature (including foreign language literature courses); (d) Philosophy; (e) Religion.

5. One course selected from the following (CE 163; GEOL 1, 25, 60; P&SS 61, 261).

6. Eighteen hours in Professional/Technical subjects selected with consent of program advisor.

7. A 2-semester sequence of BIOL 103 and ZOOL 104, or BIOL 103 and ZOOL 219, or ASCI 171 and ZOOL 219.
RECREATION MANAGEMENT

All majors in Recreation Management are required to successfully complete a series of core courses during the freshman and sophomore years. Upon completion of the sophomore year the student may elect to concentrate in one of two areas: Public Outdoor Recreation or Private Outdoor Recreation and Tourism.

These concentrations are designed to prepare students for professional careers in the management of outdoor recreation resources. The public recreation resources include parks, forests, and recreation areas at the local, regional, state, and federal governmental levels. Private resources include ski areas, campgrounds, hunting preserves, resorts, and other specialized recreation areas.

PUBLIC OUTDOOR RECREATION The Recreation Management Program’s concentration in public land management prepares the student for a professional career in the planning and management of natural resources for outdoor recreation use. It combines course work from the various natural resource disciplines with social sciences, communications, and public administration and management.
The Junior Year
Forest Recreation Planning, RM 135 3 —
Economics of Outdoor Recreation and Tourism, RM 225 3 —
Silviculture, For. 123 or Urban Forestry, For. 126 3 —
Resource Economics, RSEC 121 3 —
Elementary Statistics, Stat. 111 3 —
Park Design, RM 137, 138 3 —
Electives 6

The Senior Year
Park Protection, RM 140 3 —
Recreation Administration and Operations, RM 153 3 —
Park Interpretation, RM 155 3 —
Recreation Policy Formulation, RM 154 3 —
Participation in Recreation Management, RM 159 3 —
Water or Wildlife Management Elective 3 —
Recreation Buildings and Electricity Elective, VOTC 131 3 —
Senior Recreation Seminar, RM 182 2 —
Electives 4

Total Program Requirements, Semester Hours 127

PRIVATE OUTDOOR RECREATION AND TOURISM This program is designed to prepare students for professional management careers in a variety of private outdoor recreation enterprises and tourist-oriented business firms. Special emphasis is given to the management problems of private ski areas (special courses, seminars, internship programs, etc.) but the program is sufficiently flexible to permit specialization in several types of private recreation management. Course work is concentrated in the areas of business and natural resource management.

The Junior Year
Economics of Outdoor Recreation and Tourism, RM 225 3 —
Forest Recreation Planning, RM 135 3 —
Foundations of Marketing, BSAD 54 3 —

Water Management Elective 3 —
Electives 4

Total Program Requirements, Semester Hours 127
RESOURCES ECONOMICS

This program deals with the application of economic theory to natural resource allocation problems. It prepares an individual to use the logic of economics and the perception of conservation to recommend the efficient and equitable use of natural resources. Graduates will be prepared for positions in natural resource management and administration.

Total Program Requirements, Semester Hours 122

ENVIRONMENTAL STUDIES Students interested in Environmental Studies may enroll in the School of Natural Resources (see page 131). They may have a coordinate major or major in Environmental Studies.
The Environmental Program

Environmental Studies — Agriculture
Bachelor of Science
Environmental Studies — Arts and Sciences
Bachelor of Arts
Environmental Studies — Education and Social Service
Bachelor of Science
Environmental Studies — Engineering, Math & Business Admin.
Bachelor of Science
Environmental Studies — Home Economics
Bachelor of Science
Environmental Studies — Natural Resources
Bachelor of Science

The Environmental Program is a University-wide program of undergraduate education, research, and community service dedicated to the study of the cultural and biophysical environments essential to the quality of life on earth. It seeks to serve the needs of students for sound education and career preparation and the needs of society — two goals that strengthen one another in practice.

The Environmental Program is an interdisciplinary venture involving students and faculty from throughout the University, as well as community professionals, recognizing that study of the environment involves all disciplines and professional fields. Thus, the Program is not a unit of any single college or school of the University, but works cooperatively with a wide range of academic programs and action organizations on campus and in the community.

While the Environmental Program attempts to serve a wide array of environmental interests, its primary focus is the individual student. A Director and interdisciplinary faculty assist students in planning an individualized program of studies which combines a broad, comprehensive understanding of the environment and depth in a specific discipline or profession leading to a future career. Program offices are located in The Bittersweet where students are invited to visit with the staff regarding their academic plans, to gain assistance with research or action projects, and to seek information about community internships and future employment.

The Environmental Studies curriculum

The curriculum in Environmental Studies offers students several alternatives leading to an individualized program of studies: The Coordinate Major in Environmental Studies combines study of the environment with a traditional disciplinary major or professional field. The Major in Environmental Studies provides a unique opportunity for the student seeking an individually-designed interdisciplinary major.

Students entering the University may apply for admission to Environmental Studies through several of the undergraduate colleges and professional schools. Choice of the appropriate college or school will depend on the individual's interests and educational objectives or, in the case of the Coordinate Major program, on the major or professional field to be coordinated with Environ-
mental Studies. It is recommended that incoming students consult with the Director of The Environmental Program before making application to the University.

DEGREE REQUIREMENTS

Students must complete the distribution requirements and minimum credit-hour requirements of their College or School, and one of the following Major Programs. Incoming students will be assigned an advisor in The Environmental Program who will assist the student in selecting a major program during the sophomore year.

COORDINATE MAJOR IN ENVIRONMENTAL STUDIES

For the majority of students this program offers the best combination of career opportunities and environmental interests. In addition to the Environmental Studies Core Program, the student completes the departmental requirements of a related disciplinary or professional major in his or her college or school, and an individualized program of studies and independent work which strengthens the environmental aspects of the major.

Departmental Major Program

(Consult other sections of the Catalogue for major requirements and actual credit hours) 40-60

Coordinate Option — three to five advanced courses, approved by The Environmental Program, with environmental emphasis. These courses may be in the student’s major field, a closely-allied discipline, or from several supporting fields 9-15

(Education students seeking certification in Environmental Education in elementary or secondary education: See page 80 of catalogue.)

Electives — including College or School Distribution Requirements. (which may include Environmental Studies 191, 195, 196) 32-60 (approx.)

Total Credits 120 + *

*(Consult appropriate College or School section of Catalogue for exact credit requirements)

**MAJOR IN ENVIRONMENTAL STUDIES**

This interdisciplinary major offers qualified students the opportunity to combine studies in a variety of disciplines and professional fields. Each student’s program is individually-designed, rather than shaped around an existing departmental major. While this major is less structured than the Coordinate Major, it provides the opportunity to direct study toward newly-developing environmental careers and graduate study programs. It is especially suited to the student seeking a broad liberal education with an environmental thrust.

Admission to this major requires approval of The Environmental Program and successful completion of Environmental Studies 51. In addition to course requirements, the major includes a required senior research thesis, internship, or substantial independent project.

Reserve Officers’ Training Corps

Army

GENERAL Army ROTC college graduates receive regular or reserve commissions as officers in the United States Army. The University’s Department of Military Studies offers courses in world military affairs to all University students, whether or not they are members of ROTC. Additionally, special courses offer basic education and training in military subjects, with emphasis on leadership.

PROGRAMS Two programs are offered: (1) A four year program comprising one course per term and a summer camp for five weeks between junior and senior year. (2) A two year program comprising one course per term during the junior and senior years, and two summer camps for five weeks each. Students are given pay and travel allowance for summer camp(s).

SCHOLARSHIPS Scholarships, available for four, three, two years and one year, provide tuition, books, laboratory fees and similar educational expenses, plus $100.00 a month for up to ten months a year. The commitment is four years on active duty.

Applications for the four-year scholarships are made during the senior year in high school. Normally the cut-off date for submission is December 15. Interested students should request application forms from the U.S. Army Headquarters nearest to their home. Students living in the Eastern United States should write to: Army ROTC, P.O. Box 12703, Phil., Pa. 19134.

FLIGHT TRAINING The Army ROTC Flight Training Program is open to qualified seniors. It is designed to train a reserve pool of Army aviators and affords students the opportunity to qualify for a Federal Aviation Agency private pilot’s license. On-campus ground and in flight instruction under FAA licensed instructors is provided without cost.

POSTGRADUATE DEFERMENT Upon graduation, ROTC students are normally commissioned as officers in the U.S. Army Reserve and agree to serve on active duty for three years, subject to call to such duty. However, active duty may be deferred for as many as four years for those who wish to pursue an advanced degree while studying as full-time graduate students.

Courses offered: See page 246.

Air Force

GENERAL UVM students are eligible to participate in the Air Force ROTC program at St. Michael’s College in nearby Winooski, Vermont. The St. Michael’s College Department of Aerospace Studies offers courses in Air Power, National Security Forces and in Leadership and Management. For further information, contact the Department of Aerospace Studies, St. Michael’s College, Winooski, Vermont 05404. Their telephone number is (802) 655-2000, ext 281 or 282.
The Living/Learning Center

The Living/Learning Center is five residential facilities, interconnected through a central commons, each housing 120 students in suites of from five to seven. Scattered throughout the Living/Learning Center are fifteen apartments for resident faculty and their families and visiting scholars and artisans, and offices for non-resident faculty. There are classrooms, reading room and reference library, computer terminals, music rooms, a pottery and a craft shop, and a graphic design studio. Included also are recreation and laundry rooms, a pre-school, a dining room and snack bar, and the offices of the Center for Research on Vermont and of Foreign and International Programs.

A University-wide residential educational facility, the Living/Learning Center exists to serve all UVM students and academic programs. Students live in the Living/Learning Center by participating in programs developed either by faculty members in their areas of academic expertise or by students whose program proposals have been accepted for Living/Learning Center support of space, facilities, and budget.

Living/Learning Center programs may supplement an existing course of study or define a totally new educational direction, and they must incorporate those educational objectives basic to the purpose of the University and the Living/Learning Center — acquisition of knowledge, development of skills, development of creative abilities and discipline, and personal and group development. All academic credit is administered by the University’s regular departments. The Living/Learning Center does, however, maintain rigorous and ongoing evaluations of all of its programs to insure continuing benefit to the academic goals of the students and the University.

Above all, the Living/Learning Center is a community of people — students, faculty, and administrative staff — who share the goal, work, and excitement of together improving the scope and quality of their University experience. Recent programs have included Chinese, Film Making, Medieval/Renaissance Studies, History-English-Philosophy, Veterinary Interest, Women’s Studies, Small Ensemble, Russian, German, and Early Childhood Development.

For information contact the Office of the Director, Living/Learning Center.
The Graduate College

The purpose of the Graduate College is to serve the needs of the college graduate who desires a broader and more thorough knowledge of scholarship and research in his chosen field. The College offers the following programs leading to the Master's degree and to the degree of Doctor of Philosophy. Each student is expected to be familiar with the general regulations and procedures of the Graduate College, and with the specific degree requirements in his chosen field of study. For detailed information refer to the Graduate College Catalog available from the Graduate College Office, 332 Waterman Building.

Master of Arts

Programs are offered in the following fields:

- Communication
- English
- French
- Geography
- German
- Greek & Latin
- History
- Political Science
- Psychology

Master of Science

Programs are offered in the following fields:

- Agricultural Economics
- Anatomy
- Animal Sciences
- Animal Pathology
- Biochemistry
- Biomedical Engineering
- Biostatistics
- Botany
- Chemistry
- Civil Engineering
- Communication Disorders
- Computer Science
- Electrical Engineering
- Forestry
- Geology
- Home Economics
- Mathematics
- Mechanical Engineering
- Medical Microbiology
- Medical Technology
- Microbiology
- Natural Resource Planning
- Pathology
- Pharmacology
- Physics
- Physiology and Biophysics
- Plant and Soil Science
- Statistics
- Zoology

Master of Arts in Teaching

This degree is appropriate for teachers who are interested primarily in increasing their knowledge of their subject matter fields and thereby the effectiveness of their classroom instruction. Programs are offered in the following fields:

- Botany
- Chemistry
- English
- French
- Geography
- Geology
- German
- Greek & Latin
- History
- Occupational Education
- Mathematics
- Physics
- Zoology

Master of Science for Teachers

This degree is designed primarily for secondary school teachers who wish to strengthen their backgrounds in their subject matter field, and who desire flexibility in choosing courses at levels best suited to their needs. Programs are planned on an individual basis.

- Biology (Botany & Zoology)
- Geology
- Mathematics
- Physical Sciences (Chemistry & Physics)
Master of Education

The master of education degree is intended to give those who work in education the kind of background and professional preparation needed for leadership in teaching and functions related to it. Programs are planned on an individual basis with special attention to such fields as:

- Administration
- Foundations of Education
- Occupational and Practical Arts Education
- Reading and Language (Elementary and Secondary)
- School Counseling (Elementary and Secondary)
- Special Education
- Student Personnel Services in Higher Education
- Teacher Education

Master of Business Administration

Study leading to the degree of Master of Business Administration is designed to provide an opportunity for the individual to develop knowledge and understanding in a wide range of business activities that will provide foundation for growth and success in a business career. Programs are planned on an individual basis.

Master of Extension Education

This degree is designed to provide opportunity for those who work in non-school educational and counseling programs to develop knowledge and understanding in activities related to program management and educational methodology. Programs are planned on an individual basis with special attention to fields such as:

- Agriculture
- Business and Industry
- Family Centered Services
- Youth Organizations

Doctor of Philosophy

Programs are offered in the following fields:

- Anatomy
- Animal Sciences
- Biochemistry
- Botany
- Chemistry
- Electrical Engineering
- Mechanical Engineering
- Microbiology
- Pharmacology
- Physiology and Biophysics
- Plant and Soil Science
- Psychology
- Zoology

Fifth Year Certificate in Education

A special fifth year program culminating in a certificate of advanced study is offered by the Department of Education for students who wish to work beyond the bachelor’s degree. It is especially designed to meet the needs of teachers who are developing new teaching fields, for advanced students who are meeting requirements for state certification, and for experienced teachers who desire flexibility in choice of courses at both graduate and undergraduate levels. Information about the certificate program may be obtained by contacting the Dean of the College of Education and Social Services.

Concurrent Degrees

Post-sophomore fellows in medicine are permitted to use credit from appropriate medical courses toward an M.S. or a Ph.D. They are enrolled in the Graduate College for one or more years to pursue research and enroll in such courses as would normally not be included within a medical program. Such
persons, therefore, are working toward an M.D. and M.S. or Ph.D., but completion of each degree may occur at a different time.

All courses for which graduate credit is received at UVM in a master's degree program, whether a master's degree is received or not, may be applied toward a Ph.D. at UVM provided they are appropriate for the Ph.D. program.

No provision is made for a person to employ the same credit to satisfy two master's degrees at the University of Vermont.
Continuing Education

Through Continuing Education the University provides opportunities for formal and informal study to persons who have not attended college, who require additional training in their work, or who wish to pursue previously unexplored areas of study.

The Summer Session

Summer Session offers courses in many subjects at both the graduate and undergraduate level.

The offerings are diversified to meet the needs of those who desire courses leading to a bachelor's degree; those who wish to do graduate work; principals and superintendents of schools who desire fundamental or specialized courses in the fields of educational administration and supervision; teachers in elementary or secondary schools who seek credit toward state teachers' certificates, or who desire to broaden their knowledge of special subjects; persons who desire college level courses for self-improvement.

It is recommended that any regularly matriculated student at the University of Vermont obtain prior approval from his academic dean for any courses to be taken in the Summer Session. The purpose of this recommendation is to insure such courses are appropriate for the degree for which the student is working.

The master's degree in several, but not all, areas may be earned through work in the Summer Session. Enrollment in courses for graduate credit does not imply admission to the Graduate College. Details about available courses and programs will be sent on request by the Director of Continuing Education.

Evening Division

The University's Evening Division program provides educational opportunities for adults. Members of the faculty at the University, and others working under temporary appointment, offer evening or extension courses in many disciplines both at the Burlington Campus and at locations throughout Vermont. Many courses may be taken for credit but some are non-credit courses designed for the adult who is interested in continuing his education for pleasure or self-improvement.

Courses are given in towns and cities throughout the state wherever a group of ten or more individuals register for a course.

Arrangements for Evening Division courses are made through the Evening Division, Grasse Mount. Length of courses varies from ten to fifteen weeks.

It is recommended that any regularly matriculated student at the University of Vermont obtain prior approval from his academic dean for any courses to be taken in the Evening Division. The purpose of this recommendation is to insure such courses are appropriate for the degree for which the student is working. All persons desiring graduate credit must secure the approval of the Dean of the Graduate College at the time of registration.

Non-Degree Student Enrollment

Non-degree students are persons who have presented minimum credentials and are permitted to undertake limited course work in the day program for
purposes other than that of earning a degree. Credits earned by non-degree students who later apply and gain admission to a degree program will be evaluated and, if appropriate, will be accepted toward completion of their degree. Non-degree students may enroll for a maximum of 6 credits (or two courses) per semester in the day program; additional courses may be enrolled for only with permission from the appropriate Academic Dean. Undergraduate non-degree students may not exceed a total accumulation of 30 semester credit hours without special permission from the Dean of the college involved. Graduate students are limited to a total accumulation of 9 semester hours.

Undergraduate Non-degree Students, those seeking only undergraduate credit for course work taken, apply for approval to the Division of Continuing Education which will act as their college office.

Graduate Non-degree Students, those seeking graduate credit, must register through the Graduate College.

Selection of courses for those having long range plans of earning a degree should be made on the basis of information given in this catalog. Students interested in making a formal application for admission to the University should contact the office of Admissions, Clement House.

Students presently enrolled and in good standing at another institution may take courses at the University of Vermont to transfer to their institutions. Visiting students are considered non-degree students and should contact the Division of Continuing Education for information and registration material.

All non-degree students who would like assistance in planning educational programs and selecting courses should contact the Division of Continuing Education at Grasse Mount. (telephone 656-2085)

Conferences and Institutes

Conference activity is a rapidly increasing part of University life. Both throughout the regular college year and during the summer, many conference groups make use not only of University classroom and auditorium facilities but also of University dormitories and dining service. Groups interested in arranging for meetings or conferences at the University should contact the Conferences and Institutes Office, Grasse Mount. This office also coordinates the Speakers Bureau through which University personnel are made available to organizations outside the campus.

Church Street Center for Community Education

The Center, located in the restored Ethan Allen Firehouse on Burlington's Church Street is a Clearinghouse for information on University and community educational activities and operates a year-round program of lectures, films, readings, study groups, and non-credit mini-courses and workshops, in response to expressed and perceived community needs. It draws upon the combined talents and resources of the University and the larger community.

CONTINUING EDUCATION ACADEMIC SCHEDULE

1976-77

FALL SEMESTER

Registration

Non-Degree Students in Evening Courses Aug. 24-27, Tues.-Fri.
Full-time Degree Students in Evening Courses Aug. 31, Tues.
Non-Degree Students in Day Courses Sept. 10, Fri.
Classes Begin

Jan. 17, Tues.  
Jan. 27, Fri.  
Jan. 18, Wed.  
Jan. 23-27, Mon.-Fri.
Courses of Instruction

The University reserves the right to change these course offerings at any time.

The departments and areas of instruction are arranged alphabetically, and the college in which each is located is indicated.

A student who lacks the stated prerequisites for a course, but is otherwise qualified to take it, may be permitted to enroll by the department.

Courses numbered from 1 through 99 are elementary and intermediate courses.

Those numbered from 100 through 199 are advanced undergraduate courses. They usually have at least one year of prior work in that discipline as a prerequisite. They may be taken as minor courses, but in some departments only a limited number may be taken as major courses. They are not ordinarily available for graduate credit.

Courses numbered from 200 through 299 are relatively more advanced courses for undergraduates which may also be taken for graduate credit by graduate students. They usually require at least two years of prior work in that and related disciplines. To obtain graduate credit the graduate student generally is expected to meet higher qualitative or quantitative expectations than the undergraduate student.

Two numbers with a comma between (17, 18) indicate that the separate semester courses may be taken independently for credit.

Two hyphenated numbers (17-18) indicate that the semester courses may not be taken independently for credit and, unless otherwise stated, they must be taken in the sequence indicated.

The number of credit hours per semester is stated in each course description.

Odd-numbered courses are generally offered the first semester; even-numbered courses are generally offered the second semester; variations from this arrangement may be indicated by the Roman numeral I for the first semester or II for the second semester.

The form (2-3) immediately following the course title indicates the number of class hours respectively of lecture and of laboratory.
Agricultural and Resource Economics

COLLEGE OF AGRICULTURE
Professors Sinclair (Chairman), Sargent, Tremblay, and Webster; Associate Professors Fife and Gilbert; Assistant Professor Schmidt; Adjunct Professor Houghaboom; Adjunct Associate Professors Bevins and Eddy; and Adjunct Assistant Professor Bigalow.

Program in Agricultural Economics

2 World Food and Population Agricultural development with emphasis on natural and economic phenomena and the effect of food supplies on population trends and policies. Three hours. Tremblay.

51 Agricultural Finance Capital requirements of agriculture, financial problems of farmers, types and sources of credit, policies and practices of lending institutions. Alternate years, 1977-78. Three hours. Sinclair.

61 Principles of Agricultural and Resource Economics Introduction to principles of economics through the analysis of problems of agricultural production and resource development. Three hours. Staff.

162 Rural Land Use Issues in New England Analysis of the economic and social forces determining rural land use patterns in New England. Emphasis on Vermont issues, including factors affecting rural land use patterns and growth of noncommercial agriculture. Prerequisite: 61 or equivalent. Three hours. Sargent.

166 Small Business Management Theoretical and practical considerations in organizing and operating small businesses. Emphasis on financing, accounting, budgeting, investment analysis, and tax management. Prerequisite: Sophomore standing. Three hours. Fife.

195, 196 Special Topics in Agricultural Economics Readings and discussion of selected topics in agricultural economics at an undergraduate level. Prerequisite: Departmental permission. Credit as arranged. Staff.

197, 198 Undergraduate Research Work on a research problem under the direction of a staff member. Findings submitted in written form as prescribed by the department. Prerequisite: Senior standing. Three hours. Staff.

201 Farm Business Management Organization and operation of successful farm businesses with emphasis on resource allocation, production efficiency, and marginal analysis. Field trips required. Prerequisites: Economics 11, 12, or Agricultural and Resource Economics 61; Junior standing. Three hours. Tremblay.

205 Rural Communities and Modern Society (See Sociology 205).

207 Markets, Food, and Consumers Market structure, prices, and economic forces involved in the movement of farm products from producers to consumers. Prerequisite: Economics 11, 12, or Agricultural and Resource Economics 61. Three hours. Webster.

208 Agricultural Policy History and institutional development of agricultural policy. Price and income problems of American agriculture and
alternative solutions. **Prerequisite:** Economics 11, 12, or Agricultural and Resource Economics 61. Alternate years, 1976-77. Three hours. Sinclair.

210 **Marketing Institutions** Agricultural marketing institutions servicing northeastern U.S. Reading, lectures, and extended field trip. **Prerequisites:** Six hours in agricultural economics and permission of instructor. Three hours. Webster and Tremblay.

218 **Community Organization and Development** (See Sociology 207).

254 **Advanced Agricultural Economics** Theories of supply and demand analysis, price determination, market structure, and income distribution in competitive and imperfectly competitive markets. **Prerequisites:** Twelve hours in resource economics and/or economics, and permission of instructor. Three hours. Sinclair.

255, 256 **Special Topics in Agricultural and Resource Economics** Readings and discussion of selected topics in economics at an advanced level. **Prerequisite:** Departmental permission. Credit as arranged. Staff.

256 **Economics of Managerial Decisions** Applying economic concepts to problems of capital budgeting, tax planning, pricing, demand analysis, and discounting cash flows. Cases. **Prerequisite:** Economics 11, 12, or equivalent. Three hours. Fife.

Program in Resource Economics
(For descriptions of the following courses, refer to the School of Natural Resources, page 125.)

121 **Resource Economics**
151 **Tourism Business Management**
157 **Ski Area Management**
222 **Natural Resource Evaluation**
225 **Economics of Outdoor Recreation and Tourism**
233 **Regional Planning**
234 **Advanced Regional Planning**
235 **Legal Aspects of Planning and Zoning**
243 **Spatial Analysis I** (See Geography 243)

**Allied Health**

**DIVISION OF HEALTH SCIENCES**

2 **Dynamics of Health Care** Introduction to the whole pattern of comprehensive health care; a core course for students in the health career programs. Two hours. Allied Health staff.

197 **Principles of Education and Management for Allied Health**
This course is designed to introduce procedures and methods of instruction in various teaching situations with the opportunity to design and participate in a teaching activity. Concurrent offering is an introduction to the basic principles
in management, supervision, and administration. Project emphasis on investigation of concepts for projecting new patterns to meet the needs of future health care systems. Two lectures per week, projects assigned. Three hours. Fall semester. Staff.

198 Management Project Analysis of current designs and methods used in existing physical therapy facilities. Group activity to design management models based on problem-solving. Two hours. Spring semester. Physical therapy students or permission of instructor. Staff.

Anatomy

COLLEGE OF MEDICINE

Professor Young (Chairman); Associate Professors Freedman and Wells; Assistant Professors Boushey, Kriebel, Krupp, Ryugo and Schwaber.

9 Introductory Human Anatomy (3-4) Designed principally for students in the Allied Health professions, this course focuses upon topographic human anatomy. By use of prosections, radiographs, microscope slides and other illustrative materials, the student studies the major regional relationships in the human body, as well as the appropriate microscopic correlations in organ systems. Department permission. Four hours. Young.

101 Gross Anatomy for Physical Therapists (3-6) This course is designed to place emphasis upon the structural and functional aspects of the human musculoskeletal, peripheral nervous, cardiovascular and respiratory systems. Lectures will correlate clinical applications of functional anatomy where appropriate. Detailed regional dissections, radiographs, prosections, skeletal materials and other materials will be utilized in the laboratory. Department permission. Five hours. Kriebel.

102 Neuroanatomy — Histology for Physical Therapists (2-3). With primary emphasis upon the structural basis of central nervous system function, this course will also examine the functional micromorphology of other organ systems (esp., musculoskeleton, cardiovascular, respiratory and integumentary). This course is designed to supplement Anatomy 101. Lectures will focus upon the principles of functional organization, with clinical examples where appropriate while the laboratory will utilize microscope slides, movies and gross preparations of the central nervous system. Prerequisite: 101. Department permission. Three hours. Schwaber.

Animal Pathology

COLLEGE OF AGRICULTURE

Professor Bolton (Chairman); Associate Professor Murray; Adjunct Associate Professor Wadsworth.

105 Animal Anatomy Gross and microscopic structure of the organ systems of the mammalian body with emphasis on farm animals. Three hours. Murray.
106 Animal Diseases  Fundamentals of disease recognition and prevention in domestic animals. Special disease problems in cattle and horses with emphasis on control measures. Prerequisite: 105 recommended. Three hours. Murray.

110 Wildlife Diseases  Common diseases and parasitic problems of large game animals, small fur-bearing animals, waterfowl and game birds. Autopsy techniques and diagnostic laboratory procedures. Prerequisites: Two courses in biology or zoology. Three hours. Bolton. Alternate years, 1976-77.

195, 196 Special Topics  Departmental permission required. 1-3 credit hours. Staff.

197, 198 Senior Research  Work on a research problem under the direction of a qualified staff member. Findings submitted in written form as prescribed by the department. Prerequisite: Senior standing. Three hours. Staff.

220 Laboratory Assignments  Rotating assignments in the Animal Pathology Laboratory and Division of Animal Services under the guidance of the professional staff. Prerequisite: Departmental permission. Three hours. Staff.

Animal Sciences

COLLEGE OF AGRICULTURE
Professors Atherton, Balch, Carew, Duthie, Nilson, Smith (Chairman), and Welch; Associate Professors Foss, and Simmons; Assistant Professor Gilmore; Adjunct Associate Professors Mercia and Woelfel, and Adjunct Assistant Professors Gibson and Leamy.

2 Introductory Animal Science  Fundamental principles of anatomy, physiology, nutrition, breeding and management of animal species important in our agricultural economy. Three hours. Smith, Staff.

33 Introductory Dairy Technology (2-2)  Basic information on milk and milk products and application of this information in laboratory exercises. Three hours. Duthie.

43 Fundamentals of Nutrition I, II  A comprehensive study of specific nutrients in terms of their availability, function, utilization, and requirements in mammalian species. Three hours. Carew.

44 Dairy Cattle Selection (2-3)  Fundamental principles of dairy cattle selection and breeding. Three hours. Gibson.

114 Manufactured Dairy Products (2-3)  Methods and technical problems in manufacturing milk products such as cheese, butter, evaporated
and dry milks. **Prerequisites:** 33, Junior standing. Three hours. Nilson. Alternate years, 1977-78.

120 **Sensory Evaluation of Foods (1-4)** Taste and odor as basic components of flavor, sensory tests for consumer acceptance studies and practical training in flavor identification. Three hours. Duthie.

131 **Qualitative Genetics of Domestic Animals and Cultivated Plants** An introductory course in qualitative genetics. Examples from familiar species are used to demonstrate the principles of inheritance. **Prerequisite:** Botany 4 or Zoology 9 or equivalent. Three hours. Gilmore.

140 **Principles of Animal Feeding (3-3)** Principles of meeting the nutrient requirements of animals, especially as they relate to the practical problems of formulation and production systems. **Prerequisite:** 43. Four hours. Welch.

158 **Introduction Avian Biology (3-3)** Designed for students with general interests in biology. Topics—Evolution, comparative structure and function, behavior, migration and orientation, flight, identification, population regulation. Four hours. Foss.

171 **General Physiology** An intermediate course, especially designed for the biology student to increase his knowledge of animal functions at the organ system level in mammals. **Prerequisite:** Animal Pathology 105 or equivalent. Three hours. Foss.

177 **Livestock Production (2-3)** Organization and operation of livestock enterprises. Theory and application of feeding, breeding and management programs and principles. **Prerequisite:** 140. Three hours. Welch.

187, 188 **Light Horse Production and Management (2-3)** The problem of light horse production. Application of the principles of selection, management and horsemanship. **Prerequisites:** 187 or 188; Junior standing. Three hours. Balch.

190 **Poultry Production (2-3)** Organization and operation of poultry enterprises. Theory and application of feeding, breeding and management programs and principles. **Prerequisite:** 140. Three hours. Mercia.

197, 198 **Undergraduate Research** Research activity under the direction of a qualified staff member. Findings submitted in written form as prescribed by the department. **Prerequisites:** Junior standing and department permission. Three hours. Staff.

211 **Ice Cream and Frozen Dairy Products (2-3)** Fundamentals of ice cream manufacturing, the physico-chemical and biological factors involved; calculation of formulas; sherbets and specialties; merchandising; sanitary control. **Prerequisites:** 104; credit or concurrent enrollment in 109; Junior standing. Three hours. Nilson. Alternate years, 1977-78.

232 **Quantitative Genetics in Animal and Plant Improvement** Principles of quantitative and statistical genetics including systems of mating and forces which change gene frequency are studied in relation to animal and plant breeding. **Prerequisite:** Introductory course in genetics, Stat. 111 or permission of instructor. Three hours. Staff.
246 Advanced Nutrition (See Home Economics 246) Three hours. Tyzbir.

249 Nutrition Seminar (See Home Economics 249) Three hours. Tyzbir and Carew.

250 Dairy Cattle Management (2-3) Organization and operation of dairy enterprises. Theories and methods of application of feeding, breeding, and management programs and principles. Prerequisite: 140. Three hours. Woelfel.

270 Endocrinology (2-2) Anatomy, physiology, glandular interrelationships, and assay methods of the endocrine glands and their hormones. Prerequisite: Departmental permission. Three hours. Simmons.

275 Physiology of Reproduction and Lactation (2-2) Fundamental principles of the physiology of reproduction and lactation with the primary emphasis on farm animals. Three hours. Simmons.

281, 282 Animal and Dairy Science Seminar Reports and discussions of problems and special investigations in selected fields. One-three hours. Maximum credit two hours senior, three hours graduate. Smith.

291 Special Problems in Animal and Dairy Science Reading, discussion, and special laboratory investigation in the field of animal and dairy science. Prerequisite: Departmental permission. A student may enroll more than once for a maximum of six hours. Staff.

294 History of Nutrition (See Home Economics 294) One hour. Staff.

Anthropology

COLLEGE OF ARTS AND SCIENCES

Professor Haviland (Chairman); Associate Professors Magnarella, Mitchell, Woolfson; Assistant Professors C. Pastner, S. Pastner, Power.

Anthropology

21 Human Cultures The culture concept; the lifeways of non-Western societies of varying social complexity. Three hours. Staff.

24 Introduction to Prehistoric Archaeology The origins and antiquity of culture; the nature of archaeological data and interpretation. Three hours. Power.

26 Physical Anthropology An introduction to the study of the evolution and racial differentiation of humanity. Three hours. Haviland.

50 Language in Culture This course is designed to provide background in linguistic anthropology. Three hours. Woolfson.

51 Field Methods in Linguistics Training in the Anthropological methods of obtaining linguistic data. Each student will work with an informant whose native language is other than English. At the end of the semester, each
student will present a phonemic inventory of the pertinent sounds in the language he or she has explored. Prerequisite: 50 or Linguistics 101. Woolfson.

160 North American Indians An ethnographic survey of the major native American cultures of Mesoamerica and the United States against the background of aboriginal culture history, and problems arising from contact with European cultures. Prerequisite: 21. Three hours. Haviland.

161 Cultures of South America An ethnographic survey of the major native American cultures south of Mesoamerica against the background of aboriginal culture history, and their relation to the present day culture spheres of Euro-America, Indo-America and Plantation America. Prerequisite: 21. Three hours. Haviland.

162 Cultures of Africa An ethnographic survey of representative native societies of sub-Saharan Africa and of major colonial/immigrant minorities. Emphasis is placed on changes occurring as results of colonialism, independence and modernization. Prerequisite: 21. Three hours. C. Pastner, S. Pastner, Power.

163 Cultures of Oceania A survey of the ethnography and cultural history of the major cultural areas of Oceania, viz., Australia, Melanesia, Micronesia and Polynesia. Prerequisite: 21. Three hours. Mitchell.

165 Peoples of South Asia The culture and social organization of the peoples of Pakistan, India, Bangladesh and Sri-Lanka. Theoretical issues in the anthropological analysis of these societies will be discussed. Prerequisite: 21. Three hours. S. Pastner.

166 Peoples of the Middle East A cultural survey of the peoples living in the lands from Egypt to Afghanistan with emphasis on the Arabs, Turks and Persians. Prerequisite: 21. Three hours. Magnarella.

167 Native and Contemporary Peoples of Canada An exploration of the cultures of Canada's minorities — both native and immigrant; focuses on the background traditions of these minorities and the cultural conflicts engendered in the Canadian experience. Prerequisite: 21, or Geography 102, or History 214, or History 216. Three hours. Woolfson.

170 Pastoral Peoples An examination of the social and economic organization of peoples whose main livelihood is the migratory herding of animals, against a backdrop of environmental pressures and participation in larger social systems. Prerequisite: 21. Three hours. S. Pastner.

172 Women, Society and Culture A cross-cultural treatment of women which emphasizes the interrelationships between female status, social organization and ideological systems. Prerequisite: 21. Three hours. C. Pastner.

175 Ethnography of Art The analysis of the art of tribal and non-western peoples, with emphasis on the visual arts of Africa, Oceania and North American Indians. Particular attention is paid to the relation of art to social organization and ideological systems. Prerequisite: 21. Three hours. C. Pastner.

180 Cultural Ecology Interrelationships of social groups and their natural environments and resource bases, with primary emphasis on non-industrial cultures. Empirical and theoretical materials from hunting-gathering, pastoral and peasant peoples will be examined from the perspectives of anthropology and geography. Prerequisite: 21 or Geography 11. Three hours. Gade, S. Pastner (team taught).
185 College Culture The exploration and study of college student culture through the literature and the application of anthropological research techniques. Topics covered include: student living arrangements and the socio-cultural and personal use of space; ethnographies of college cultural scenes; student social networks and their determinants; and, the formation and character of student peer groups and communities. Prerequisite: 21 or Sociology 10. Three hours. Magnarella.

193, 194 College Honors
195, 196 Special Topics
197, 198 Readings and Research

212 Culture and Personality The cross-cultural comparison of personality development; the problem of delineating modal personality types. Prerequisites: Sociology 10, Anthropology 21 and one 100 level course in Sociology or Anthropology. Three hours. Mabry, Magnarella, Steffenhagen.

225 Current Anthropological Theory Schools of Anthropological thought examined in relation to data on non-western societies and the historical and social context in which the anthropologist works. Included are Evolutionism, Cultural Ecology, Functionalism, Relativism, Diffusionism, Structuralism and the Cognitive school. Prerequisites: 21 plus one 100 level course. Three hours. Magnarella, S. Pastner, C. Pastner.

228 Social Organization The study of social relationships of peoples living in various cultures and in different parts of the world; focuses on such topics as residence, descent and kinship in tribal organization and community life. Prerequisite: 21 and one 100 level course. Three hours. Magnarella, Mitchell.

229 Political and Economic Anthropology The analysis of traditional exchange and subsistence systems and the ways these relate to interest-based, or political behaviors. Prerequisites: 21 and one 100 level course. S. Pastner.

262 Cultural Geography (Same as Geography 262).

267 The Franco Americans A seminar designed to explore the cultural patterns of the French speaking peoples in New England, with particular reference to Vermont. Attention is paid to persistence and change in traditional French Canadian Society and Culture in New England. Individual research projects are required. Prerequisite: Permission of instructor. Three hours. Woolfson.

270 Revitalization Movements An examination of prophetic, millenarian and revolutionary sects and movements with an emphasis on non-western, non-industrial societies. Specific movements will be viewed in their cultural context. Analytical perspectives will be drawn from a variety of disciplines. Prerequisites: 21 and one advanced course in Anthropology, Sociology or Religion. Three hours. S. Pastner.

283 Culture Change The study of Socio-cultural transformations in non-western countries with emphasis on such topics as industrialization, urbanization and modernization and their impact on the lives of previously traditional peoples. Prerequisites: 21 and one 100 level course, or 21 and six hours in the social sciences. Three hours. Magnarella.

284 Urban Anthropology The study of urbanization and urban life in non-western countries including such topics as urban-rural ties, peasant migra-
tions, and socio-cultural adjustment to urban living. **Prerequisites:** 21 and one 100 level course, or 21 and six hours in the social sciences. Three hours. Magnarella.

**290 Methods of Ethnographic Field Work** Examination of the theoretical and ethical premises of field work methodology with practical experience using selected techniques including participant observation, interviewing, the genealogical method and the recording of data. **Prerequisite:** Twelve hours of anthropology. Three hours. Mitchell.

**295-296 Advanced Special Topics** **Prerequisites:** 21 and one 100 level course.

---

**Area and International Studies**

**COLLEGE OF ARTS AND SCIENCES**

**Executive Committee:** Professors Ambrose, Brewer, Dellin, Engroff, Kinnard (Director), Mabry, Miles, Murad and Thompson

**Asian Studies:** Professors Alnasrawi, Andrews, Berninghausen, Brewer, Davison, Deming, Engroff (Director), Gussner, Kahn, Leinbach, Little, Magnarella, McHenry, Mitchell, C. Pastner, S. Pastner, Schmidt, Seybolt, Swanson, Vandermeer, and Yodav.

**Canadian Studies:** Professors Baskerville, Benoit, Haugen, London, Metcalf; Miles (Director), Muller, Stanfield, Thompson, Woolson and Young.

**European Studies (Western, Northern, Mediterranean):** Professors J. Ambrose, P. Ambrose (Director; on sabbatical 1976-77), Andrea, Barnum, Bradley, Bryan (Co-Director), Chapman, Davison, Dellin, Dickerson, Finney, Fengler, Howe, Hutton (Co-Director), Kinnard, Lewis, Martin, Metcalf, Perrine, Richel, Roland, Stephany, Ugalde, and Whitebook.

**Latin American Studies:** Professors Doolan, Dowe, Finney, Gade, Gould, Haviland, Murad (Director), Sargent, Simon, Spinner, Stone, True, Ugalde, Waitckin, Weiger, and Zarate.

**Russian and East European Studies:** Professors Daniels, Dellin (Director), Flannery, Mabry, Meeks, Nalibow, Pacy, Paganuzzi, Pomar and Staron.

**General and other colleges:** Professors Case, Hilberg, Julow, Kahn, Schmoke, Shiman, Stone, Tremblay, Vogelmann, and Webster.

**193, 194 College Honors**

**195, 196 Special Topics**

**197, 198 Readings and Research**

**297, 298 Seminar** Conducted by a team of area specialists and covering selected topics through interdisciplinary and comparative approaches. **Prerequisite:** Permission by the executive committee of Area Studies. Other area courses are offered by the individual academic departments. For specific requirements for each area, consult the Director of the appropriate program.
Art

COLLEGE OF ARTS AND SCIENCES

Professors J. Davison and Janson (Chairman); Associate Professors W. Davison, Hewitt,* Lipke,* Owre; Assistant Professors Fengler, Okino, Rindler, Roland, Versweyveld; Instructors Blasdel, Spivak; Lecturers Aschenbach, Higgins, Liebs and Parris.

1 Introductory Studio Introduction to visual thinking and awareness, projects focusing on basic concepts of two- and three-dimensional objects and images. Three hours. Staff.

2 Basic Drawing The structure and reconstruction of visual experience through drawing, and the transformation of three-dimensional experiences on to a two-dimensional surface. Three hours. Staff.

3 Two Dimensional Studies Primary concern with surfaces and imagery utilizing various aspects, depending on instructor, of painting, drawing, graphics and photography. Three hours. Staff.

4 Three Dimensional Studies Exploration of manipulative materials and structural form, utilizing various aspects, depending on instructor, of sculpture and construction. Three hours. Staff.

Note: Art 1 will be closed to students with more than one of 2, 3, 4 while 3 or 4 may in certain cases be taken more than once if with a different instructor.

11 Introduction to Fine Metals Basic Fine Metals techniques; soldering, forging, forming, fusing, stone setting, and primitive casting methods. Prerequisite: Instructor's permission. Three hours. Spivak.

13 Introduction to Ceramics Basic design and practice in ceramics. Hand-built and thrown forms, firing and glazing. Prerequisite: Instructor's permission. Three hours. Okino.

21, 22 Drawing An intense investigation of drawing and elements that relate to the discipline. Prerequisite: 2. Three hours. Owre.

111, 112 Fine Metals Advanced techniques in enamels and silver jewelry. Independent work emphasizing design and skill. Prerequisites: 4 and permission. Three hours. Spivak.

113, 114 Ceramics Advanced techniques in throwing and hand-building. Clay and glaze technology, kiln theory and construction. Prerequisites: 4 and permission. Four hours. Okino.

121, 122 Painting The structure and process of the tradition of painting; with emphasis on the visualization of space and the dimensions and dynamics of color. Prerequisites: 1 or 2 and 3. Three hours. Staff.

131, 132 Printmaking: Etching and Silkscreen Including stencil, resist and photo-silkscreen. Prerequisites: 1 or 2 and 3 and permission, 131 for 132. Four hours. Davison.

* on sabbatical leave 1976-77.
133, 134 Printmaking: Lithography Planographic printing, and lithography, stressing design and technical control. *Prerequisites:* 1 or 2 and 3 and permission, 133 for 134. Four hours. Davison.

141, 142 Sculpture Advanced explorations of manipulative materials. *Prerequisites:* 4 and one of 2, 21, 22. Three hours. Aschenbach.

147 Visual Environment An exploration of public spaces, structures, architectural detail, landscaping, roadways, lighting, etc. Field trips; meetings with planners, and architects; projects *Prerequisites:* 1 or 2 and 3 or 4. Three hours. Owre.

193 College Honors

195 Special Topics

197 Reading and Research *Prerequisite:* Departmental permission. Three hours. Staff.

281 Directed Studies Individual or group studies in a special area. *Prerequisites:* Six hours advanced in the chosen area and permission. Three hours. Staff.

Art History

5, 6 Art History Painting, sculpture, and architecture in the western world. First semester: Egyptian through Gothic; second semester: Renaissance to the present. *Prerequisite:* 5 for 6. Three hours. Fengler, Roland.

7 Architecture An introduction to architecture, its changing form, structure, and purpose from antiquity to the present. Three hours. Janson. Alternate years.

9 Visual Studies A non-historical examination of visual experience, artifacts, buildings and environment, and the distinction between aesthetic and ordinary visual data. Three hours. Lipke.

51 Greek Art History of art in Greek lands in ancient times. Emphasis on sculpture, architecture, and vase painting. *Prerequisite:* Sophomore standing. Three hours. J. Davison.

52 Roman Art Development of Roman art styles out of Greek forms. *Prerequisite:* Sophomore standing. Three hours. Staff.

153 Medieval Art to the Year 1000 Painting, sculpture and architecture from the early Christian through the Ottonian periods, with emphasis on Byzantine and Carolingian art. *Prerequisite:* 5. Three hours. Roland. Alternate years, 1975-1976.

158 Northern European Art 1400-1600 Netherlandish and German art of the period. Special attention to Jan van Eyck, Rogier van der Weyden, Hugo van der Goes, Durer, Bosch, and Bruegel. *Prerequisite:* 6. Three hours. Fengler.
161 **Italian Renaissance Art** Painting, sculpture and architecture in Italy, 1400-1600. *Prerequisite:* 6. Three hours. Fengler.

168 **Baroque Art in Northern Europe** The art of the Netherlands, Flanders, and England in the 17th Century, with emphasis on the paintings of Rembrandt, Vermeer, Rubens, and Van Dyck. *Prerequisite:* 6. Three hours. Roland.

172 **Modern European Painting** The major French, English, and German developments in painting from Realism to Surrealism, 1850-1940. *Prerequisite:* 6 or 9. Three hours. Lipke.

175 **19th-Century Architecture** Building and design from the late 18th Century to the end of the 19th, as shaped by architects, engineers, and entrepreneurs. *Prerequisite:* 6 or 9. Three hours. Janson.

179 **Art Since 1945** Recent American painting and sculpture, and parallel developments in Europe. *Prerequisite:* 172, advanced studies in studio, or permission. Three hours. Staff.

194 **College Honors**

196 **Special Topics**

198 **Readings and Research** *Prerequisite:* Departmental permission. Three hours. Staff.

207 **Studies in American Art** Selected topics in American art and architecture, individual research and reports. *Prerequisite:* By permission to students of Art History, American History or Literature. Three hours. Janson.

210 **Studies in Modern Art** Topics in 19th and 20th century art, individual research and reports. *Prerequisites:* 105 or 6 and 54, and permission. Three hours. Roland.

224 **Architecture and the Environment** (See History 224) *Prerequisites:* Six hours advanced in art and architecture, and permission. Three hours. Liebs.
282 Directed Studies Individual or group studies in a special area. **Prerequisites:** Six hours advanced in the chosen area and permission. Three hours. Staff

285, 286 Museum Studies Museum methods as concerning the research, care and administering of a collection, aesthetic insight and the communication of ideas. **Prerequisites:** Junior standing and permission. Three hours. Parris.

### Biochemistry

**COLLEGE OF MEDICINE**

*Professors Bresnick, Lamden (Chairman), Melville, and Woodworth; Associate Professors Cutroneo, Meyer and Thanassi; Assistant Professor Hart.*

102 Biochemical Analysis (2-4) Lectures, conferences, and laboratory exercises concerned with the theory and techniques of importance in the quantitative analysis of biological materials. Primarily for students of medical technology but open to others with permission of the department chairman. **Prerequisite:** Chemistry 1-2. Four hours. Lamden.

191, 192 Undergraduate Research Participation in a research program currently being pursued by a faculty member of the Department. A written report is due at the end of each semester. **Prerequisites:** Chemistry 1, 2 or 11, 12. Some programs may require additional courses in chemistry. Credit as arranged, up to 4 hours per semester. Staff.

204 Instrumentation Laboratory (1-3) Primarily for medical technology students. Mechanical, optical, and electrical features of selected instruments are studied as an aid to their proper use and maintenance. **Prerequisite:** 102 or 211-212, or equivalent experience in biochemical laboratory work. Three hours. Melville.

211-212 Biochemistry for Health Sciences (2-4) Primarily for medical technology students. Lectures provide a comprehensive study of mammalian biochemistry particularly as it relates to man. Medically-oriented experiments utilizing modern clinical chemistry techniques are performed in the laboratory. Case studies from the files of the MCHV are used to correlate lecture and laboratory material. **Prerequisites:** 102 or quantitative chemistry; organic chemistry. Physiology is strongly recommended. Four hours per semester. Hart.

### Botany

**COLLEGE OF AGRICULTURE**

*Professors Dodge,1 Gershoy,2 Hyde (Chairman), Klein, Marvin,2 Sproston,2 Taylor2 and Vogelmann; Associate Professors Cook and Etherton; Assistant Professors Ullrich and Worley; Assistant Plant Pathologist Gotlieb; Herbarium Curator Barrington.*

1 Visiting professor.
2 Emeritus.
Biology

1, 2 Principles of Biology (3-3) Introduction to the structure, functions, and evolution of animals and plants. Emphasis on concepts important for advanced study in a Life Science and for understanding the biological world of which man is a part. **Prerequisite:** 1 for 2. Four hours. Botany and Zoology Staffs.³

3 Biology and Man An introduction for nonscience majors. Selected biological topics relevant to man such as cancer, human genetics, environmental toxicants; and biological principles and concepts necessary for an understanding of these problems. Three hours. Botany and Zoology Staffs.³

255 Structure and Function of Chromosomes Advanced analysis of recombination in eucaryotes. Arrangement of DNA and proteins in chromosomes. DNA duplication and mapping of certain DNA regions. Molecular nature of meiotic processes and control of gene expression with particular reference to the nucleolus. **Prerequisites:** Biology 101; Chemistry 16 or 131, 132. Three hours. Hyde.

256 Cytology Principles of structure in biological macromolecules and cellular organelles such as membranes, chloroplasts, and chromosomes. Their composition, origin and relationship between their structure and function. **Prerequisites:** Biology 103 or permission of the instructor; Chemistry 16 or 131, 132. Three hours. Hyde.

Botany

4 Introduction to Botany (3-3) Structure, function, and reproduction of plants. Fundamental aspects of plant science with implications of botanical knowledge needed for applied plant sciences. Four hours. Klein.

6 The Green World An evaluation of the impact of plants on the aesthetic, cultural, social, medical, and religious lives of peoples of the world. Three hours. Klein.

101 Genetics (see Biology 101.)

104 Physiology of the Plant Body (3-3) Study of the plant as a whole, growth and development, water and mineral relations, environmental factors, and regulatory processes. **Prerequisites:** 4 or Biology 1, 2; Chemistry 1, 2. Four hours. Etherton.

105 Plant Diversity (3-3) A survey of major plant groups. Structural and developmental changes associated with the evolution of vascular plants. **Prerequisite:** 4 or Biology 1, 2. Four hours. Cook.

109 Systematics and Phylogeny (2-4) Classification; evolution of flowering plants; characterization and recognition of major families; species and generic concepts; biosystematics; taxonomic keys; preparation of herbarium specimens. **Prerequisite:** 4 or Biology 1, 2. Four hours. Vogelmann.

117 Plant Pathology (3-2) Diagnosis, life history and control of plant diseases caused by fungi, viruses, bacteria, nematodes, parasitic higher plants and environmental factors. Physiology, biochemistry and genetics of host-parasite interactions. **Prerequisite:** 4 or Biology 1, 2. Four hours. Ulrich.

151 Plants and Man The place of plants in man's affairs. The influence of plants on exploration, migration and the development of civilizations. The role of plants in the world today, with special emphasis on food, drug, fiber
and other useful plants and on the botanical features which contribute to their usefulness. **Prerequisite:** Principles of Biology or Botany 4. Three hours. Staff.

152 **Plant Anatomy and Histology (2-4)** Development of the organism and accompanying integration of cellular tissues. Ontogeny of vegetative tissues; modifications of the cell wall. **Prerequisite:** 4 or Biology 1, 2. Four hours. Staff.

160 **General Ecology** Analysis of the environment and its effects upon organisms; interrelationships among organisms; ecological adaptations. **Prerequisite:** 4 or Biology 1, 2. Three hours. Worley.

3 Credit will not be given for both Biology 1, 2 and Botany 4. Credit will not be given for both Biology 1, 2 and Biology 3. Botany and Zoology majors will not receive credit for Biology 3.

162 **General Ecology Laboratory (0-3)** Field work and experiments to illustrate concepts presented in Botany 160. **Prerequisite:** Previous or concurrent enrollment in 160. One hour. Worley.

197, 198 **Undergraduate Research and Apprenticeships** Individual projects under the direction of a faculty member. The project may involve original research, readings, or apprenticeships. **Prerequisite:** Junior standing. Three to six hours.

201 **Electron Microscopy (2-4)** Theory and practice of electron microscopy including microscope operation, specimen preparation, and interpretation of electron micrographs. **Prerequisite:** Departmental permission. Four hours. Staff.

205 **Mineral Nutrition of Plants** (see Plant and Soil Science 205)

207 **Water Relations of Plants** (see Forestry 207)

213 **Plant Communities (2-2)** Plant sociology; structure and organization of the plant community; sampling methods and analysis of data; climatic and edaphic factors; field work. **Prerequisite:** 109 or departmental permission. Three hours. Vogelmann. Alternate years, 1976-1977.

232 **Botany Field Trip** Trips to selected environments outside Vermont. Led by several faculty members representing different fields of Botany. Emphasis will be on overall, integrated approach to ecology, structure, and function. One hour. Staff. Christmas or spring vacation or end of school year.

250 **Microtechnique (1-4)** Theory and practice in the preparation of biological materials for anatomical and cytological study, including histoch­emistry and photomicrography. **Prerequisites:** Introductory Chemistry; some knowledge of organic chemistry, anatomy, or cytology is desirable. Three hours. Cook. Alternate years, 1976-77.

253 **Mycology (2-4)** Taxonomy, genetics, physiology, ecology and economic importance of the fungi. Representatives of each major group are explored with respect to the above. Includes microbiological technique and laboratory culture of the fungi. **Prerequisites:** 101 or 104 or permission of the instructor. Four hours. Ullrich. Alternate years, 1976-77.

257 **Physiology of the Plant Cell (3-2)** Detailed study of photosynthesis, plant cell membrane function, and plant cell growth. **Prerequisites:** Botany 104, Chemistry 131, 132 or Chemistry 16, Physics 11, 12 or 15, 16. Four hours. Etherton. Alternate years, 1976-77.
259 Plant Growth and Development (3-3) Chemical and physical factors regulating growth and development of plant tissues and the plant body. Morphogenesis and differentiation. Prerequisites: 104, departmental permission. Four hours. Klein. Alternate years, 1976-77.

260 Phycology (2-4) The morphology, classification, and general biology of the algae, with special consideration of the freshwater forms. Prerequisite: 105, or two courses in zoology or botany above 100. Four hours. Cook. Alternate years, 1976-77.

281, 282 Botany Seminar A topical seminar consisting largely of presentations of personal research by faculty and graduate students from within and outside the University. May be jointly sponsored with related departments. Required attendance of botany graduate students and seniors in botanical research programs. Without credit. Staff.

295 Special Topics Courses for small groups of selected advanced students within areas of general expertise of faculty and staff. Various aspects of ecology, physiology, genetics, cytology, bryology, pteridology, paleobotany, photobiology, membrane physiology, and cell biology. Prerequisite: Permission of the department.

Business Administration

COLLEGE OF ENGINEERING, MATHEMATICS AND BUSINESS ADMINISTRATION
Professors Greif, Nyquist and Severance (Chairman); Associate Professors Laber, Michael, Shirland, and Squire; Assistant Professors Antil, Battelle, Gatti, Hutt, Schermerhorn, and Tashman; Adjunct Instructors Erdmann and Kittell.

Business Environment and General Business

17, 18 Business Law First semester: concepts of law as related to business, including law of contracts, sales, bailments, and negotiable instruments. Second semester: business and laws of agency, partnerships and corporations. Three hours. Staff.

133 Government and Business The role of government in the private sector. Emphasis is placed on the problem of industrial concentration, the history and enforcement of anti-trust legislation, and the conflicting goals of economic efficiency and political feasibility. Prerequisite: Economics 12. Three hours. Squire.

191 Senior Seminar in Interfunctional Decision Analysis A variety of important managerial decision questions are examined. The viewpoint is global rather than functional. Problems addressed include make or buy, plant location, product addition, and expansion. Prerequisite: Senior standing. Three hours. Severance.

195, 196 Special Topics

197, 198 Readings and Research
297, 298 Seminar Review of recent books and periodical literature; discussions and reports on topics of contemporary interest. Prerequisite: Permission of the department. Three hours. Staff.

Accounting

60 Financial Accounting (3-2) An introduction to generally accepted accounting principles and techniques regarding corporations, partnerships and proprietorships, as they apply to income determination and financial position presentation. Four hours. Staff.

61 Managerial Accounting (3-2) Introduction to the use of accounting for planning, cost behavior and control, and decision making. Prerequisite: 60. Four hours. Staff.

161-162 Intermediate Accounting Principles, concepts, techniques and issues involved in accounting for the assets, liabilities and owners equity and their related effect on income determination of an enterprise. Prerequisites: 61 for 161; 161 for 162. Three hours. Battelle, Michael.

164 Basic Federal Taxes An examination of the Internal Revenue Code primarily regarding income tax law for individuals, and partnerships. Corporate, estate, and trust tax law will be introduced. Prerequisite: 60. Three hours. Michael.

264 Fund Accounting Study of accounting principles and practices of governmental organizations including appropriation systems, funds, revenues accounting for other non-profit organizations, and third party reimbursement accounting for Medicare and health insurance intermediaries. Prerequisite: 161-162 or experience in public administration. Three hours. Michael.

265 Accounting Theory Study of underlying concepts, principles and structure of accounting theory. Topics covered include financial accounting standards, opinions of the APB, professional literature and current applications. Prerequisite: 162. Three hours. Battelle.

266 Advanced Accounting Accounting for partnerships, special sales contracts, parent-subsidiary relationships, fiduciary relationships and governmental units. Prerequisite: 162. Three hours. Nyquist.

267 Auditing Study of the C.P.A. as an independent auditor. Topics covered include standards, ethics and legal responsibilities of the profession, financial statements, audit concepts and techniques, and the audit opinion. Prerequisite: 266. Three hours. Battelle.

268 Cost Accounting Accounting for inventory valuation and income determination, non-routine decisions, policymaking and long range planning. Prerequisite: 61. Three hours. Nyquist.

Financing and Banking

180 Managerial Finance I The financial function in the corporation is described. Techniques for evaluating current use of resources and proposed resource acquisitions or dispositions are covered. Fund raising and dispersement practices are studied. Prerequisites: 61, 144, Economics 12. Three hours. Laber.

184 Financial Institutions and Markets  Financial institutions and credit allocation, determinants of the level and term structure of interest rates, and characteristics of financial institutions and markets. Prerequisites: 60, 144, Economics 12. Three hours. Gatti, Severance.

185 Commercial Bank Management  Problems facing bank managers are examined and solution techniques developed. Specific topics include asset selection, liability management, bank accounting systems, and the regulatory system. Prerequisite: 184. Three hours. Severance.

281 Municipal Finance  An examination of the issues and policy options facing the financial administrators of municipal governments. Topics include property and non-property taxation, debt and cash management, budgeting, expenditure and revenue forecasting, and intergovernmental aid programs. Prerequisite: 180. Three hours. Tashman.

283 International Financial Management  Theories and practices of international financial management are examined. Topics include: systems of international exchange, spot and forward markets and expropriation and exchange risk as parameters in investment and financial decisions. Cases used. Prerequisites: 180, 184. Three hours. Gatti.

Management

140 Introduction to Decision Making Under Uncertainty  Probability models as applied to the optimal choice among alternative actions or strategies when outcomes are uncertain. Sample information is handled using Bayesian techniques to revise prior probability distributions. Prerequisite: 40 or equivalent. Three hours. Staff.

170 Organizational Behavior  An introductory course in organizational behavior focusing on ways through which individuals and work groups within organizations can be better utilized as organizational resources. Prerequisite: Three hours of psychology or sociology. Three hours. Schermerhorn.

173 Operations Analysis  This course presents an overview of the organization, the firm, the interrelationship of functions, and the fundamental principles of management. The major orientation of the course being in production. Prerequisites: 40, 42, 61, 144 and Economics 12. Three hours. Staff.

242 Management Information Systems  The problems of designing business information processing systems. Manual and computer based systems are evaluated in terms of cost versus effectiveness. Systems design and programming projects are undertaken using the COBOL language. Prerequisites: 42 and 173. Three hours. Staff.

271 Personnel Management  The personnel function in organizations; selecting and training employees, job analysis and evaluations; and wage administration. Prerequisite: 70 or 170. Three hours. Staff.

Marketing Management and Sales Promotion

151 Principles of Marketing Management  Focus on the major types of decisions facing the marketing executive. Emphasis on developing the
analytical content of marketing. Case application also included. Prerequisites: 54, Economics 12. Greif.

153 Personal Selling and Sales Management Personal selling as a communication activity. Behavioral sciences are explored. Sales Organization, coordination of related department functions, methods of selecting, training, compensating and controlling are considered. Individual projects. Prerequisite: 151 or 154. Three hours. Greif.

154 Foundations of Marketing The place of marketing in our economy. Analysis of the market structure by function, institutions and commodities. Selected cases used to develop the analytical content of marketing. Prerequisites: Economics 12, Junior Standing. Four hours. Hutt.

156 The Marketing Operations of Small Retail and Service Establishments An understanding of the primary elements of marketing management involved in the practical planning and operating decision problems facing the retailer. Prerequisite: 54 or 154. Three hours. Greif.

157 Marketing Research The role of research in a marketing information framework. Emphasis on data collection methodology. Prerequisite: 40, 144, 151 or 154. Three hours. Staff.

158 Fundamentals of Advertising Principles and techniques of copy, layout, media selection and campaign development. Actual preparation of advertisements. Prerequisite: 54 or 154 or consent of instructor. Three hours. Staff.

257 Consumer Behavior An exploration and evaluation of the body of research evidence from marketing and the behavioral sciences relevant to a theory of consumer behavior. Emphasis is also given to research methodologies employed. Prerequisite: 157. Three hours. Hutt.

258 Current Marketing Developments Discovery and analysis of both internal and environmental changes affecting marketing theory and practice. Topics include: social change, functional and institutional marketing system change, and legislative and regulatory trends. Individual research projects required. Prerequisite: 151 or 154. Three hours. Greif.

259 Marketing Management The use of advanced cases to aid in the formulation of overall policies and planning strategies for marketing programs. Topics include product planning and channel selection. Prerequisite: 151 or 154. Three hours. Greif.

Quantitative Methods and Computers

40 Introduction to Quantitative Methods in Management The fundamental deterministic models used by managers as aids in decision making. Attention is given to the logic underlying each model, and a working knowledge of logarithms, exponential equations, calculus, linear algebra, and probability theory is developed. Prerequisite: Two years of high school algebra. Four hours. Staff.

See course Mathematics 18.

42 Introduction to Computing I (2-2) The two weekly lectures are identical to those of Math 115, but students enrolling in 42 attend separate labs where programming problems with business applications will be examined. Business Credit will not be given without completion of the Business labs. Three hours. Staff.

See course Computer Science II.
144 Elements of Statistics (3-1) See course Statistics 111.

244 Applied Regression Analysis The nature and applications of basic regression-correlation models in investigating relationships, testing hypotheses and making predictions. Emphasis on the art of developing appropriate models and evaluating existing research. Prerequisite: 144. Three hours. Tashman.

245 Introduction to Operations Research Application of quantitative techniques to the formulation and solution of management decision problems. Topics include linear programming applications, inventory management, and service center cost-effectiveness measurement. Prerequisites: 40, 42, 144, and 173. Three hours. Staff.

Chemistry

COLLEGE OF ARTS AND SCIENCES

Professors Allen, Flanagan, Gregg, Krapcho, Kuehne, and Wulff; Associate Professors Brown, Strauss, and Weltin; Assistant Professors Deming, Ledlie, Gieger, and Sayer.

Note: Credit cannot be given for: 1, 2 and also 11, 12; 3, 4 and also 1, 2; 140 and also 141, 142.

1, 2 Introductory Chemistry (3-3) The important principles, ideas and concepts of general chemistry. Either this course, or Chemistry 11, 12 should be elected by all students planning subsequently to take any 100 level course in chemistry. Prerequisite: 1 or 11 for 2. Four hours. Gregg, Weltin, Flanagan.

3 Outline of General Chemistry (3-3) A one-semester course in the principles, ideas and concepts of general chemistry, with particular emphasis on those aspects of the subject of importance to the biological and health sciences. Four hours. Flanagan, Brown, Deming, Wulff.

4 Outline of Organic and Biochemistry (3-3) A brief introduction to some of the important and interesting aspects of organic and biochemistry. Credit cannot be granted for both Chemistry 4 and 16. Prerequisite: 1, 3, 5 or 11. Four hours. Sayer.

5 Concepts of Chemistry (3-3) A one-semester course in the principles, ideas and concepts of general chemistry for students in engineering programs. Four hours. Gregg.

7 Earth, Air, Fire and Water (3-3) An introductory course intended for non-science majors. It deals with man’s chemical understanding of his surroundings. Concepts of energy, structure, and change as related to the observable universe. Emphasis on understanding topics of current interest and on the chemical interpretation of biological systems. Four hours. Staff.

11, 12 General Chemistry (3-6) Includes general experiments in elementary qualitative and quantitative analysis. Recommended for those concentrating in chemistry or physics. Prerequisites: One year of high school chemistry and concurrent enrollment in Mathematics 21 or 23 for Chemistry 11. Chemistry 11 or 12. Five hours. Allen.
13, 14 The Chemical Bond  Nature of interatomic and intermolecular forces. Stereochemistry, bond energies, and crystal structures are considered. Prerequisites: 1, 2 or 11, 12. One hour. Gregg.

16 Introductory Organic Chemistry (3-3) A one-semester introduction to the more important and interesting aspects of organic chemistry. (Does not satisfy medical school entrance requirements regarding undergraduate preparation in organic chemistry.) Credit cannot be granted for both Chemistry 16 and 4. Prerequisite: Either 1, 3, 5 or 11. Four hours. Sayer, Ledlie.

123 Quantitative Analysis (3-3) Theory and practice of gravimetric and volumetric methods of analysis. Theoretical discussion of indicators, buffers, pH, etc. Prerequisites: 1, 2. Not open to students with credit for 11, 12. Four hours. Geiger.

131, 132 Organic Chemistry (3-3) Organic chemistry for chemistry majors, premedical students, and those concentrating in the biological and physical sciences Prerequisites: 1, 2 or 11, 12; 131 for 132. Four hours (may be taken without laboratory for three hours credit by chemistry majors who intend to enroll in 134 and 135). Kuehne, Ledlie, Strauss.

134 Organic Chemistry Laboratory (0-6) Laboratory practice in organic synthesis with an emphasis on separation and purification procedures. Introduction to spectral methods of structure identification. Prerequisite: 131. Two hours. Staff.

135 Advanced Organic Chemistry Laboratory (0-6) Chemical and physical methods of identifying organic compounds. Advanced synthetic and separation procedures. Prerequisites: 131, 134. Two hours. Staff.

140 Physical Chemistry for Biological Science Students Aspects of physical chemistry most pertinent to work in the biological sciences: acid-base equilibrium, theory of solutions, thermodynamics and kinetics. Prerequisites: 2, Physics 16. Three hours. Weltin.

141, 142 Physical Chemistry Elementary quantum chemistry, introduction to statistical mechanics, thermodynamics, properties of solutions and chemical kinetics. Prerequisites: 2 or 12; Physics 16; Mathematics 123 or 121 for 141. Three hours. Weltin, Wulff.

201, 202 Advanced Chemistry Laboratory (1-8) Modern analytical, physical and synthetic techniques. Syntheses requiring advanced methods such as controlled atmosphere box, autoclave, photochemical reactor, etc. Selected basic physical chemistry experiments. Development of techniques used for measurement of a variety of phenomena, e.g. thermochemistry, kinetics, electrochemistry, spectroscopy. Students wishing to take one semester only may concentrate in a particular area of interest, such as instrumental analysis. Prerequisites: 11, 12 or 123; credit for or concurrent enrollment in 141 and 142. Four hours. Weltin, Wulff.

212 Advanced Inorganic Chemistry Structure, bonding, and reactions of inorganic compounds. Ionic compounds, the lanthanides; theories of acids and bases; electron-deficient bonding; covalent bond chemistry; simple models for structure prediction; introduction to crystal field theory; substitution reactions of transition metal complexes. Prerequisite: 142 or equivalent. Three hours. Allen, Brown.

213 Advanced Inorganic Chemistry Application of symmetry
concepts to inorganic chemistry; ligand field theory and electronic spectra; multiply-bonded systems; metal carbonyls; introduction to organmetallic chemistry; biologically important inorganic complexes. **Prerequisite:** 212. Three hours. Allen, Brown.

223 **Chemical Instrumentation** The design and usage of modern instrumentation to facilitate chemical research. Selected laboratory studies in instrumentation and analysis. **Prerequisites:** 201, 202, or consent of instructor. Credit as arranged with maximum of four hours. Geiger. Offered as occasion warrants.

231 **Physical Organic Chemistry-Principles** Structure-reactivity relationships, molecular properties and their interpretation. Methods and results of investigations of mechanisms of common organic reactions. **Prerequisites:** 132, 142 or 247 or permission of instructor. Three hours. Ledlie.

242 **Chemical Kinetics and Mechanisms** Theoretical and experimental aspects of chemical kinetics. Use of kinetics to deduce mechanisms of organic and inorganic reactions. Gaseous reactions, catalysis, isotope and solvent effects, chain reactions and very fast reactions. **Prerequisites:** 141, 142. Three hours. Flanagan, Sayer.

246 **Fundamentals of Spectroscopy** A general discussion of molecular spectroscopy, rotational and vibrational states of molecules, symmetry of vibrations; introduction to electronic spectra. **Prerequisite:** 141, 142, Mathematics 124 or permission of the instructor. Three hours. Weltin. Alternate years.

247 **Introduction to Quantum Mechanics** General considerations of quantum mechanics. Development of techniques pertinent to the application of quantum mechanics to chemical problems. **Prerequisite:** 141, 142 or equivalent. Three hours. Weltin.

248 **Chemical Thermodynamics** Systematic study of the application of thermodynamics to chemical problems. Concepts of statistical thermodynamics to be introduced. **Prerequisite:** 141, 142 or equivalent. Three hours. Wulff.

249 **Statistical Mechanics** Development of statistical mechanics and its application to problems of chemical interest. **Prerequisite:** 141-142 or equivalent; 247 recommended. Three hours. Flanagan. Alternate years.

251, 252 **Advanced Organic Chemistry** Detailed discussion of fundamental principles and reactions in organic chemistry. Stereochemistry, conformational analysis, ring strain, reactivity criteria in the main reaction classes, reaction mechanisms, and important synthetic methods are discussed. **Prerequisites:** 131, 132, credit for or concurrent enrollment in 141, 142, 251 for 252. Three hours. Kuehne.

271 **Advanced Analytical Chemistry** A systematic survey of modern methods of chemical analysis. Principles and applications of analytical and molecular spectroscopy, electrochemistry, and separation techniques. **Prerequisites:** 141, 142. Three credits. Geiger.

284 **Physical Inorganic Chemistry** Ligand field theory, magnetic properties, magnetic resonance techniques (NMR, ESR, and NQR), Mossbauer spectroscopy, and optical activity. *Prerequisites:* 213 or equivalent, 246 or permission of the instructor. Three hours. Alternate years. Allen, Brown.

Seminars are required of graduate students and seniors concentrating in chemistry.

184 **Senior Seminar** Oral and written presentation of a subject of current chemical interest. *Prerequisite:* Audit of 381. One hour. Staff.

197, 198, 199 **Undergraduate Research** Special study in inorganic, physical, or organic chemistry and with an assigned staff member. Findings submitted in written form. *Prerequisites:* 1, 2 or 11, 12 and departmental permission. Credit as arranged with a maximum of four hours per semester and twelve hours for the undergraduate program. 197 is offered in the fall, 198 in the spring, and 199 in the summer.

**Chinese**

**COLLEGE OF ARTS AND SCIENCES**

Messrs. Berninghausen, Swanson, and Staff.

1-2 **Elementary Chinese** A study of Mandarin Chinese designed to give the beginning student the fundamental grammar and vocabulary for speaking, reading and writing the modern national language. Four hours. Berninghausen.

11, 12 **Intermediate Chinese** A continuation of Chinese 1-2 designed to enable the student to converse in everyday Chinese, and to read and write simple texts. *Prerequisite:* 2 or equivalent. Four hours. Berninghausen.

21, 22 **Introduction to Classical Chinese** An introduction to pre-Han classical Chinese literature. Emphasis will be on syntax, sentence structure, and style of various authors. *Prerequisite:* 2 or permission of the instructor. Three hours. Swanson.

121, 122 **Advanced Chinese** Structured readings with emphasis on sentence structures, vocabulary expansion and increased fluency in self-expression. *Prerequisite:* 12 or equivalent. Four hours. Staff.

211 **Modern Chinese Literature** Short stories, plays, essays and poetry of literary merit from the May Fourth period to the Cultural Revolution. All texts in Chinese, classes conducted in putonghua (Mandarin). *Prerequisite:* 12 or permission of instructor. Three hours. Berninghausen.

212 **Modern Expository Chinese** Speeches, Communist Party documents, newspaper articles, scholarly writings. This course designed to acquaint the student interested in social science research or post-1949 China with the terminology and language current in the People's Republic of China. All texts in Chinese, some discussion in putonghua. *Prerequisite:* 121 or permission of instructor. Three hours. Seybolt. Berninghausen.
Classics

COLLEGE OF ARTS AND SCIENCES

Professors Ambrose (Chairman), Bliss, Davison, and Gilleland; Associate Professor Schlunk.

Greek
(There are no prerequisites to any Greek course. Students who have previously studied Greek should consult the department.)

1-2 Elementary Greek Four hours. Staff.

111, 112 Prose Composition Required of students who concentrate in Greek. Greek 111: one hour. Greek 112: two hours. Staff.

193, 194 College Honors
195, 196 Special Topics
197, 198 Readings and Research

201 Greek Orators Three hours. Gilleland. Alternate years, on demand.
202 Greek Comedy Three hours. Schlunk. Alternate years, 1976-77.
203 Greek Historians Three hours. Bliss. Alternate years, 1976-77.
204 Greek Tragedy Three hours. Ambrose. Alternate years, on demand.
205 Greek Philosophers Three hours. Schlunk. Alternate years, on demand.
206 Greek Epic Three hours. Bliss. Alternate years, on demand.

Latin
(There are no prerequisites to any Latin course. Students who have had two years of high school Latin normally enroll in Latin 5 or Latin 12. Those who have had more normally enroll in Latin 101. Students with two years of high school Latin may take Latin 1 for credit only by departmental permission and only if the two years were taken two years prior to entrance into the University.)

1, 2 Elementary Latin For students who present less than two years of high school Latin. Four hours. Staff.

5 Advanced Elementary Latin Extensive review of Latin syntax. Selections from prose writers. Three hours. Staff.

12 Intermediate Latin Selections from Vergil and Ovid. Three hours. Staff.

101, 102 Survey of Latin Literature Selections from the principal Roman authors. Three hours. Staff.

111, 112 Latin Prose Composition Required of students who major in Latin and of those who wish to be recommended to teach Latin. Latin 111: one hour. Latin 112: two hours. Staff.
193, 194 College Honors
195, 196 Special Topics
197, 198 Readings and Research
203 Republican Prose Three hours. Davison.
204 Epic Poets Three hours. Schlunk.
252 Comedy Three hours. Bliss. Alternate years, on demand.
253 Roman Oratory Gilleland. Alternate years, on demand.
255 Historians of the Empire Three hours. Davison. Alternate years, on demand.
256 Satire Three hours. Gilleland. Alternate years, on demand.

Courses Requiring No Knowledge of Greek and Latin

Greek 32 Mythology1 Greek myth in literature, art, and music from antiquity to modern times. No prerequisites. Three hours. Spring semester. Ambrose.

Greek 151 Greek Drama in Translation Three hours. Staff. On demand.

Greek 153 Greek Historians in Translation Three hours. Staff. On demand.

Latin 32 Etymology2 Derivation of English words from Greek and Latin bases. Training in analysis of unfamiliar words, special attention to scientific vocabulary. Three hours. Staff.

Latin 152 Roman Epic in Translation Three hours. Staff. On demand.

Latin 154 Roman Satire in Translation Three hours. Staff. On demand.

1 This course may be used towards the distribution requirements of the College of Arts and Sciences in either category A or B.
2 This course may be used towards the distribution requirement of the College of Arts and Sciences in category A as part of the non-foreign language courses.

See also: Art 51 (Greek Art) and Art 52 (Roman Art); European Studies; General Literature 151 (Development of Prose Fiction); History 9 (Ancient Mediterranean Civilization), 105 (Ancient Near East), 106 (Greek History), and 107 (Roman History).

For The Teaching of Latin, see Secondary Education 179.

Prizes from endowed funds are awarded to outstanding graduating seniors and outstanding students in sophomore Latin.
Communication and Theatre

COLLEGE OF ARTS AND SCIENCES

Professors Feidner, Lewis, London, and Manchel; Associate Professors Bryan (Acting Chairman), Schenk, and Wilson; Assistant Professors Cover, Guitar, Leake, Lyon, Schultz, Shane, Worden, and Yadav; Instructors Collett, Robbins, and Williams; Lecturers Dilley, Houghton and Orth; Coordinators Daruvala and Turpin.

Communication and Public Address

1 Foundations of Communication Three hours. I, II. Orth.

3 Parliamentary Procedure Prerequisite: Sophomore standing. One hour. Staff.

11 Public Speaking Three hours. I, II. Staff.

14 Group Discussion Theory and performance in small group communication, including preparation, language, leadership, analysis, reasoning, organization and interpersonal relations. Three hours. I, II. Staff.

111 Advanced Public Speaking: Emotive Means of Persuasion Human motivation, attitudes, emotion, stereotypes, attention, and audience psychology as applied in the speaking situation. Prerequisite: 11. Three hours. Staff.

112 Advanced Public Speaking: Logical Means of Persuasion Inductive, deductive, casual, and analogical reasoning as applied in the speaking situation. Prerequisite: 111. Three hours. Staff.

113 Methods of Rhetorical Criticism Introduction to the major principles and theories of speech criticism. Prerequisite: Six hours including 11. Three hours. Staff.

121 General Semantics An analysis of the relationship between language and human behavior. Prerequisite: 1. Three hours. Lewis.

193, 194 College Honors (Available in all areas of the department)

195, 196 Special Topics (Available in all areas of the department)

197, 198 Readings and Research (Available in all areas of the department)

201 Theories of Human Communication A behavioral approach to the role of language, meaning, perception, thinking and social context in human communication process. Prerequisite: Nine hours of related courses, including 1. Three hours. Yadav.

210 Classical Origins of Communication Theory Prerequisite: Nine hours of related courses. Three hours. Leake.

211 Persuasive Communication Selected contemporary approaches to persuasion and the study of recent research contributions. Prerequisite: Nine hours, including 111. Three hours. Leake.

213 Theories of Speech Analysis Principles of speech criticism applied to speakers, speeches, and speech movements. Prerequisite: Nine hours of related courses. Three hours. Leake.
214 Issues in Public Address Each semester this course will emphasize analysis of specific speakers, movements, theses and strategies encompassed by a selected topic of public address. Prerequisite: Nine hours of related courses. (May be repeated up to nine credit hours.) Three hours. Leake.

215 Group Communication Prerequisite: Nine hours of related courses, including 14. Three hours. May be repeated up to nine credit hours. Schultz.

223 Interpersonal Communication Prerequisite: Nine hours of related courses, including 121. Three hours. Lewis. Yadav.

225 Cross-Cultural Communication A study of cultural factors and cognitive process in cross-cultural communication. Prerequisite: Nine hours of related courses. Three hours. Yadav.

283, 284 Seminar Prerequisite: Departmental permission. Three hours. Staff.

294 Seminar for Prospective Teachers of Communication Prerequisite: Twelve hours. Three hours. London.

Mass Communication

161 Audio Production A practicum in the use of audio recording techniques and technology as employed in broadcasting, film and multi-media presentations. Prerequisite: 63. Three hours. Staff.

164 Basic Television Production Prerequisite: 161. Three hours. Dilley.

165, 166 Development of the Motion Picture Prerequisite: 165 for 166. Three hours. Manchel.

167 Basic Filmmaking Theories of film expression. Students produce films. Three hours. Worden.

260, 261 Seminar in Mass Media An intensive examination of selected areas of study related to mass media. Prerequisite: Nine hours of related courses, including 63. Three hours. Staff.

262 Writing for Mass Communication Prerequisite: 63. Three hours. Lewis, Worden.

263 International Mass Communication Mass media systems of other countries, i.e., Britain, Canada. Prerequisite: Nine hours of related courses. Three hours. May be repeated up to nine credit hours. London.

264 Advanced Television Production Emphasis on the following types of programs: educational, news, documentary, dramatic and variety. Laboratory use of the ETV studio. Prerequisite: 164. Three hours. Dilley.

265 Cinematography Advanced study of film expression and production of student films. Prerequisite: 167 or permission of the instructor. Three hours. Worden.

266 Seminar in Film Prerequisite: Six hours of related courses, including 165 or 166. Three hours. May be repeated up to nine credit hours. Manchel.
267 The Contemporary Cinema Lectures, screenings, and reports on modern filmmakers, recent trends and new techniques. Prerequisite: Six hours of related courses, including 165 or 166. Three hours. Manchel.

268 The Black Man in Film A study of black artists in movies from 1895 to the present, with an emphasis on American films. Prerequisite: Six hours of related courses, including 165 or 166. Three hours. Manchel.

269 Broadcast news A study of radio and TV news in the United States in terms of its historical, political, social, and economic roles. Prerequisite: Six hours of related courses, including 63. Three hours. Staff.

Communication Science and Disorders

74 Communication (Speech and Hearing) Science A beginning course for intending majors; physics and biology of human communication. Three hours. Wilson, Staff.

76 Introduction to Communication Problems (Speech Pathology) A general survey course of the problems of communication behavior (speech pathology-audiology). Three hours. Staff. (74 is required of majors.)

81 Voice and Articulation Elements of speech and phonetics for the improvement of voice and articulation in communication. Prerequisite: Sophomore standing. Three hours. Staff.

270 Learning and Development of Speech and Language Speech and language acquisition in relation to current learning theory and methods of linguistic analysis. Prerequisites: Nine hours of speech and psychology, including 74. Three hours. Wilson.

271 Communication Disorders I The etiology, symptomology and principles of habilitation for articulation deviancies, language and fluence disorders. Prerequisites: 74, 101 and 270. Three hours. Shane.

272 Communication Disorders II Problems of voice, cleft palate, cerebral palsy and aphasia. Prerequisite: 281. Three hours. Staff.

273 Principles of Audiology An introduction to clinical audiology including a consideration of hearing disorders, tests of the hearing function, and hearing conservation programs. Prerequisites: Twelve hours of speech and psychology, including 74. Three hours. Houghton.

275, 276 Clinical Study Supervised practicum experiences with children and adults presenting disorders of speech, hearing, and language. Prerequisites: Twelve hours in speech and hearing science courses, including 271 or 272; departmental permission. Credit as arranged. Staff.

278 Neurological Bases of Communication Study of the neurological bases of communication and various behavioral correlates; structure and junction of sensory-motor systems and higher centers. Prerequisites: Nine hours of speech and psychology, including 74. Three hours. Shane.

279 The Preparation, Management and Assessment of Systematic Speech and Language Therapy Principles of behavioral analysis as applied to disorders of communication. Prerequisite: 271 or 272. Three hours. Staff.
281 Anatomy-Physiology of Speech  Prerequisites: Nine hours of speech and psychology, including 74. Three hours. Lyon.

282 Anatomy-Physiology of Audition  Prerequisites: Nine hours of speech and psychology, including 74. Three hours. Staff.

287 Current Research in Language Acquisition  Recent advances in the study of child language. Prerequisite: 270. Three hours. Wilson.

Theatre

31 Oral Interpretation of Literature  A study of communicating orally to an audience, from the printed page, the meaning and beauty of a literary work. Three hours. I, II. Cover.

32 Oral Interpretation of Literature  Prerequisite: 31 for 32. Three hours. 32 may be repeated up to nine credit hours. Cover.

39 Introduction to Theatre  Three hours. I, II. Robbins, Feidner.

41 Acting  Prerequisites: 39; Sophomore standing. Three hours. I, II. Collett.

42 Acting  Prerequisites: 39 and 41 for 42. Three hours. 42 may be repeated up to nine credit hours. Collett.

142 Play Directing  Prerequisite: Six hours, including 39. Three hours.

151 Stagecraft  Scenic elements of play production; analysis of theatre forms, study and application of basic elements of scenery construction. Prerequisite: 39. Three hours. Schenk.

154 Basic Scene Design  Fundamental principles of scenic design, history and practice. Prerequisite: 39. Three hours. Schenk.

240 Dramatic Analysis: Form  An examination of the structural characteristics of the basic forms of drama and the manner in which they affect theatrical representation. Prerequisites: 39 plus three additional hours in Theatre. Three hours. Bryan. Alternate years, 1977-78.

244 Dramatic Analysis: Style  An examination of the manner in which a playwright's manipulation of the parts of a drama is affected by his intellectual and cultural milieu and the physical shape of the theatre for which he is writing. Prerequisites: 39 plus three additional hours in Theatre. Three hours. Bryan. Alternate years, 1976-77.

246 The Medieval and Renaissance Theatre  Medieval and renaissance theatre, accompanied by an evaluation of relevant historical materials and representative dramas. Prerequisites: 39 plus three hours. Three hours. Bryan. Alternate years, 1976-77.

247 Seventeenth and Eighteenth Century Theatre  Dramas and theatrical conditions in Europe and America from the closing of the English theatres to the end of the eighteenth century. Prerequisites: 39 plus three hours. Three hours. Bryan. Alternate years, 1977-78.
248 Nineteenth and Twentieth Century Theatre  Backgrounds, theatrical conventions, and dramas representative of Romanticism, Realism, and revolts against Realism. **Prerequisites:** 39 plus three hours. Three hours. Bryan. Alternate years, 1977-78.

252 Lighting  Theory and practice in the illumination of stage productions and the creation of aesthetic effects. **Prerequisite:** 151. Three hours. Schenk.

254 Advanced Scene Design  Analysis of the drama from the standpoint of its visual creation upon the stage; audience-stage relationships, styles of production. **Prerequisite:** 154. Three hours. Schenk.

**Computer Science**

**COLLEGE OF ENGINEERING, MATHEMATICS AND BUSINESS ADMINISTRATION**

*Professor Dawson; Associate Professors Absher, Hill (Director); Assistant Professors Aggarwal, Fellinger; Lecturers Charbonneau, Cobb, Fischl, Halsted, Kane, Thomas, Whalen.*

3 Computers and Their Applications (3-0) Survey for nonspecialists. Basic concepts and vocabulary. Applications and future trends. Some elementary programming, but not intended for majors in quantitative areas. No credit for C.S. majors. **Prerequisite:** Two years high school algebra. Three hours. Hill.

12 Computer Programming II (3-0) Concepts of programming style. Continuation of programming concepts to include the development of program specifications, efficient organization and coding techniques, documentation, debugging and testing. **Prerequisites:** 11, Math 18, 19, 21, or 23. Three hours. Whalen.

101 Introduction to Computer Science (3-0) Assembly language and machine structure for current host computer (Xerox Sigma 6). Debugging techniques. System services to include I/O services and trap handling. **Prerequisite:** 12. Three hours. Cobb.

102 Software Fundamentals (3-0) An overview of design, concepts associated with assemblers, loaders, compilers and operating systems. **Prerequisite:** 101. Three hours. Halsted.

103 Data Structures (3-0) Lists, Strings, Arrays. Trees and Graphs. Storage systems and structures. Storage allocation and “garbage collection.” Searching and sorting techniques. Generalized data management systems. **Prerequisites:** 12, Math 104. Three hours. Fellinger.

104 Programming Languages (3-0) Formal definition of programming languages including specification of syntax and semantics. Global properties of algorithmic languages including scope of declarations, storage allocations, binding time of constituents and recursive procedures. List processing and string manipulation languages. Precision of arithmetic operations and run time representation of data structures. **Prerequisite:** 102. Three hours. Halsted.
201 Operating Systems (3-0) An introduction to the principle components and algorithms involved in operating systems design and implementation. Memory, processor, device and file management techniques are presented and compared. Protection and security schemes are examined for both memory and file organizations. Synchronization primitives are discussed. Prerequisite: 222. Three hours. Thomas.

202 Compiler Construction (3-0) Practice in the design and implementation of translators for ALGOL-like languages. Regular and context-free grammars, parsing, code generation for stack and register machines. Interpreters. Run-time storage administration for block-structured languages. Prerequisites: 102, 103, 104, or 301. Fellinger.

204 Advanced Systems Programming Advanced study and research in a selected area of systems programming. Prerequisite: 201. Three hours. Staff.

283 Special Topics (3-0) Prerequisite: Consent of instructor. Three hours. Staff.

Dental Hygiene

SCHOOL OF ALLIED HEALTH SCIENCES
Assistant Professor Hill (Chairperson); Associate Professors Faigel, Farnham; Assistant Professors Brown, Ingalls, Levi, Wootton; Instructors Belfiglio, Bellhouse, Bowen, Fersing, Grundler, Josselyn, Lamoray, Lawrence, Mercier, Preston, Reed, Saboski and Welsh.

1 Dental Hygiene Study of the theories and the practice of dental hygiene with emphasis on patient education and preventive procedures. Three hours. Wootton.

2 Dental Hygiene Continuation of Dental Hygiene 1 including special patient care and clinical practice of dental hygiene procedures. Two hours. Wootton.
11 Oral Tissues The study of the morphology and physiology of oral tissues both microscopically and macroscopically. The identification of individual tooth forms. Three hours. Mercier.

12 Oral Tissues The study of the functions of the oral tissues, head and neck anatomy, occlusion, mastication, comminution, and deglutition. Two hours. Prerequisite: 11. Mercier.

52 Pharmacology and Anesthesiology The reactions and uses of drugs. Anesthesia, general and local, as used in dental practice. Two hours. Hill.

53-54 Oral Pathology General pathology of the more common disease affecting the human body. Pathology of the teeth and their supporting structures. Two hours. Farnham.

61 Radiology Study, demonstration, and practice of fundamentals of intraoral radiographic technic including electrophysics; angulation of the machine; placement and complete processing of films. Two hours. Brown.

62 Dental Practice Discussion and project participation in the planning, development, and implementation of dental health education, public health dentistry, and the private practice of dentistry. Two hours. Hangorsky.

81-82 Clinical Dental Hygiene Clinical practice with patients from simple to more difficult cases both children and adults. Field practice at local dental clinics, hospitals, and private institutions. Four hours. Prerequisites: 1 and 2.

91 Dental Materials Study of the materials used routinely in dental practice. One hour. Fersing, Lamoray.

Economics

COLLEGE OF ARTS AND SCIENCES

Professors Alnasrawi, Campagna (Chairman), Dellin and Nadworny; Associate Professor Chase; Assistant Professors Bates, Fritz and Stoler; Lecturer Rosenberg; Adjunct Associate Professor Francisco.

12 Principles of Economics The analysis of individual economic units and the national economy using traditional methods. For majors and others interested in a more thorough understanding of economic analysis. Prerequisite: 11. Three hours. Staff.

103 Public Finance  Revenues and expenditures of federal, state and local governments and intergovernmental relationships; the effects of expenditures and taxation upon individuals, business institutions, and the national economy. Prerequisite: 12. Three hours. Stoler.

105 International Trade and Finance Theories of international values, adjustment of international balances, foreign exchange, international aspects of money and banking, and tariffs. Prerequisite: 12. Three hours. Rosenberg.

130, 131 Quantitative Methods for Economists Topics to include maximum and minimum criteria with application to optimization problems in economics; static, comparative static, and dynamic models; matrix methods in economics; research design, data organization and presentation; analysis of central tendencies and probability; secular trend and seasonal variation of time series analysis; construction and weighting of index numbers; and measurement of linear and non-linear correlation. Prerequisite: 12. Some knowledge of calculus recommended. Three hours. Fritz.

138 Evolution of Capitalism Origins and development of capitalism; their social-economic institutions and their transference from Western Europe to North America. Prerequisite: 12. Three hours. Chase.

185 Comparative Economic Systems Major economic systems of mixed capitalist and socialist variety, their theoretical models, basic institutions and policies from a comparative point of view. Prerequisites: 11, 12 and six hours in another social science. Three hours. Dellin.

186 Microeconomic Theory Analysis of consumer demand, supply, market price under competitive conditions and monopolistic influences, and the theory of income distribution. Prerequisite: 12. Three hours. Chase.

187 Industrial Organization The structure, conduct, and performance of U. S. industry and appraisal of its economic efficiency and social impact, including governmental policies. Prerequisite: 12. Three hours. Stoler.

190 Macroeconomic Theory Keynesian and post-Keynesian theories of economic development; government policies in relation to the problems of employment, stability and growth in developed economies. Prerequisite: 12. Three hours. Campagna.

193, 194 College Honors

195, 196 Special Topics

197, 198 Readings and Research

200, 201 Economic History of the United States Economic development and the evolution of capitalism in the United States. Prerequisite: 186 or 190 or permission of the instructor. Three hours. Nadworny.

210 Income, Wealth and Welfare Analysis of the distribution of income and wealth and policies which affect them. Prerequisite: Nine hours in Economics. Three hours. Bates.

216 Economic Development Theories of economic growth applied to underdeveloped areas of the contemporary world, including the political and
social determinants of economic progress. **Prerequisite:** 12; 190 recommended. Three hours. Alnasrawi.

**217 Urban and Regional Economics** Economic analysis applied to the problems of cities, states and regions. **Prerequisite:** Nine hours in Economics. Three hours. Bates.

**234 Advanced Macroeconomic Theory** Analysis of classical, Keynesian and modern macroeconomic models; micro and macro demand for and supply of money; portfolio choice and the influence of financial intermediaries. **Prerequisites:** 101 and 190. Three hours. Campagna.

**241 Human Resources** The theory and policy, the labor sector, and human capital in an advanced economy. **Prerequisite:** 141. Three hours. Nadworny.

**242 Labor-Management Relations** Economic influences of unionization. The grievance process, arbitration and labor relations laws. **Prerequisite:** 141. Three hours. Nadworny.

**258 Problems of Communism** (same as Political Science 258) A comparative study of economic and political problems of applied communism with particular emphasis on current developments in selected Communist countries. **Prerequisite:** Twelve hours in history and/or social sciences. Three hours. Dellin.

**267 Econometrics** A combination of economic theory, mathematics, and statistics for the testing of economic hypotheses and developing economic models. **Prerequisites:** 131, 186, 190, and 130 recommended. Three hours. Fritz.

**290 The Soviet and Eastern European Economies** Analysis of the economic development, structure, performance and direction of the Soviet and related economies. **Prerequisite:** Nine hours in economics or permission of the instructor. Three hours. Dellin.

**295 Development of Economic Thought** Development of economic ideas. The Pre-Classical, Classical, Socialist, Neo-Classical, Keynesian Schools and individual theoreticians. **Prerequisites:** 186 and 190 or concurrent enrollment. Three hours. Chase, Dellin.

**296 Seminar and Special Topics**

**297 Readings and Research**

**299 Departmental Honors**

**Education**

**COLLEGE OF EDUCATION AND SOCIAL SERVICES**

*Any information concerning course instructor may be obtained from department chairman in the beginning of each semester.*

Professors Boller, Carlson, Corrigan, Ducharme, Fishell, Fox, Gobin, Hunt, Leggett, McKenzie, Nash, Peterson, Petrusich, Phillips, Rippa; Associate Professors Abruscato, Age, Burrell, Christensen, Clements, Conrad, Erb, Hanley, Hillman, Lang, Larson, Meyers, Nichols, Rathbone, Saurman, Shimam, Stocker, Thompson, Whittlesey; Assistant Professors Bright, Chase, Cheney,

EDSS — Education — General

1 Schooling, Learning and Society An introduction to issues and problems in American education: schools and learning, professional careers, individuals in systems, characteristics of learners. Required readings and papers. Non-CESS students only. Three credits.

2 Foundations of Education Social foundations of education: development of American education; education as a profession. Three hours. I or II.

55 Special Topics Designed so that its content and structure may accommodate special issues in education not especially appropriate within the boundaries of an existing course. Two to six hours.

62 Life Planning An introduction to self, career, and academic resource awareness geared to students who want to assess their own values systems, decision making processes and life goals. Three hours.

142 Audio-Visual Materials and Methods Designed to increase teacher capabilities in the use of instructional media and in the integration of media into the classroom and curriculum. Emphasis will be given to technology as it relates to individualizing instruction and to meeting the needs of learners in various kinds of groups. Activities will be directed to preparation of materials and the collation of sources of media used in elementary education. Laboratory time will be provided in the course structure. Three hours.

143, 144 Studies in behavior with emphasis in cognitive, emotional, and psychological development. Examination of views of learning styles and developmental processes. Non-CESS only. Three hours.

145, 146 Learning and Human Development The developing individual; psychology of learning with particular application to human development; measurement and evaluation of learning and development; opportunities for related field experiences. Three hours.

147, 148 Learning, Personality, and Change Understanding of major psychological models of man and theories of learning. Integration of the theory and practice of particular systems of human development and human learning. Analysis of selected social problems and institutional settings. Problems related to educational/social service institutions, with the focus on the role of the helping professions in the learning and change process. (Nine credits: Six in Fall Semester: Three in Spring Semester).

190 Approaches to Education Senior Interdisciplinary Seminar A study of ideas and values, historic and contemporary, with emphasis upon the ideological bases of American education. Drawing from theory and research in the humanities and social sciences, this course helps the student to develop new perspectives as a guide toward resolving some of the crucial issues of our time. Prerequisite: Senior standing. Three hours.

197 Readings and Research Individual research problem or directed
reading in an area of special interest to the student. Prerequisite: Permission of the instructor. Variable credit, one to four hours per semester. Course may be repeated for a maximum of eight hours credit.

198 Personal Component The personal component offers students an opportunity to pursue an activity under self-direction. Each student is required to state the objectives for his study and make a contractual arrangement with his personal component advisor to fulfill the terms of the contract. Each contract holds one credit. Options such as education colloquia, community action experience, seminars and discussion groups, individual counseling, group counseling, and others will be provided during the four years. The course may be repeated for a maximum of seven hours credit. Only open to UVM students enrolled in Teacher Education and Social Welfare Programs.

202 Philosophy of Education Educational theory and philosophy past and present; contributions of leading educational philosophers; the interrelations of education, society, and philosophy. Prerequisite: Twelve hours in education and related areas. Three hours.

204 Seminar in Educational History: The Struggle for Equality of Opportunity A study of selected topics in the history of education from the "Golden Age" of Greece to the present. Special attention to the nature of education in democratic and authoritarian social orders. Discussions and research will revolve around such topics as the education of women, the plight of American Indians, and the quest of the black people throughout the world for equality and freedom. Prerequisite: Twelve hours in education and related areas, or permission of instructor. Three hours.

205 History of American Education History of principles and practices in American education as they relate to social, economic, political, and cultural developments. Discussions will focus on key ideas of historic and contemporary significance. Prerequisite: Twelve hours in education and related areas, or permission of instructor. Three hours.

206 Comparative Education An examination of educational policies and practices in selected countries throughout the world. Special attention will be paid to those topics that relate to important issues in American education. Prerequisite: Twelve hours in education and related areas. Three hours.

211 Educational Measurements The essential principles of measurement in education. Topics include measures of achievement, analysis of standard tests, construction of objective tests and inventories. Prerequisite: Twelve hours in education and related areas. Three hours.

212 Child and Adolescent Psychology An examination of children and adults as emerging individuals and the impact of socio-cultural ethics, values and institutions on that individual. A variety of themes will be explored including human needs, values, self concept, personal freedom, bureaucratic society, cross cultural issues; as relative to children and youth. Prerequisite: Twelve hours in education and/or related areas. Three hours.

248 Educational Media Modern instructional aids, theory and practice, educational media related to psychology of teaching and learning. Prerequisite: Twelve hours in education and related areas. Three hours.

252 Seminar in Aesthetic Education A critical examination of aesthetic values transmitted in contemporary schools. Consideration of ways to expand aesthetic awareness among children, youth and adults. The aesthetic
quality of natural and man-made environments with implications for present and future educational practice will be given special attention. **Prerequisite:** Twelve hours in education and related areas. Three hours.

**254 Anthropology of Education** Introductory examination of theories and research of cultural anthropology and education. An anthropological perspective on education grounded in the cultural realities of life in the American school. Study of the interrelationship of culture and man — his educational values, beliefs, and practices. **Prerequisite:** Twelve hours in education and related areas. Three hours.

**255 The School as a Social Institution** Professional role of the modern educator and the values underlying educational policy will focus on such contemporary issues as political pressures on public schools, problems of integration, place of religion in education, and impact of the culturally different child on school and community. **Prerequisite:** Twelve hours in education and related areas. Three hours.

**292 Issues in Contemporary Education** Designed so that its content and structure may accommodate special issues in education not especially appropriate within the boundaries of an existing course. **Prerequisite:** Twelve hours in Education and related areas. Two to six hours.

**295, 296, 297, 298 Laboratory Experience in Education** Supervised field work designed to give students experience in specialized areas for their professional development. **Prerequisite:** Permission of the Coordinator of Professional Laboratory Experiences. Credit as arranged.

**EDEL — Education — Elementary**

**3, 4 Child and Community** Supervised experiences with children's groups in the community. Students should plan a schedule which will enable them to have blocks of time, such as a morning or afternoon, free of regular classes. **Prerequisite:** Sophomore standing. One hour.

**121 Reading and Language Arts** Principles underlying teaching reading; materials of instruction; reading readiness; vocabulary development; development of correct study skills; reading in the Language Arts program; observation in elementary school. Three hours.

**122 Developmental Reading** Consideration of current practices and controversial issues relative to teaching reading. Study of recent innovations, methods, materials, as well as the organization and evaluation of various reading programs. **Prerequisite:** For Elementary Education Majors, 121; all others consent of Director of Reading Center. Three hours.

**134 Children's Literature and Language Arts** Traditional and modern children's literature in prose and poetry; appreciation and evaluation of literature for children of all age levels; techniques of story telling; literature in the Language Arts program. Three hours.

**144 Teaching Science and Social Studies** Teaching methods, curriculum planning in social studies and science for the primary through middle school. A variety of nationally developed curriculum projects will be examined and micro-taught; AAAS Science: A Process Approach, Elementary Science Study, Science Curriculum Improvement Study, Conceptually Oriented Program in Elementary Science, Environmental Studies, Taba Social Studies, Man:
A Course of Study. A wide variety of instructional activities and strategies will be considered. Three hours.

160 Teaching Mathematics and Critical Thinking in the Elementary School An investigation of the modern approach to mathematics with emphasis on instructional strategies, curriculum resources, and problem solving. Students will construct learning aids, develop individualized learning units, and have opportunity to use various manipulative devices. Three hours.

181 Student Teaching See course description under Secondary Education.

222 Improvement of Reading Instruction in the Elementary School Analysis of philosophies, programs and instructional practices for teaching reading in the elementary school. Examination and evaluation of basal textbook, individual and specialized reading programs. Prerequisite: Twelve hours in education and/or related areas including an introductory course in reading, or consent of instructor. Three hours.

234 Literature and Language for Children and Youth Characteristics, interests, and reading habits of children and young people; criteria for selection and evaluation of literature; organizing book units for teaching literature and for content areas; books for children and youth. Prerequisite: Twelve hours in education and related areas or consent of instructor. Three hours.

242 Modern Trends in Elementary Education Study of modern educational principles and practices in today's elementary schools. Emphasis will be on communication in the classroom, interaction between students and teachers, materials and emerging trends as they affect the elementary school. The course will deal with different teaching modes that may assist in the development of more critical analysis of the teaching act. Prerequisite: Twelve hours in education and related areas. Three hours.

275 Introduction to Analysis of Reading and Related Difficulties Analysis and evaluation of learning difficulties with emphasis on reading and writing; nature of difficulties; procedures and materials for assessing reading performance. Involvement with children is required. Prerequisites: Six hours in reading and three hours in Education or permission of instructor. Three hours.

276 Introduction to Laboratory Experiences in Reading and Related Language Instruction Approaches to be used for the prevention and correction of reading and written language difficulties. Supervised teaching of individuals and/or small groups experiencing reading and language problems. Apprenticeships in reading instructional programs. Prerequisite: Introduction to Analysis of Reading and Related Language Difficulties. Three to six hours.

292 Issues in Contemporary Education Designed so that its content and structure may accommodate special issues in education not especially appropriate within the boundaries of an existing course. Prerequisite: Twelve hours in Education and related areas. Two to six hours.

EDSC — Education — Secondary

15 Participation A minimum of thirty clock hours of observation and participation in classroom work in a formal learning environment. Weekly seminars on campus. Students should plan a schedule which will enable them to have blocks of time, such as morning or afternoon, free or regular classes.
**Prerequisites:** Sophomore standing and acceptance by the Coordinator of Professional Laboratory Experiences. Two hours.

178 **Secondary Methods and Procedures** This course is designed to prepare students for teaching in the secondary school. Experiences such as micro-teaching, role playing, classroom simulation, analysis of classroom behavior, and preparation of individualized materials are integral portions of the course. **Prerequisites:** Satisfactory completion of Ed. 145 & 146, Senior standing, and acceptance in a teacher education program. Three hours

179 **Secondary Methods and Procedures in Special Subject Areas** (Latin, mathematics, romance languages, and social studies.) **Prerequisites:** Prior or simultaneous enrollment in Ed. 178 and acceptance in a teacher education program. Variable credit, two or three hours, i.e. Latin three hours, mathematics three hours, romance language three hours and social studies three hours. (English majors enroll in Ed. Eng. 182 and Speech majors in Ed. Speech 294. Speech minors are encouraged to enroll in 294.)

181 **Student Teaching** Teaching in the elementary or secondary schools under the guidance of cooperating teachers, principals, and college supervisors. For most undergraduates this is a full-time, 16 weeks, 12 credit experience during a semester. **Prerequisites:** Acceptance in a teacher education program, and acceptance by the Coordinator of Professional Laboratory Experiences. Variable credit, three to twelve hours.

182 **Seminar for Prospective Teachers of English** (see page 208 English 182).

217 **Secondary School Curriculum** Principles and problems in curriculum development. An analysis of recent curricular innovations in American secondary schools. **Prerequisite:** Twelve hours of education and related areas. Three hours.

223 **Reading Programs in Secondary Schools and Colleges** Relationship of reading to learning; study of organization, instructional procedures, and materials for developing reading improvement programs for secondary and college students; reading in content areas. **Prerequisite:** Twelve hours in education and/or related areas or consent of instructor. Three hours.

294 **Seminar for Prospective Teachers of Communications** (see page 169 C & T 294.)

295, 296, 297, 298 **Laboratory Experience in Education** Supervised field work designed to give students experience in specialized areas for their professional development. **Prerequisite:** Permission of the Coordinator of Professional Laboratory Experiences. Credit as arranged.

EDAR — Art Education

140 **Foundation Studio for Elementary Education Majors** Students enrolled in this course are to select a foundation studio course (Art 2, 3, or 4) from those sections designated each semester on the course schedule. See course descriptions listed under Art in College of Arts and Sciences. Three hours.

141 **Practicum in Field Experience** Student will work as a teaching assistant to a faculty member in foundation, studio, advanced studio, art history, or museology depending on his/her interest and capabilities. **Prerequisites:** Senior standing and permission. Four hours.
177 Curriculum and Practice in Elementary Art  The study and implementation of curriculum in the elementary school. Student will work directly in an elementary classroom. Lectures and discussions. Prerequisites: Eighteen hours studio art, junior standing. Four hours.

183 Seminar: Current Issues in Art and Education  Research and discussion of issues relevant to contemporary art and the teaching of art. Prerequisite: Senior standing or permission plus twelve hours in art and/or related areas. Three hours.

184 Special Problems in Art Education  Independent study in related field works, research, or combination. Prerequisites: Junior standing and permission of instructor. One to six hours.

292 Issues in Contemporary Education  Designed so that its content and structure may accommodate special issues in education not especially appropriate within the boundaries of an existing course. Prerequisite: Twelve hours in Education and related areas. Two to six hours.

EDMU — Music Education

The Music Department offers a number of pedagogy courses in specific musical areas. All are open to non-majors by permission of the instructor. See Music listings under the College of Arts and Science.

111 Music for Elementary Teachers  The development of musical skills, understandings, and attitudes pertinent to the teaching of music in the elementary classroom. Prerequisite: Sophomore standing. Three hours.

112 Elementary Music Methods  A course to aid the elementary classroom teacher in developing the potential musicality of students to the highest level through the practical application of musical skills and understandings already acquired by the teacher. Prerequisite: 111 or music major, or instructor’s permission. Three hours.

131 Music Methods  Methods and materials in the teaching of vocal and instrumental music in elementary and secondary schools. Prerequisites: 145, 146 and Senior standing in music education. Five hours.

295, 296, 297, 298 Laboratory Experience in Education  Supervised field work designed to give students experience in specialized areas for their professional development. Prerequisite: Permission of the Coordinator of Professional Laboratory Experiences. Credit arranged.

EDSP — Special Education

1 The Behavioral Model of Education  An introduction to the behavioral model of education. Includes an introduction to behavioral principles, observation and measurement and the implementation of a teaching/learning procedure. Students carry out a daily practica with an eligible learner. Prerequisite: None. Three hours.

58 Introduction to Exceptional Individuals  Overview of the causes, behaviors and educational programs of those who have psychological and educational needs that are different from those of the general population. Prerequisite: Permission of Responsive Teacher Program Coordinator. Three hours. Trinity College.

100 Specifying Minimum Objectives for Basic Skills  An intro-
duction to the concept of minimum instructional objectives and their use for developing language, arithmetic and social interaction curricula. Observation of selected public school classrooms using basic skills minimum objectives is required of each student. **Prerequisite:** Acceptance into the Responsive Teacher Program. Three hours.

150 **Classroom Management Procedures** A survey of researched procedures for managing children eligible for special education services within regular and special classrooms, and home and institutional environments. Students will develop, apply and evaluate specific procedures in simulated and classroom environments. **Prerequisites:** Acceptance into the Responsive Teacher Program and concurrent registration in Special Education 160: Responsive Teacher Practicum. Three hours.

155 **Measurement and Implementation of Minimum Objectives for Basic Skills** The specification and implementation of a measurement system to assess pupil progress in language, arithmetic and social interaction curricula. Practicum applications of the measurement system will be required for at least one child eligible for special education services in a regular or special classroom. **Prerequisites:** Acceptance into the Responsive Teacher Program and concurrent registration in Special Education 160: Responsive Teacher Practicum. Three hours.

160 **Responsive Teacher Practicum** A practicum to be conducted within a public school, or public or private institution designed to provide opportunities for Responsive Teacher Program students to apply the behavioral model of education to serve children eligible for special education services. The practicum will require a minimum of two hours daily within a selected learning environment in addition to travel time to and from the off-campus facility. **Prerequisites:** Acceptance into the Responsive Teacher Program and concurrent registration in Special Education 150 and Special Education 155. Six hours.

165 **Seminar in Special Education** Students will develop personal vitae and materials describing their experiences and achievements during their college career. Interviews with school administrators, classroom teachers and peers will provide opportunities for students to survey positions and careers in special education. **Prerequisites:** Acceptance into Responsive Teacher Program and permission of the instructor. Seniors. One hour.

181 **Responsive Teacher Internship** Teaching in the elementary or secondary schools under the guidance of cooperating teachers, principals, and college supervisors. For most undergraduates this is a full-time, 16 week, 12 credit experience during the fall semester. **Prerequisites:** Acceptance into Responsive Teacher Program and permission of instructor. Twelve hours.

197 **Readings and Research in Special Education** Individual research problem or direct reading in an area of special interest to the student. **Prerequisite:** Permission of the instructor. Variable Credit: One to four hours per semester. Course may be repeated for a maximum of eight hours credit.

224 **Introduction to Behavioral Principles of Education** This course will involve an analysis of specific teachers and children's behavior in the classroom setting that function to either facilitate or impede the attainment of educational goals. Emphasis will be on the application of basic behavioral principles in the regular class setting that will improve student's academic and social behaviors. **Prerequisites:** Twelve hours in education and related areas and permission of the instructor. Juniors and Seniors. Three hours.
292 Issues in Contemporary Education  Designed so that its content and structure may accommodate special issues in education not especially appropriate within the boundaries of an existing course. **Prerequisite:** Twelve hours in education and related areas. Two to six hours.

295, 296, 297, 298 Laboratory Experience in Education  Supervised field work designed to give students experience in specialized areas for their professional development. **Prerequisite:** Permission of the Coordinator of Professional Laboratory Experiences. Credit arranged.

EDOH — Education — Organizational and Human Development

185 Future Cognition  A survivable future will require the development of expanded cognitive and affective abilities, consensus on values, and new behaviors and skills. Alternative futures will be examined to determine the implications for these abilities and implications for current educational processes. Students will develop scenarios of alternative future. Three hours.

220 Personality Development  Approaches to understanding human behavior in applied settings. With emphasis on behavior development as an inter-personal process. **Prerequisites:** Twelve hours in education and psychology. Three hours.

EDOH — Education — Organizational and Human Development

292 Issues in Contemporary Education  Designed so that its content and structure may accommodate special issues in education not especially appropriate within the boundaries of an existing course. **Prerequisite:** Twelve hours in Education and related areas. Two to six hours.

295, 296, 297, 298 Laboratory Experience in Education  Supervised field work designed to give students experience in specialized areas for their professional development. **Prerequisite:** Permission of the Coordinator of Professional Laboratory Experiences. Credit as arranged.

SOSE — Social Work and Social Services

2 Foundations of Social Work  An introductory course in Social Work to develop an understanding of existing social service delivery systems and their history. Three hours.

15 Participation (optional)  Designed so that its content and structure may accommodate special issues in social work not especially appropriate within the boundaries of an existing course. Three hours.

51 Human Needs & Social Services  Study of problems of social functioning and social services to meet such problems. Independent study on recommendation of faculty. Three hours.

166 Social Welfare as a Social Institution  Philosophy, purpose, history of social welfare; review of fields and processes of social work. **Prerequisites:** Sociology 10, Psychology 1, Economics 3, Political Science 21. Three hours.

167 Racism and Contemporary Issues  Study of perception, conceptualization and comprehension of racism. Strategies, techniques and procedures to deal and combat many facets of racism. Three hours.

168, 169 Social Work as a Profession  Means of intervention or methods employed by social workers in providing services on individual, group and community levels. **Prerequisites:** 166, 167. Three hours.
170 Field Experience  Field experience under supervision will be given in social agencies four and one-half days each week. Weekly seminar. Prerequisites: 168, 169; majors, Senior standing. Fifteen hours.

291 Social Research Methods  Introduction to social research skills for social workers. Three hours.

292 Applied Social Research  Application of research skills and social work practice. Three hours.

EDPE — Physical Education Professional

21 Foundations of Physical Education  Review of Historical, Philosophical and Scientific Foundations as a basis for physical education and an introduction to the scope and rule of school physical education and to the opportunities and obligations associated with physical education as a profession. Three hours.

22 First Aid and Safety  Course is designed to prepare the general public with the first aid knowledge and skills necessary to care for most injuries and to meet most emergencies. Content includes treatment for wounds, burns, shock, broken bones, drugs, poisoning, sudden illness, as well as techniques for bandaging, artificial respiration, and transportation. The course also provides accident prevention information. Red Cross certification for successful performance in Standard First Aid and Personal Safety, Basic First Aid, and Multi-media First Aid. One hour, half semester.

23 Advanced First Aid and Emergency Care  Advanced first aid and emergency care is primarily designed to meet the needs of individuals who are in a position to provide first aid and emergency care frequently. Course content includes Standard First Aid and Personal Safety skills in addition to cardiopulmonary resuscitation, emergency childbirth, extrication, and water accidents. Red Cross certification for successful performance in Advanced First Aid and Emergency Care. Prerequisite: Permission of instructor. Two hours.

26 Water Safety  Advance performance skills in swimming, diving, survival and rescue techniques. Theory and practice in the techniques of teaching aquatic skills. Red Cross certification as Water Safety Instructor or Instructor for Beginning Swimming. Prerequisite: Current Red Cross Lifesaving Certificate. Two hours.

30 Career Planning in H.P.E.R.  Study of alternatives, issues and skills related to career options for students majoring in health, physical education and recreation. Special emphasis on factors pertaining to the preparation, locating, and application for employment. Topics include alternatives for student teaching, post-graduate study, locating vacancies, application for the job, getting started on the job, and common issues requiring decisions. One and one-half hours, half semester.

100 Teaching Physical Education in the Elementary School  Planning, organization and practice in skills appropriate for teaching movement patterns to children aged 4-12. Two hours. Elementary Education majors only.

104, 105 Physical Education Teaching Experience (Petex)  An experience based course sequence emphasizing the relationship of motor development to learning. Includes age level needs and appropriate physical education activity sequences. Screening and response to perceptual mechanisms
and implications for teaching motor skills. The first semester focuses on grades K-3. The second semester (105) studies the needs and programs appropriate for youngsters in grades 4-6. Five hours.

116 **Health Education**  Concepts of personal health related to problems of daily living. Areas of concern include mental health, sex education, nutrition and weight control, fatigue and relaxation, chronic and communicable disease, stimulants and depressants. Three hours.

122 **Coaching Women's Basketball and Softball**  Classroom and laboratory experiences designed for coaching women's basketball and softball. Includes theory and technique in coaching in each sport, as well as care and purchase of equipment, conditioning, team selection, scheduling, planning for practices, defensive and offensive strategies, etc. **Prerequisite:** Skill competency in basketball and softball or permission of instructor. Three hours.

123 **Coaching Baseball and Football**  Theory and technique of coaching interscholastic baseball and football. Includes practice, game and schedule organizations. **Prerequisites:** Skill competency in baseball and football, and Junior standing. Three hours.

124 **Coaching Track and Wrestling**  Analysis and practice of the skills, technique and knowledge involved in coaching interscholastic track and wrestling. **Prerequisites:** Skill competency in track and wrestling and Junior standing. Three hours.

125 **Coaching Soccer and Basketball**  Theory and technique of coaching interscholastic soccer and basketball. Includes practice game and schedule organization. **Prerequisites:** Skill competency in soccer and basketball, and Junior standing. Three hours.

126 **Coaching Gymnastics and Aquatics**  Analysis and practice of skills, techniques and knowledge involved in teaching and coaching gymnastics and aquatics. **Prerequisites:** Skill competency in gymnastics and aquatics, and Junior standing. Three hours.

140 **Seminar in Physical Education**  Strategy, analysis, techniques and contemporary issues in selected areas of physical education. Variable credit based upon the nature of the semester topic selection. One-three credits.

145 **Seminar in Athletics**  Contemporary issues, strategy, analysis and problem areas related to selected comparative sports. Variable credit. One-three credits.

150 **Seminar in Health Education**  In-depth content, methods, materials and units of instruction for selected areas of health education. Special emphasis upon current health problems. Variable credit, one-three.

154 **History, Philosophy and Trends in Recreation**  An in-depth review of the chronological history of the evolution of recreation and leisure and the development of the park and recreation movement; an examination of past and emerging theories and philosophies of recreation and leisure; an exploration of trends in recreation and leisure and its probable impact on our life styles. Three hours.

155 **Physical Education in the Secondary School**  Theories of teaching which include unit plan development, classification and grouping of students for instruction, and a variety of teaching methods including the use of
a problem solving approach to learning. Laboratory experience in teaching activity skills to youths from age of 12-18 years. Prerequisite: Junior standing. Three credits.

156 Curriculum Design in Health and Physical Education The role of health education and physical education in the comprehensive school curriculum. Philosophy and techniques of curriculum innovation. Emphasis upon inter-relationships that exist between student needs and interests, teaching methodology, evaluative procedures, community involvement and administrative organizational patterns. Prerequisite: 104, 105, or 155. Three hours.

157 Care and Prevention of Athletic Injuries Prevention, recognition and care of injuries related to school physical education and athletic programs. Two hours.

158 Organization and Administration of Physical Education Organization and administration of instructional programs, intramurals, interscholastic athletics, school recreational programs, schedules, personnel, budgets, equipment, records, tests, and public relations. Three hours.

166 Kinesiology Study of joint articulation, muscular action, and basic principles of body mechanics as a foundation for the analysis of motor performance in physical education activities, athletics, and physical therapy. Prerequisite: One year Biol. Sci. Three hours.

167 Physiology of Muscular Activity Study of physical exercise upon the circulatory, respiratory, digestive, and nervous system. Relationship of endurance, fatigue, training and nutrition to the efficiency of physical performance. Prerequisite: One year Bio. Sci. Three hours.

168 Tests and Measurements in Physical Education Principles and techniques in evaluation of instruction in health and physical education. Emphasis is given to test selection, administration, construction, application of statistical procedures, and development and interpretation of research data. Three hours. Accelerated.

170 Physical Education for the Atypical Recognition, prevention, and correction of functional and structure deviations from normal body mechanics. Special emphasis given to the organization of programs adapted to the needs of physically, emotionally, and mentally handicapped children. Prerequisite: 104, 105, or 155. Three hours.

172 Psychology of Coaching Analysis and application of psychological sub-disciplines to coaching and athletics. Learning, motivation, transfer, retention and emotion are discussed with special implications for the coach. Personality qualities of the player and coach will be examined as they relate to success in sport. An analysis of the outside influences on the athlete as they affect the player-coach relationship. Three hours.

173 Practicum in Field Experience Individually prescribed teaching experience involving work with youth groups in activities related to Physical Education, Health, or Recreation. Responsibilities will approximate those commonly associated with student teaching. Prerequisite: 104, 105, or 155. Variable credit (2-4 hours).

182 Health Methods and Materials Fundamental methods of health teaching as applied to school and public health education. Consideration of materials applicable to health education, evaluation techniques, preparation of
teaching units and bibliographies, a survey of the literature in the field of health education. A laboratory teaching experience will be provided. Three hours.

192 Intramural Programs Organization and administration of intramural sports programs for Junior High through college levels. Philosophy, program planning, units of competition, and financing of intramural programs. Laboratory experience organization, supervision and officiating the UVM Intramural Program. Prerequisites: 22 or 157 and Junior standing. Three hours.

195 Recreation Leadership and Programming A practical approach to the significance, theories and characteristics of leadership content and methods of program planning. Field work practice in planning and leadership techniques. Three hours.

197 Reading and Research For course description see the College of Education and Social Services listing.

201 Administration of Athletic Programs Designed to provide the athletic director, school administrator, and teacher-coach with a background for effective administration of the athletic program of schools. Areas considered include scheduling, budgeting, management, equipment, policy, public relations, and educational justification. Prerequisites: Twelve hours of education and psychology. Three hours.

203 Principles of Physical Education Principles basic to sound philosophy of physical education for appraisal of historical development; relationship to health education, recreation and other areas; foundation and functions of physical education in contemporary society. Prerequisite: Junior standing. Three hours.

208 School Health Programs Organization of the total school health program. Problems and administration in the area of school environment, health services, health education, and school-community relationship. Special emphasis on health appraisal of children in grades 1 through 12. Prerequisite: 116 (Health Education) or equivalent. Three hours.

Physical Education
Two to three hours weekly. One credit.

One year of physical education is required of undergraduate students. (See page 45.) The program is centered around the physical needs, abilities and interests of young adults. The aims are to help all to improve and maintain physical fitness; to provide opportunity to establish skills in a variety of movement activities; to bring performance in elected physical activities to a high level of satisfying proficiency; to find enjoyment in physical activity and lasting interest in continuing voluntary participation. Classes are co-educational unless indicated for men or women only.

ACTIVITIES

| Archery | Golf | Social Dance |
| Badminton | Gymnastics | Softball |
| Basketball | Handball | Square Dance |
| Conditioning | Ice Hockey | Squash |
| Cross Country Skiing | Judging Women’s Gym | Swimming |
| Diving | Lacrosse | Tennis |
| Fencing | Modern Dance | Track and Field |
| Field Hockey | Officiating Basketball | Trampoline |
Field Hockey Officiating  Ski Instructors  Umpiring Softball
Flag Football  Skin and Scuba Diving  Volleyball
Folk Dance  Soccer-Speedball  Wrestling

The following activities require special fees for transportation and/or instruction. The student must also provide special attire and/or equipment in skiing, ice skating, and karate:

Ballet  Horseback Riding  Paddle Tennis
Bowling  Ice Skating  Sailing
Downhill Skiing  Karate

The following activities, co-offered by the Physical Education and ROTC Departments, may be counted toward the physical education requirement:

Back Packing  Orienteering  Survival
Marksmanship  Rappelling  Physical Training (by special permission of ROTC)

Activities are offered at various levels of instruction and numbered as follows:

Level 1. Beginner, very first experience with an activity.
Level 2. Beginning mastery of basic skills and knowledges, equivalent to 7 weeks of previous instruction.
Level 3. Intermediate; equivalent of 14 weeks of instruction.
Level 4. Intermediate-Advanced; introduction to more complex skills and strategy.
Level 5. Advanced.

OTHER COURSES IN EDUCATION

In addition to the courses previously described, the following courses are also offered, usually in the Summer Session and Evening Division.

Engineering

COLLEGE OF ENGINEERING, MATHEMATICS AND BUSINESS ADMINISTRATION

1 Engineering Design Concepts I (1-3) Introduces the student to the various engineering disciplines by lectures and case studies, and to engineering design by direct student involvement in engineering problem-solving. The relationship of engineering to contemporary societal needs is strongly stressed. Open to all students. Three hours.

2 Engineering Design Concepts II (1-3) Emphasis is placed on participation in design projects, and on the skills of oral and written presentation. Sketching and engineering drawing are introduced. Two hours.

Engineering Science

COLLEGE OF ENGINEERING, MATHEMATICS AND BUSINESS ADMINISTRATION

110 Thermodynamics and Heat Transfer (4-0) Principles of en-
gineering thermodynamics; application of these principles to thermodynamic cycles; introduction to heat transfer. Prerequisites: Physics 24, Math 22. Four hours. Martinek.

121 Fluid Mechanics (4-0) Dynamics of an ideal fluid; energy and momentum relationships; similitude; flow in conduits; boundary layer mechanics; compressibility phenomena; wing theory; hydrodynamic lubrication; fluid machines and controls. Prerequisites: 110 or ME 111, ME 133. Four hours. Duchacek.

122 Heat and Mass Transfer (4-0) Principles of heat transfer; conduction, convection, radiation; steady and unsteady state; the electric analogy; diffusion and mass transfer; applications to heat and mass transfer problems. Prerequisites: 110 or ME 111, Math 271. Four hours. Duchacek.

131 Materials I (3-0) Elastic and plastic behavior of materials; normal and shear stresses; strains due to torsion and bending. Electronic, atomic, and crystal structures; imperfections; phases in solids; non-equilibrium transformations; polymer structures; corrosion; failure mechanisms. Prerequisites: Physics 25, ME 133. Three hours. Outwater.

141 Systems Control (3-0) Dynamics of systems with mechanical, fluid, thermal, and electrical elements. Theory of feedback control. Methods for analysis and design of control systems. Prerequisites: 110 or ME 111, ME 133, Math 271. Three hours. Hundal.

---

Engineering, Civil

COLLEGE OF ENGINEERING, MATHEMATICS AND BUSINESS ADMINISTRATION

Professors Cassell, Dawson, and Oppenlander (Chairman); Associate Professors Downer and Fay; Assistant Professors Hemenway, Laible, and Olson; Lecturer Dunham; Adjunct Professor Knight; Professor Emeritus Milbank.

01 Statics (3-0) Fundamentals of statics; composition and resolution of forces; the analysis of force systems in two and three dimensions; and centroids and moments of inertia. Prerequisite: Mathematics 22. Three hours. Staff.

02 Dynamics (3-0) Fundamentals of kinematics covering rectilinear and curvilinear motion, relative motion. Coriolis acceleration, translation, rotation, and plane motion; fundamentals of kinetics covering translation, rotation, and plane motion of particles and rigid bodies; work, energy, power; impulse and momentum; and simple harmonic motion. Prerequisite: 01. Three hours. Staff.

10 Surveying (3-4) Fundamental surveying methods; propagation of errors as applied to surveying measurements; triangulation; control surveys; and traverse adjustments. Prerequisite: Mathematics 21. Four hours. Staff.

11 Geometronics (2-4) Selected items in analytical photogrammetry; celestial observations, elements of photo-interpretation; theory of curves; and digital terrain analysis. Prerequisites: 10 or 12 and Mathematics 22. Three hours. Staff.

12 Plane Surveying (3-4) Fundamental surveying methods; elements of topographic surveying; and special problems according to student interest.
For those not enrolled in civil engineering. **Prerequisites:** Mathematics 2 and 9. Four hours. Staff.

**100 Mechanics of Materials I (3-0)** The elastic and plastic behavior of materials; normal and shearing stresses from axial, torsional, and flexural loading combinations; deflections due to torsion and bending; applications to statically indeterminate members; analysis of plane stress and strain; failure theories and design criteria. **Prerequisite:** 01. Three hours. Staff.

**101 Mechanics of Materials Laboratory (0-3)** Experimental stress analysis methods; fundamental properties of metals, plastics, and wood; and the effects of size, shape, method and speed of loading, and strain history on these properties. **Prerequisite:** 100. One hour. Staff.

**140 Transportation Planning and Economics (3-0)** Analysis of transportation systems; technological characteristics; the transportation planning process; techniques of travel modeling and forecasting; user-, facility-, and equipment-cost considerations; economic analysis; fiscal studies; and administration of transportation systems. **Prerequisite:** 10. Three hours. Dawson, Oppenlander.

**141 Traffic Operations and Geometric Design (3-0)** Basic characteristics of vehicular and pedestrian traffic; highway and intersection capacity; techniques for measurement and analysis of traffic characteristics; design and application of traffic controls; geometric design of rural and urban facilities. **Prerequisite:** 140. Three hours. Dawson, Oppenlander.

**142 Structural Roadway Design (2-1)** Properties of construction materials for roadways; design of aggregate, asphalt and concrete mixes; analyses of pavement performance; structural design of flexible and rigid pavements; highway earthwork; highway drainage; construction techniques. **Prerequisite:** 141. Three hours. Dawson, Oppenlander.

**150 Environmental Engineering (3-0)** Basic environmental engineering concepts: water supply, water and air pollution control, solid wastes. Emphasis on basic phenomena. **Prerequisites:** Chemistry 5 and Math 21. Spring. Three hours. Hemenway.

**151 Water and Wastewater Engineering (2-3)** Functional design of water supply systems and wastewater management facilities; population projections, estimation of water and waste quantities, sewers, distribution systems, treatment facilities; governmental regulations. **Prerequisites:** 150. Fall. Three hours. Cassell.

**155 Quantitative Analysis for Environmental Engineers (2-3)** Chemistry and microbiology of water quality management; diffusion, equilibria, reaction kinetics, acids and bases, colloids, enzymes, bacterial physiology, pollution indicator organisms; laboratories demonstrate standard techniques. **Prerequisites:** Chemistry 4 and Math 22. Fall. Three hours. Cassell, Hemenway.

**160 Hydraulics (3-3)** Mechanics of fluids with emphasis on incompressible fluids; flow meters; flow in closed conduits and open channels; elements of hydraulic machinery; laboratory studies of flow in closed conduits and open channels; and experiments with hydraulic machinery. **Prerequisite:** 02. Four hours. Downer.

**161 Fundamentals of Fluid Mechanics (3-0)** An introduction to the statics and dynamics of fluids. One-third to one-half of the semester will be
spent on acquiring the necessary level of competence in mathematics, statics, and dynamics. **Prerequisites:** One year of college calculus and one year of related science. Three hours. Staff.

162 **Applied Fluid Mechanics** (3-3) The application of basic principles of fluid mechanics to practical problems; flow in closed conduits and open channels; and hydraulic structures and machinery. **Prerequisite:** 161. Four hours. Staff.

163 **Principles of Hydrology** (3-0) A systematic analysis of the distribution and movement of water in the environment; detailed discussion in nonmathematical terms of the occurrence, distribution, and movement of water through the main phases of the hydrologic cycle; precipitation, interception, evaporation, soil moisture, groundwater, and runoff; and methods of measurement of a wide range of the hydrologic parameters. **Prerequisites:** Junior standing and one year of college science. Three hours. Downer.

170 **Structural Analysis I** (3-3) Analysis and design of statically determinate structures; consideration of function, expected loads, reactions, material choice, and layout of members; influence lines; criteria for positioning moving loads; design of steel and timber members under combined bending and axial loads; base plates; eccentric connections; and laboratory practice in graphic statics and design computations. **Prerequisite:** 100. Four hours. Laible.

171 **Structural Analysis II** (3-0) Analysis of statically indeterminate structures by consistent deformation, least work, slope deflection, and moment distribution; determinations of deflections by virtual work, moment area, conjugate beam, and Williot-Mohr diagram; continuous structures; and an introduction to structural dynamics. **Prerequisite:** 170. Three hours. Laible.

172 **Advanced Structural Design** (3-3) Advanced theory and design of structures with emphasis on continuous frames and trusses; consideration of wind stress analysis, space frames, moment connections, and camber diagrams; comparative studies of specifications for design in steel and aluminum; and laboratory problems in design of steel building frames and continuous girder and truss bridges. **Co-requisite:** 171. Four hours. Dunham.

173 **Reinforced Concrete** (3-0) Analysis of stresses in plain and reinforced concrete members; design of reinforced concrete structures; and theory of prestressed concrete. **Prerequisite:** 171 or concurrent enrollment. Three hours. Dunham.

180 **Soil Mechanics** (3-3) Identification, description, and physical properties of soils and other particulate systems; subsurface exploration; and engineering characteristics of natural deposits; consideration of stress distribution, permeability, consolidation, shear strength, and stability of soils; and laboratory practice in testing for index properties, permeability, consolidation, shear, and the effects of additives and cementing agents on particular systems. **Prerequisite:** 100. Four hours. Olson.

181 **Substructure Analysis and Design** (3-3) Evaluation of subsoil conditions and earth pressures; and design of retaining walls, substructures for buildings and bridges, and cofferdams. **Prerequisites:** 173 and 180. Four hours. Olson.

190 **Special Projects** (3-0) Independent investigation of a special topic under the guidance of a faculty member. The course work may consist of library investigations, unique design problems, and laboratory and field studies. Prepa-
ration of a formal report on the problem is required. Prerequisites: Senior standing and departmental permission. Three hours. Staff.

191, 192, 193 Intern in Civil Engineering (3-0) Assignments which are individual or group investigations under the guidance of one or more faculty members. Three hours. Staff.

194 Extern in Civil Engineering (3-0) Assignments consisting of practical engineering experiences in selected public and private organizations. Each student will work under the guidance of an experienced engineer or other professional person. Three hours. Staff.

210 Airphoto Interpretation (2-3) Techniques in aerial photographic interpretation; principles of stereoscopic viewing and identification of the airphoto features related to land form, vegetation, drainage, soil color tone, and topography, and cultural features; special techniques in remote sensing; and the use of airphoto interpretation in soil identification, agricultural and forest surveys, water and air resource studies, regional and urban planning, and site and route locations. Prerequisite: Senior or Graduate standing. Three hours. Olson.

220 Construction Engineering (3-0) Discussion of construction processes; relationship of techniques to design details and specification requirements; sequence studies by means of CPM and PERT; measurements of construction efficiency, cost estimating, and specifications; and case studies of local projects. Prerequisite: Senior or Graduate standing. Three hours. Olson.

225 Engineering Economy (3-0) Mathematical comparison of alternatives to maximize the financial return on engineering decisions and processes; project feasibility studies and design decision making; effect of taxes on engineering decisions; and analysis of risk and uncertainty. Prerequisite: Senior or Graduate standing. Three hours. Dawson.

226 Civil Engineering Systems Analysis (3-0) Development of operations research techniques including linear and dynamic programming, inventory theory, replacement theory, queuing models, networks, and scheduling; procedures for solving complex problems; and application of systems analysis to problems in civil engineering. Prerequisite: Senior or Graduate standing. Three hours. Dawson, Oppenlander.

230 Urban Planning Techniques (3-0) Theories on the size, spacing, and functions of cities; economic, social, and physical determinants of various land-use elements; basic studies for urban planning; and the process of land-use planning including location and space requirements and the development of the land-use plan. Prerequisite: Senior or Graduate standing. Three hours. Dawson, Oppenlander.

231 Urban Planning Analysis (3-0) History and development of urban planning; approaches to planning with attention to city design and appearance, quantitative methods in planning, and social welfare planning; plan implementation; organization and administration of planning agencies; and financial planning. Prerequisite: Senior or Graduate standing. Three hours. Oppenlander.

232 Community Design Basic principles and methods of planning and designing the total community; site selection; and elements of physical layout and design. Design projects dealing with community elements such as subdivisions, industrial parks, new towns, etc. Three hours. Oppenlander.
233 Regional Planning (see Resource Economics 223).

240 Traffic Engineering Characteristics (3-0) Basic components of highway travel including driver, vehicle, roadway, environmental, and pedestrian characteristics; traffic flow and intersection characteristics; highway and intersection capacities; performance of traffic systems; and techniques for measuring traffic characteristics. *Prerequisite:* Senior or Graduate standing. Three hours. Dawson.

241 Transportation Systems Engineering (3-0) Interdisciplinary aspects of transportation systems and their technological characteristics; mathematical analysis and synthesis of system problems; economic consideration of transportation; fiscal studies and financial planning; and administration of transportation systems. *Prerequisite:* Senior or Graduate standing. Three hours. Dawson.

242 Traffic Engineering Operations Design and application of traffic control devices including signals, signs, and markings; regulation of traffic flows, speeds, and parking; safety engineering; design of off-street parking facilities; and evaluation of traffic engineering improvements. *Prerequisite:* 240. Three hours. Staff.

244 Urban Transportation Systems Transportation planning process for urban areas; inventory, use, and desire studies for urban transportation; techniques of travel forecasting and trip generation, distribution, and assignment; planning, design and operation of mass transit systems; location and design of terminal facilities. Three hours. Oppenlander.

250 Environmental Facilities Design-Water (2-3) Design of water supply systems including source evaluation, transmission, distribution; water treatment plant design; equipment selection; wells. Spring of odd years. *Prerequisite:* 151. Three hours. Cassell.

251 Environmental Facilities Design-Wastewater (2-3) Design of wastewater conveyance and treatment facilities; sewage treatment plant design; equipment selection. Spring of even years. *Prerequisite:* 151. Three hours. Cassell.

252 Industrial Hygiene (3-2) Industrial hygiene problems; effects of pollutants on health; threshold limit values; emphasis on the engineering evaluation of the hazard and control techniques. *Prerequisites:* Chemistry 5, Physics 25. Spring. Three hours. Hemenway.

253 Air Pollution (2-3) Sources of air pollution, methods of measurement, standards, legal aspects and control techniques available. Emphasis placed on source testing and source control. *Prerequisites:* Chemistry 5 and Mathematics 21 or 23. Fall. Three hours. Hemenway.

254 Solid Wastes (3-0) Significance of solid wastes from municipal, industrial, agricultural, mining; optimization and design of collection, disposal, recycle systems; sanitary landfills, incineration, composting, material recovery. *Prerequisites:* Chemistry 5 and Physics 25. Spring of even years. Three hours. Cassell.

255 Water Renovation Processes-Chemical/Physical (2-3) Design theory of chemical/physical processes for treating waters and wastewaters; mass transfer, coagulation/precipitation, sedimentation, filtration, mixing, absorption, ion exchange, membrane processes; pilot plant experimentation.
Prerequisites: 160, Chemistry 5, Mathematics 24, Senior or Graduate standing. Fall of even years. Three hours. Cassell.

256 Water Renovation Processes-Biological (2-3) Design theory of biological processes for treating waters and wastewaters; aerobic, anaerobic, photosynthetic processes; disinfection; pilot plant experimentation. Prerequisites: Mathematics 24, Senior or Graduate standing. Fall of odd years. Three hours. Cassell.

257 Analysis of Aquatic Systems (3-0) Quantitative study of biological, chemical and physical phenomena in lakes, streams and estuaries; mathematical modeling applied to management of water quality. Prerequisites: 150 and 160. Spring of odd years. Three hours. Cassell.

258 Environmental Facilities Design-Air (2-3) Advanced design principles for air pollution control equipment including scrubbers, precipitators, cyclones and filters. Prerequisites: 150, 252 or 253. Spring of odd years. Three hours. Cassell.

259 Measurement of Airborne Contaminants (2-3) Quantifying airborne contaminants from processes and ambient levels. Laboratories demonstrate calibration and measurement, stack sampling and ambient air monitoring and specific contaminants. Prerequisites: 252 or 253. Spring of even years. Three hours. Hemenway.

260 Hydrology (3-0) The basic theory of precipitation, run-off, infiltration, and ground water; precipitation and run-off data; and application of data for use in development of water resources. Prerequisite: 160 or Mechanical Engineering 142. Three hours. Downer.

261 Open Channel Flow (3-0) Application of the basic laws of fluid mechanics to flow in open channels; boundary layer theory; design of channels and transition structures; non-uniform flow; and non-uniform, spatially-varied flow problems. Prerequisites: 160, Mathematics 271. Three hours. Downer.

263 Measurements in Applied Hydrology (2-3) Design of hydrologic experiments; observational methods, equipment and problems in describing precipitation, runoff, air temperature, relative humidity, wind movement, solar radiation, evaporation, soil temperature; infiltration, soil moisture, soil density, soil water pressure, sediment load, and snow density; data reduction and handling techniques; and application to the instrumentation and study of the hydrology of a small watershed. Prerequisite: 163 or 260. Three hours. Downer.

270 Advanced Indeterminate Structures (3-0) Matrix analysis of one, two, and three dimensional indeterminate structures using the finite-element approach; formulation and solution by the flexibility and direct stiffness matrix methods; emphasis on computer applications. Prerequisites: 171 and a basic knowledge of matrix algebra. Three hours. Laible.

271 Prestressed Concrete Structures (3-0) Ultimate strength theory for concrete structures with emphasis on prestress effects; prestressed beam analysis, load balancing methods, columns, and piles, bent analysis, yield-line theory, and circular prestressing in domes and tanks; and discussion of current design specifications. Prerequisite: 173. Three hours. Laible.

280 Applied Soil Mechanics (3-0) Use of soil mechanics in the evaluation of building foundations, braced excavations, earth structures; lateral
earth pressures, pile foundations, pier and caisson foundations, slope stability, and construction problems. Prerequisite: 180. Three hours. Olson.

282 Engineering Properties of Soils (2-3) Study of soil properties that influence the engineering behavior of soils; subject areas include soil mineralogy, physiochemical concepts, plasticity properties, permeability and compaction; and laboratory study of soil index properties, permeability, and compaction tests. Prerequisite: 180. Three hours. Olson.

290 Engineering Investigation (3-0) Independent investigation of a special topic under the guidance of a staff member. The course work may consist of literature investigations, unique design problems, and/or laboratory and field studies. Preparation of an engineering report is required. Prerequisite: Senior standing or departmental permission. Three hours. Staff.

Engineering, Electrical

COLLEGE OF ENGINEERING, MATHEMATICS AND BUSINESS ADMINISTRATION

Professors Evering, Handelsman, Lai, Lambert, Roth and Rush (Chairman); Associate Professors Absher, Mirchandani, Taylor and Williams; Lecturer Hogel.

Undergraduate Courses

94 Bioengineering Applications of Physical Principles II (3-3) Application of the principles of electromagnetism and electrical engineering to an understanding of the structure and function of the human body and to diagnostic and therapeutic instrumentation. Four hours.

100 Electrical Engineering Concepts (3-3) Designed for students not majoring in Electrical Engineering; introduction to electrical measurements and circuit theory; energy conversion, instrumentation, and digital systems for science and industry. Prerequisites: Math. 121 and Physics 25. Four hours.

111 Control Systems (3-0) Theoretical background for analysis and

113 Energy Conversion I (3-0) Principles basic to electromechanical energy conversion devices and systems. Concepts associated with the interchange of energy among electrical magnetic and mechanical circuit elements. Continuous energy conversion in the ideal and practical rotating machine. Machine dynamics. Prerequisites: 3 or 100. Three hours.

114 Energy Conversion II (3-0) Analysis of present and future systems for energy conversion to electricity, primarily; other energy end-forms are included for overall perspective. Emphasis is on systems (e.g., fossil fuel, hydro, geothermal, fission, fusion, solar, wind, etc.) their technical operation characteristics, economics, and environmental impact. Designed for electrical and other engineers and scientists. Prerequisite: Physics 25. Three hours.

123 Electronics III (3-0) Analysis of pulse and digital circuits. Design of transistor logic gates, multivibrators, and blocking oscillators. Prerequisite: 122. Three hours.

143, 144 Electromagnetic Field Theory (3-0) Basic laws and elementary applications of electromagnetic fields; electrostatics, magnetostatics, Faraday’s law, Maxwell’s equations, plane waves, transmission lines, waveguides, and antennas. Prerequisites: 4 or Physics 25 for EE 143; 143 or Physics 213 for E.E. 144. Three hours.

146 Wave and Diffusion Analogies (3-0) Electromagnetic waves on lines in space. Vibration of strings and membranes. Mechanical waves in fluids and solids. Electromechanical transducers. Thermal waves. Diffusion process. Prerequisite: 144. Three hours.

162 Solid State Physical Electronics I (3-0) Introduction to the physics of atoms and crystals through quantum and statistical mechanics. Application of these principles to semiconductor devices. Prerequisite: Physics 128. Three hours.

163 Solid State Physical Electronics II (3-0) Theories of conductivity, dielectric constant, magnetic permeability, optical properties, piezoelectricity, ferroelectricity, pyroelectricity, magnetostriction. Prerequisite: 162. Three hours.

171 Signals and Systems (3-0) Fourier series and Fourier integral. Pulse, periodic, and random signals and their spectra. Correlation functions and power spectra of signals. Transmission of signals through linear systems. Prerequisites: 4 and Statistics 151. Three hours.

176 Theory of Communications (1-0) For students of Speech Pathology, Special Education, Psychology, Life and Social Sciences. Includes definitions of information and coding, effects of bandwidth, noise and channel capacity. Applications includes communications aids for the physically handicapped, remote communications, animal-human communication experiments, sensory resolution, ESP, the genetic code, the nervous system. One hour.

Laboratories

Each student will keep a laboratory notebook which will be collected and checked periodically by the instructor. He will prepare one experiment in a form suitable for publication and will present his paper to the class and other interested persons. The student will be graded on the notebook as well as the final written and oral presentation.

81 Sophomore Laboratory (0-3) Direct current measurements, nonlinear resistive elements, electron ballistics, the cathode ray oscilloscope, transients in RC circuits, alternating current measurements, sinusoidal behavior of RL and RC circuits, transients and sinusoidal behavior of RLC circuits. One hour.

82 Sophomore Laboratory (1-3) Alternating current bridges, resonant harmonic analyzer, acoustic resonance, measurement of charge, current, voltage, power, resistance, capacitance, inductance, and time. Prerequisite: 81. Two hours.

183 Junior Laboratory (1-3) Two dimensional field mapping; electrostatic field plots, duals, and analogs; magnetic fields and circuits; magnetic forces and the magnetic field as an energy source. Input-output characterizations of linear time invariant systems. Introduction to active circuits; amplification and oscillation. Prerequisite: 82. Two hours.

184 Junior Laboratory (1-3) Active device characteristics, Power supplies a.m. and f.m. modulation and detection. Transformers, magnetic amplifiers, a-c and d-c machines. Prerequisite: 183. Two hours.

185 Senior Laboratory (1-3) Electrical conductivity in solids, the Hall effect, properties of gaseous conductors and dielectric materials. Control systems. Electromechanical transducers. Prerequisite: 184. Two hours.

186 Senior Laboratory (0-3) Design and construction of pulse and digital circuits including logic gates, astable multivibrators, bistable multivibrators, monostable multivibrators, and blocking oscillators. Prerequisite: 185. One hour.

187, 188 Senior Project (0-3), (0-3) Experimental or theoretical project selected by the student and conducted under staff supervision. One hour.
Advanced Undergraduate and Graduate Courses

230 Digital Computer Logic, Circuits and Systems (3-0) The logical design digital computers. Boolean algebra as an aid to circuit design. Circuits and components for the transmission, storage and modification of information and their combination into arithmetic units, memory devices, program controls and micro-processors. Prerequisite: Graduate standing or Departmental permission. Three hours. Staff.

231 Computer Applications for Design and Manufacturing (3-0) Computer hardware and software concepts. Basic and advanced APL Program Language, practical computer applications. Prerequisite: Department permission. Three hours. Staff.

232, 233 Hybrid Computers (3-0) Systems design concepts and use of interconnected analog and digital computers as an engineering tool are stressed. Selected problems from mathematics, biological and physical sciences are solved on a hybrid computer. The use of logic and decision as well as analog/digital and digital/analog conversion are stressed. Prerequisites: Math. 121 or departmental permission. Three hours.

234 Minicomputer Systems and Microprocessors (3-0) Introduction to mini and micro computers; hardware and peripherals; software and programming aspects; operating characteristics and configurations; mini/micro computer systems applications; discussion of system reliability, installation, and maintenance; future trends of minis and micros. Prerequisite: Senior standing in Electrical Engineering or Computer Science or departmental permission. Three hours. Staff.

235 Electronic Instrumentation for Scientists (3-3) Introduction to electrical components and circuit theory, electrical measurements, oscilloscopes, power supplies, amplification by vacuum tubes and transistors,
oscillators, comparison measurements, servo systems, operational amplifiers for measurement and control, electronic switching circuits, timing and digital counting systems. This course may not be taken for credit by students in Electrical Engineering. Prerequisites: College physics and calculus or permission of the instructor. Four hours. Staff.

236, 237 Fundamentals of Digital Computer Design (3-0), (3-0) Fundamentals of logical design. Design of combinational and sequential logic circuits. Implementation of arithmetic operations. Memory systems. Instruction codes. Dynamic storage allocation. Graduate credit not given for both 230 and 236. Prerequisites: CS 101 or E.E. 32 or equivalent, 230, or 236 for 237. Three hours.

239 Transient Phenomena (3-0) Study of complex variable basis of Laplace and Fourier Transforms; applications to transient behavior of lumped and distributed parameter systems, root locus. Nyquist criterion and two dimensional field problems. Prerequisite: 4. Three hours. Rush.

240 Boundary Value Problems in Electromagnetism (3-0) Solution of classical problems of electromagnetism using images, conformal mapping and separation of variables methods. Prerequisite: 144. Three hours. Rush.

242 Theory and Applications of Time-Varying Fields (3-0) Maxwell’s Equations and boundary conditions for time varying systems. Propagation and reflection of electromagnetic waves, guided electromagnetic waves, resonant cavities, and microwave networks. Prerequisite: 240 or departmental permission. Three hours. Handelsman.

244 Radar Systems Engineering (3-0) Radar theory including antennas, propagation, signal detection and parameter estimation. Applications including search and track radars, aircraft control and landing, radio/radar astronomy, and modern phased array radars. Prerequisite: 174 or departmental permission. Three hours. Handelsman.

251 Applications of Linear Algebra (3-0) Introduction of basic definitions and concepts of linear algebra; formulation and solution of engineering problems. Definitions of linear vector and function spaces, linear operators, change of basis, spectral representation of operators, the eigen-value problem, functions of matrices. Application to problems of state variable analysis, field theory, mechanics, quantum mechanics and signal theory. Prerequisites: Graduate standing in EE or Physics or departmental permission. Three hours. Rush.

261 Transistor Engineering (3-0) Introduction to energy band theory and the effective mass concept. Analysis of the transport properties of holes and electrons. Characteristics of PN junctions. Theory of transistors as developed from drift and diffusion properties of carriers. Charge control model of transistor switch. Prerequisite: Math. 121. Three hours. Lambert.

262 Transistors (3-0) The fundamental principles of semi-conductor operation. P and N type conductivity; the PN junction; construction of the junction transistor. Circuit analysis of transistor operation in terms of hybrid parameters. Analysis of MOSFET device characteristics and equivalent circuits. Prerequisite: 261. Three hours. Staff.

270, 271 Signal Processing (3-0) Signal-space concepts. Processing
of analog and digital signals. Representation and analysis of nonrandom and random signals. Signal measurement techniques. Analysis and design of digital filters. Applications to real-world signals such as biosignals and signals in communication and radar systems. **Prerequisites:** Graduate standing in Electrical Engineering or 171, 270 for 271. Three hours. Lai.

272 Information Theory (3-0) Introduction to probability concepts of information theory; entropy of probability models; theoretical derivations of channel capacity; coding methods and theorems, sampling theorems. **Prerequisite:** Statistics 151. Three hours.

281 through 284 Seminars (1-0) Presentation and discussion of advanced electrical engineering problems and current developments. **Prerequisite:** Senior or Graduate engineering enrollment. One hour.

285 Creative Engineering (3-0) Creative techniques applied to problems in process control, biomedical engineering, communications, circuit design. **Prerequisites:** Graduate standing in EE or departmental permission. Three hours. Roth.

287, 288 Special Topics (3-0) Formulation and solution of theoretical and practical problems dealing with electrical circuits, apparatus, machines or systems. **Prerequisite:** 4. Three hours.

## Engineering, Mechanical

**College of Engineering, Mathematics and Business Administration**

**Professors von Turkovich (Chairman), Gaden, Martinek, McLay, Outwater, and Tuthill; Associate Professors Carpenter, Duchacek, Hundal and Marshall; Assistant Professor Pope; Adjunct Professors Gardiner and Liu.**

1 Technical Graphics I (0-6) Familiarization with and use of drawing materials and equipment; geometric constructions; free hand sketching and lettering; pictorials; charts and graphs; orthographic projection and multiview drawings; topographic drawings; introduction to descriptive geometry. The student is expected to furnish his (her) own drafting equipment. Two hours. Tuthill.

92 Thermodynamics I (3-0) Engineering thermodynamics with particular emphasis on energy forms, the development of thermodynamics laws, equilibrium, fixed and variable mass systems, reversibility and entropy. **Prerequisites:** Math. 22, Physics 24. Three hours. Tuthill.

93 Bioengineering Applications of Physical Principles I (3-3) Applications of the principles of mechanics, thermodynamics and mechanical engineering to an understanding of the structure and function of the human body and to diagnostic and therapeutic instrumentation. Four hours. Hundal.

100 Materials I (3-0) Mechanics concepts; force transmission; stress, strain, temperature relationships; torsion; bending stresses; deflections in torsion and bending; stability; redundant structures. **Prerequisite:** 133. Three hours. Outwater.

101 Materials II (3-0) Electronic, atomic and crystal structures; imperfections; phases in solids; equilibrium diagrams; non-equilibrium transforma-
tions; thermodynamics of solids and surfaces; rates of reaction diffusion; corrosion. *Prerequisite:* 100. Three hours. Outwater.

102 Materials III (3-0) Mechanical testing; fracture and failure mechanisms; strengthening mechanisms; ceramics; polymers; plastic deformation. *Prerequisite:* 101. Three hours. Outwater.

111 Thermodynamics II (3-0) Properties and processes of fluids; the perfect gas, and approximate relationships for real gases; application of thermodynamics principles to areas such as combustion, mixtures, power cycles, gas compression, and refrigeration. Laboratory on problems and analysis. *Prerequisite:* 92. Three hours. Tuthill.

113 Thermodynamics and Heat Transfer (3-0) Fundamental principles of engineering thermodynamics; application of these principles to thermodynamic cycles; heat transfer. *Prerequisites:* Physics 24; Math. 22. Three hours. Martinek.

115 Thermodynamics (3-0) The first and second law of the classical thermodynamics; introduction to statistical mechanics, Boltzmann, Bose-Einstein and Fermi-Dirac statistics, partition function; microcanonical, canonical and grand canonical ensembles; kinetic theory of gases; introduction to statistical thermodynamics; derivation of thermodynamic properties of perfect gases and solids; Maxwell relations; chemical equilibrium; the behavior of real gases and liquid; phase equilibrium and multicomponent systems. *Prerequisites:* Physics 128, Math. 22. Three hours. Martinek.

119 Engineering Experimentation (1-3) Engineering Measurements; experimental error; test sequences; data analysis. Experiments using the project method to investigate engineering principle, instrument capability and the theory of experimentation. *Prerequisite:* Junior standing in M.E. Two hours. Staff.

133 Dynamics I (3-0) Fundamentals of kinematics; analysis and synthesis of displacement, velocity and acceleration with respect to fixed and moving frames of reference; principles of particle and rigid body motion; conservation principles of dynamics and their application in the solution of dynamics problems; dynamic analogies between mechanical, fluid and electrical systems. *Prerequisite:* CE 01. Three hours. Hundal.

135 Engineering Design I (3-3) Application of fundamental principles to the design of machine elements including consideration of function, production, and economic factors with emphasis on engineering mechanics. Projects including experimental and analytical work. *Prerequisites:* 100, 133. Four hours. Carpenter.

142 Fluid Mechanics (3-0) Dynamics of an ideal fluid; energy and momentum relations; similitude; flow in conduits; boundary layer mechanics; com-
pressibility phenomena; wing theory; hydrodynamic lubrication; fluid machines and controls. **Prerequisites:** 111 or 113, 133. Three hours. Duchacek.

**144 Fluid Mechanics Laboratory (0-3)** Mechanics of fluids with emphasis on both compressible and incompressible flow; flow measurement in ducts and channels; experiments with fluid machinery. **Prerequisite:** 142 or CE 160. One hour. Duchacek.

**191, 192 Thesis (0-9)** Investigation of a research or design project under the supervision of an assigned staff member culminating in an acceptable thesis. **Prerequisites:** Senior standing and departmental permission. Three hours. Staff.

**200 The Engineering Profession (2-0)** The professional practice of engineering; laws and professional attitudes regarding design, standards of patient safety, liability, insurance, industrial hygiene and contracts. **Prerequisite:** Senior standing. Two hours. Outwater.

**201 Safety Engineering (2-0)** Safety management and standards, recognition and control of environmental, mechanical, electrical and chemical hazards, fire prevention, personal protective equipment. **Prerequisite:** Senior standing in Engineering or Business Administration or permission of instructor. Two hours. Marshall.

**203 Mechanical Vibrations (3-0)** Vibration phenomena in single and multi-degree of freedom systems. Response of systems to periodic and transient excitation. Isolation of shock and vibration. Impedance; matrix and numerical methods for vibration problems. **Prerequisite:** Senior standing. Three hours. Hundal.

**206 Application of Computers in Engineering (3-0)** Utilization of digital and analog/hybrid computers as engineering tools for the solution of complex engineering problems. **Prerequisite:** Senior standing. Three hours. Hundal.

**211 Advanced Mechanical Structure I (3-0)** Statically indeterminate problems in bending; general expression of strain energy; theorem of Castigliano and the unit load method; theory of curved beams; beams on elastic foundations; unsymmetrical bending; torsion of thin sections. **Prerequisite:** Senior standing. Three hours. McLay.

**222 Advanced Mechanical Structures II (3-0)** Theory and applications of the force, and displacement matrix methods of analysis; basic theory of elasticity including analysis of stress, the equilibrium equations; analysis of strain, the compatibility equations, and generalized Hooke's law; introduction to plasticity; problems of plane stress and plane strain; finite differences and variational methods. **Prerequisite:** Senior standing. Three hours. McLay.

**231 Materials Processing II (2-3)** Fundamentals of forming from liquid state, plastics forming, metal joining, powder metallurgy. **Prerequisites:** 100, 113. Three hours. von Turkovich.
232 Micromanufacturing Technologies (3-0) Crystal growth, defects, diffusion mechanisms, theory and practice. Thin film processes, vacuum, chemical vapor deposition; selection of integrated circuit materials and processes; photolithography; interconnection technologies and packaging. Manufacturing engineering for semi-conductors, plant and equipment aspects. Prerequisite: Senior standing or departmental permission. Three hours. Gardiner.

243 Advanced Fluid Mechanics (3-0) Foundations of compressible flow; isentropic flow; normal and oblique shock waves; Prandtl-Myer flow; flow with friction and with heating and cooling; flow in electric and magnetic fields; potential flow; linearized flows; method of characteristics. Prerequisite: 142. Three hours. Duchacek.

244 Compressible Flow (3-0) Introduction to flow in two and three dimensions; steady irrotational flow; small perturbations; the hodograph method; the Karman-Tsien, Prandtl-Glauert, and Gothert’s methods; supersonic airfoils; the method of characteristics; oblique shocks; shock waves and boundary layer interaction. Prerequisite: 243. Three hours. Duchacek.

245 Advanced Fluid Mechanics Laboratory (0-3) Mechanics of fluids with emphasis on compressible flow; flow-measurement; fluid machinery; aerodynamics; compressible flow in nozzles and ducts; high Mach number effects; field mapping. Prerequisite: 243 or concurrent enrollment therein. One hour. Duchacek.

246 Aerodynamics (3-0) Application of the principles of fluid mechanics to the design and performance of aircraft; fluid dynamics; experimental facilities; airfoil characteristics; aspect ratio and plan-form influences; viscosity phenomena as applied to boundary layer; transition and separation on various shapes; compressibility phenomena; the optimum airfoil; performance. Prerequisite: 142. Three hours. Duchacek.

261 Energy (3-0) The study of energy, including sources, methods of conversion, utilization, and the effects on the environment. Recognition of the second Law is emphasized. Prerequisites: 111 and 266. Three hours. Tuthill.

262 Thermal Systems (3-0) Application of engineering thermodynamics to the analysis of thermodynamic machines and processes; problems of gas turbine, jet propulsion, nuclear power plants, energy conversion devices and other areas of current interest. Prerequisite: 261. Three hours. Tuthill.

264 Thermal Environmental Engineering (3-0) The principles of psychrometrics, heat transfer and fluid mechanics applied to thermal environments and their control for man, animal or process. Prerequisites: 111, 142, 266. Three hours. Tuthill.

266 Heat Transfer (3-0) Fundamental principles of heat transfer; conduction, convection, radiation; steady and unsteady state; the electric analogy; applications to heat transfer equipment. Prerequisites: 111 or 113 and Math. 271. Three hours. Duchacek.

267 Advanced Thermodynamics (3-0) A rigorous detailed study of the laws of thermodynamics and of ideal and actual thermodynamic processes. Prerequisites: 111 or 113 and Math. 271. Three hours. Martinek.
272 Mechanical Behavior of Materials (3-0) Elastic and plastic behavior of single crystals and polycrystals; dislocations; approximate plastic analysis; anisotropic materials; hardness; residual stress, brittle, transitional and ductile fractures; fatigue; damping; creep and surface phenomena. Prerequisite: Senior standing. Three hours. Outwater.

275 Human Factors (2-3) Human sensory capabilities and limitations, design of information input, human motor activities and space relationships, intro. to work measurement. Three hours. Prerequisite: Junior standing. Marshall.

276 Plant Planning and Design (3-3) Analysis of facilities and services requirements, material handling, office and clean room layout, mathematical and computer techniques, safety and plant conservation. Four hours. Prerequisite: 131 or permission of instructor. Marshall.

281, 282 Seminar (1-0) Presentation and discussion of advanced mechanical engineering problems and current developments. Prerequisite: Senior or Graduate Engineering enrollment. One hour. Staff.

286 Mechanical Engineering Laboratory (0-9) A laboratory experience designed to the particular interest of the student, utilizing and synthesizing his total mechanical engineering educational experience. Prerequisite: Senior standing in Mechanical Engineering. Three hours. Staff.

295, 296 Special Topics (3-0) Advanced study and discussion in areas dependent on the interest of the students. Prerequisites: Senior or Graduate standing and departmental permission. Three hours. Staff.

297 Nuclear Engineering (3-0) Neutron chain reactions and the criticality condition; the slowing down of neutrons in an infinite medium; one-speed diffusion of neutrons in a multiplying and non-multiplying system combined slowing down and diffusion; bare and reflected homogeneous reactors; time-dependent behavior of reactors; reactor control theory; reactor accident and transient analysis. Prerequisite: Senior standing. Three hours. von Turkovich.

English

COLLEGE OF ARTS AND SCIENCES

Professors Bogorad, Broughton, Clark, Cochran (Chairman), Jones, Long, Orth, Poger, Rothwell and Shepherd; Associate Professors Eschholz, Hall, Howe, Huddle and Rosa; Assistant Professors Biddle, Bradley, A. I. Dickerson, Edwards, Gutman, Simone, Stanton, Stephany, Sweterlitsch and Thompson; Lecturer M. J. Dickerson.

Unless otherwise indicated, all courses in the Department of English carry three hours of credit.

1 Written Expression A course in writing with some selected readings as examples of style and writing strategies. Staff.

2 Types of Literature An introduction to fiction, poetry, and drama — past and present, British and American. Staff.
3 Genre: Drama  An approach to the play as a work of literature and as a dramatic experience. The course will include a variety of Continental, British, and American drama and will range from the classical to contemporary periods. Staff.

4. Genre: Fiction  Exploration of a variety of fictional forms which will include the short story, novella, and the novel. Staff.

5 Genre: Poetry  An examination of the forms of poetry, past and present, British and American. The course will provide a wide variety of perspectives on the poem. Staff.

6 Theme Course  Exploration of a single literary theme by examining a variety of genres. Subject matter will change from semester to semester. Some representative topics have been: War and Violence, Myth and Literature, and Ecology. Staff.

7, 8 British Literature  A survey of major figures in British literature such as Chaucer, Milton, Swift, Wordsworth and Shaw. The course is of special value to students planning for a major in English, though it has interest for anyone wishing a sound introduction to literary history. Staff.

9, 10 American Literature  A survey of major American writers, from the beginning of the nineteenth century down to the present, such as Poe, Thoreau, Hawthorne, and Melville (9); Twain, Eliot, Hemingway, and Faulkner (10). Staff.

11, 12 World Literature  A survey in comparative literature dealing with the great writers of the world to include Homer, Dante, Milton, and similar major figures. For students planning a major in English, this background is valuable in providing a context for English and American literature. Staff.

13 Introduction to the English Language  Topics will include consideration of language as a part of human behavior, history of the language, dialects of American English, lexicography, and the new analyses of English. Clark, Eschholz, Rosa.

20 Science Fiction and Fantasy Literature  Representative modern works of fantasy and science fiction, including works by Asimov, Tolkien and Clarke. I, II. Stanton.

50 Expository Writing  Writing and analysis of expository essays (Sophomore standing a prerequisite). Howe, Sweterlitsch.

53 Writing: Poetry and Fiction  An introductory course in the techniques of writing poetry and short prose fiction. Classes are organized around the discussion of student work and the problems arising from weekly writing assignments (preference in enrollment given to sophomores). Broughton, Edwards, Huddle.

Unless otherwise stated, the prerequisite for any course in the Department of English numbered 100-199 is 6 hours of English (or exemption), or Junior standing and permission of instructor.

101 Chaucer  Stephany.

107, 108 Shakespeare  Howe, Rothwell.

133, 134 The Development of American Literature  The emergence and growth of a national literature. First semester: Colonial times to the
Civil War; second semester: from the Civil War to the present. Poger, Shepherd.

135, 136 **Canadian Literature** The development of a national literature. Required of students in the Canadian Area Studies Program. Thompson.

138 **Modern British Novel** Stanton.

140 **Modern Short Fiction** Cochran, Gutman, Jones, Shepherd.

142 **Contemporary American Novel** Significant American novelists since 1945. Cochran, Gutman, Shepherd.

143 **Literature of Black America** Poetry, fiction, and drama by black writers since the turn of the century. Gutman, Orth.

151 **Philosophy and Literature** See Philosophy.

159 **Contemporary American Poetry** American Poetry since 1950. Edwards.

161 **Utopian and Anti-Utopian Fiction** Themes and literary characteristics of selected English and American utopias and dystopias from the Renaissance to the present. Bogorad.

162 **Women in Literature** Consideration of the changing roles of women through examination of the images, archetypes, and stereotypes of women characters in selected literary works, primarily British and American. Clark.

165 **Introduction to Folklore** Basic concepts of folklore — folklife study; development of the discipline; survey of major genres: material culture, oral literature, custom, and kinetic lore; role of folklore in modern society. Sweterlitsch.

177, 178 **Advanced Writing** Students follow their own interests in the writing of poetry and fiction. Permission of instructor required. **Prerequisite:** 53. Broughton, Huddle.

182 **Seminar for Prospective Teachers of English** Grammar and language; literary interpretation and criticism; allied problems useful to teachers of English. **Prerequisite:** 50, 261. Biddle, Stanton.

192 **Major Topics in English and American Literature** Studies in literary figures, periods, movements, ideas and genres. Primarily for English Majors. **Prerequisites:** Junior standing and English Major. Seminars limited to 15 students. Staff. Departmental permission required.

193, 194 **College Honors** Departmental Permission required. Not to exceed three hours per semester.

195, 196 **Special Topics** Not to exceed three hours per semester.

197, 198 **Reading and Research** Departmental Permission required. Not to exceed three hours per semester.

Unless otherwise indicated, the prerequisites for any course numbered 199 to 299 is six hours of English and Junior standing.

200 **Old English** The sounds, words, and structure of Old English;
simple prose texts and selections from *Beowulf*. Dickerson. Alternate years, 1977-78.

202 Medieval Literature The forms (in translation) of medieval literature, with emphasis on Arthurian materials. Stephany.

204 Middle English Literary, historical, and linguistic considerations of Middle English texts, excluding Chaucer. Dickerson. Alternate years, 1976-77.

205, 206 English Drama to the Closing of the Theatres First Semester: From the drama in the Middle Ages to Marlowe and Jonson. Second Semester: Jacobean Drama (exclusive of Shakespeare), to include Webster, Tourneur, and Ford, to the closing of the Theatres in 1642. Alternate years, 1976-77. Howe, Rothwell.

209, 210 Elizabethan Prose and Poetry First semester: from More and Wyatt to Spenser and contemporaries; second semester: Donne, Jonson and followers; development of prose from ornateness to simplicity. Three hours. Alternate years, 1977-78. Long.

212 Milton *Paradise Lost, Paradise Regained, Samson Agonistes*, some minor poems, and selected prose works. Bogorad.

227, 228 English Novel English fiction from its origin through the nineteenth century. Hall, Stanton.

235 Modern British Drama British and continental plays of the 19th and 20th centuries, including plays by Ibsen, Pinter and Beckett. Simone.

236 Modern American Drama Recent and contemporary, including plays by O'Neill, Miller and Williams. Orth.

239 Modern British Poetry A study of selected British poets since World War I, including Eliot, Yeats and Auden. Poger.

244 Modern Irish Literature Irish literature from 1890 to the present, with emphasis on Joyce and Yeats. Bradley.

250 The Literature of Vermont An exploration of Vermont writing from the narratives of the Allen brothers to the poetry and fiction of today. Three hours. Biddle, Eschholz.
251, 252 American Novel of the Nineteenth Century First semester: Hawthorne, Melville, and others; second semester: Twain, Howells, James and others. Biddle, Eschholz, Shepherd.

254 Emerson, Thoreau and Their Circle Orth. Alternate years, 1977-78.

256 Regional Writing in America Selected works by Cooper, Harte, Garland, Twain, Faulkner, and others, including units on local color and Southwest humor. Cochran. Alternate years, 1976-77.

257 American Poetry to World War I Major American poets to 1917, including Poe, Whitman, Dickinson, and others. Cochran, Gutman.

258 Modern American Poetry Major American Poets from World War I to 1950, including Frost, Stevens and Williams. Edwards, Poger.

261 Structure of the English Language Descriptive study of Modern American English I, II. Clark.

262 History of the English Language The principles of historical linguistics and their application to English. Clark. Alternate years, 1976-77.

264 English Stylistics Introduction to English stylistics through consideration of changing conceptions of style, evaluation of selected methods of stylistic analysis, and comparison of various literary styles. Clark. Alternate years, 1977-78.

266 American English Dialects The emergency of American English with special attention to dialectology. Prerequisites: 13, Linguistics 101 or by permission of the Instructor. Eschholz.

273 Technique and Criticism of Poetry Intensive analysis of various kinds of poetry to develop appropriate critical methods and standards. Bogorad.

276 Contemporary Criticism A seminar in selected contemporary critical methods and interests. Poger.

278 Modern Tradition Special topics necessary for the understanding of the critical, intellectual and literary works of the modern period: Symbolism, Realism, Self-consciousness, Nature, the Unconscious, Myth and others. Poger, Gutman.

Environmental Studies

COLLEGE OF ARTS AND SCIENCES
COLLEGE OF AGRICULTURE
COLLEGE OF EDUCATION AND SOCIAL SERVICES
COLLEGE OF ENGINEERING, MATHEMATICS AND BUSINESS ADMINISTRATION
SCHOOL OF NATURAL RESOURCES
SCHOOL OF HOME ECONOMICS
Professor Reidel (Director); Associate Professor Wagner; Assistant Professor Worley; Lecturers Hudspeth, Freund, Morse.

1 Introduction to Environmental Studies I A study of environmental problems and issues from an interdisciplinary perspective. A broad survey of historic and contemporary environmental studies examining the ecological, socio-economic, aesthetic and technological influences determining the quality of life on earth. Prerequisite: Freshman standing or permission of instructor. Four hours. Reidel.

2 Introduction to Environmental Studies II A follow-up to Environmental Studies I with an emphasis on the political-legal-social aspects of environmental policy and problem-solving. Prerequisite: 1. Reidel, Freund.

51 Major Seminar An analysis of environmental problems and issues from the perspective of various academic disciplines and professional fields, with emphasis on interdisciplinary scholarship and research. Prerequisites: 1; Major in Environmental Studies; permission of Instructor. Three hours. Hudspeth, Reidel.

100 Environmental Theory A comparative analysis of emerging concepts of man/environmental relationships; the history, philosophy, and theoretical framework of environmental studies. Prerequisites: 2; Sophomore standing. Three hours. Freund.

191 Environmental Practicum Individual field projects under direction of a faculty member. Research, creative projects, internships. Credit arranged. Prerequisite: Permission of Environmental Program. Hudspeth.

195, 196 Special Topics

201 Research Seminar Planning, design, and methods of research for the study of environmental problems. Open to Junior Majors in Environmental Studies. Prerequisites: 51, 100. Three hours. Wagner.

202, 203 Senior Project and Thesis Individual research under staff direction. Prerequisites: 201, permission of Environmental Program, Major in Environmental Studies. Credit arranged. Reidel, Wagner.

204 Seminar in Environmental Studies Review and discussion of current environmental research and literature. Prerequisites: 100, Senior standing, Major or Coordinate-Major in Environmental Studies. Three hours. Reidel, Wagner.

Extra-Departmental Courses

COLLEGE OF AGRICULTURE

Agriculture

195, 196 Special Topics Appropriate for interdepartmental and interdisciplinary topics in Agriculture. Permission of Dean’s Office. Credit as arranged. Staff.

COLLEGE OF ARTS AND SCIENCES

Chemistry

7 Earth, Air, Fire and Water (3-3) See course description under Chemistry, page 172.
General Literature

72 Romance Literature in Translation Selected topics in Romance Literature. No knowledge of Romance languages required. Prerequisite: One year course in any literature. Three hours. Sandler and staff.

151, 152 Development of Prose Fiction First semester: Latin, Spanish, French; second semester: 1700 to present; French, Russian, English and/or German. Prerequisite: Sophomore standing. Three hours. Staff.

161, 162 German Literature in Translation Lectures on the development of German literature; readings and discussion of representative works in English translations. No knowledge of German required. Prerequisites: Sophomore standing and one year course in any literature. Three hours. Richel, Scrase.

181, 182 Russian Literature in Translation First semester: Russian masters of the nineteen century. Second semester: twentieth century writers from the symbolists to the present. Prerequisites: Sophomore standing and one year course in any literature. Three hours. Nalibow.

251, 252 Study of Movement, Genre or Topic Precise content of the course to be announced before the registration period, chosen from among the following (or similar) topics: Women in Literature; The Comic Spirit; The Grotesque in Modern Literature; Politics in Modern Literature; Existentialism; the Enlightenment. Prerequisite: Any 100 level literature course in any of the cooperating departments. Three hours. Staff.

Linguistics

101, 102 An introductory course designed to acquaint the student with the methods and theory of systematic observation and explanation of language phenomena (linguistics). Prerequisite: 101 for 102. Three hours. Clark, Wilson, Woolson.

COLLEGE OF ENGINEERING,
MATHEMATICS AND BUSINESS ADMINISTRATION

Engineering — see page (190).
Technology — see page (290).

Forestry

SCHOOL OF NATURAL RESOURCES

Professors Christensen, John, Reidel, Whitmore (Program Leader); Associate Professors Armstrong, Donnelly, Hannah, and Newton; Lecturers Bousquet and Turner; Adjunct Professor Foulds.

1 Introduction to Forestry Introduction to forestry and conservation sciences. Two hours. Donnelly.

2 Freshman Seminar Guest lecturers and student seminars on selected topics in forest resources management. One hour. Donnelly.
3 North American Trees (2-3) Survey of the principle forest trees of North America; their identification, silvics and major uses. Primary emphasis is directed toward trees of the eastern United States. (Not for credit by Forestry majors). Three hours.

5 Dendrology (3-4) Classification, silvical characteristics and identification features of native and introduced trees and shrubs. Prerequisite: Biology 1 or Botany 4. Four hours. Hannah.

100 Forest Biocology Structure, dynamics, and manipulation of selected forest communities. Prerequisite: 5. Twenty days in summer camp. Four hours. Donnelly, Fuller.

105 Man and the Forest Environment Forest resources, their uses and their influences with the environment. (Not open to forestry majors). Three hours. Staff.

107 Forest Entomology (See P & SS 107.) Three hours. MacCollom.

112 Forest Pathology (2-4) A survey of principal diseases of forest trees and deterioration of their products, with emphasis on identification, prevention, and suppression. Prerequisites: Botany 4 and Zoology 9 or Biology 1, 2. Three hours.

122 Silvics (2-4) Environmental factors and their influence upon the development, distribution, and succession of forest trees. Prerequisite: 5. Three hours. Donnelly.

123 Silviculture (2-4) Natural regeneration, production and tending of commercial forest stands. Prerequisite: 122. Three hours. Hannah.

124 Forest Regeneration Practical application of forest genetics, planting stock production and establishment in the artificial regeneration of forests. Prerequisite: Junior standing. Two hours. Staff.

126 Urban Forestry (2-4) Value of trees in the urban environment; selecting, planting, and maintaining landscape trees; diagnosis and control of disease, insect, and injury problems. Prerequisites: A course in tree identification and permission. Three hours. Donnelly.

132 Forest Fire Control Forest fire ecology and behavior; causes and effects; danger measurements; prevention and control of fires; use of fire in forest management. Prerequisites: Sophomore standing and one forestry course. Two hours. Whitmore.

135 Forest Recreation Planning (2-3) (See RM 135) Three hours. Lindsay.

136 Forest Management (2-2) The planning and organization of forests for multiple-use sustained yield production; environmental impact statements. Prerequisites: 123 and 144. Three hours. Armstrong.

140 Forest Biometry II Boundary and topographic survey methods in forest management. Principles of forest biometry in forest-data collection. Prerequisites: C.E. 12, Forestry 5 and 144. Twenty days in summer camp. Four hours. Newton, Turner.

142 Forest Photogrammetry (2-3) Identification, interpretation, measurement, and mapping of forest resources from aerial photographs. Prerequisite: 144. Three hours. Newton.
144 Forest Biometry I (2-4) Introductory concepts in forest biometry, measurement of trees and forest products, forest sampling and inventory with applications in multiple-use management. Prerequisite: Statistics 141. Three hours. Newton.

151 Forest Economics The economic principles and problems in the management and utilization of forest resources; taxation of forest lands. Prerequisites: A course in economics and a course in statistics. Three hours. Armstrong.

153 Forest Policy and Administration Analysis of public and private forest policies and their administration in relation to other natural resources and to the people. Prerequisite: Junior standing in forestry. Three hours. Christensen.

162 Wood Technology (2-4) Properties, uses and identification of commercial woods of the United States. Prerequisite: Botany 4. Three hours. Whitmore.

163 Timber Harvesting (2-4) Methods of harvesting timber under different forest conditions and silvicultural treatments; organization and costs of logging operations. Prerequisite: Senior standing in forestry. Three hours. Turner.

165 Forest Products (2-4) Wood products manufacture and distribution including lumber, veneer and plywood, pulp and paper. Wood preservation. Prerequisite: 162. Three hours. Whitmore.

185 Special Topics Readings, investigations, lectures or work-study projects in selected forest resource areas. Prerequisites: Junior standing and permission. One to three hours. Staff.

197, 198 Senior Research Work on research problem under the direction of a staff member. Findings submitted in written form as prescribed by the department. Prerequisites: Senior standing and permission. Three hours. Staff.

205 Mineral Nutrition of Plants (See Plant and Soil Science 205.) Three hours. Bartlett and botany and forestry staff. Alternate years, 1975-76.

207 Water Relations of Plants Soil-plant water relations. Terminology and measurement of soil-moisture. Absorption, transport, and transpiration by plants. Effects of water excesses and deficits. Prerequisite: Permission. Three hours. Donnelly and botany and plant and soil science staff. Alternate years, 1976-77.

221 Site Relations and Production Dynamics in Forests (2-4) Theory of site relations, methods of study, discussion of current research and its application; total site concepts; dynamics of dry matter production. Prerequisite: Permission. Three hours. Hannah.

222 Advanced Silviculture Scientific bases for selected silvicultural practices. Prerequisite: Permission. Three hours. Staff.

242 Advanced Forest Biometry (2-4) Advanced principles of estimation, prediction, inventory and evaluation of forest resources. Use of system analysis techniques in natural resource management. Prerequisite: 144 or permission. Three hours. Newton. Alternate years, 1976-77.

252 Forest Valuation Principles of valuation of forest land, growing stock, land, and other forest resources. Two hours. Armstrong.
253 Forest Management Decision Theory  Operations research procedures in forest management including wildlife, fire control, insect control, construction projects, and management of conservation programs. Prerequisite: Calculus. Three hours. Armstrong.

Geography

COLLEGE OF ARTS AND SCIENCES

Professors Miles, VanderMeer (Chairman); Associate Professors Barnum, Gade, Leinbach, Lind, Meeks; Assistant Professor McHenry.

Note: The normal introductory sequence is 11, 12 although 14, 12 is a recommended alternative especially for students in economics and business administration.

11 Introduction to Geography  Basic geographic concepts. The cultural diversity among people as it affects the organization and use of the environment. Required of elementary education students. Three hours. I, II. Staff.

12 World Natural Environments  The patterns of man's natural environment with particular attention to land-forms, climate, soil, vegetation and water resources. Three hours. I, II. Staff.

14 Introduction to Economic Geography  Elementary spatial models of economic patterns, processes and relationships. Three hours. Leinbach, VanderMeer.

101 to 109  The regional courses numbered 101 to 109 listed below each concern the character and development of the contemporary cultural, economic, and political patterns of the area against the background of its physical and resource base. Prerequisites: Six hours in the social sciences and sophomore standing. Three hours each.

101 Africa  Miles.
102 Canada  Miles.
103 The Soviet Union  Meeks.
105 Europe  Barnum.
106 Latin America  Gade.
107 The United States  Meeks.
108 China, Korea, and Japan  VanderMeer.
109 Southeast Asia and India  Leinbach.

151 Climatology  Elements of weather and climate, and their interaction with one another to produce world climate patterns. Daily weather analysis to
facilitate understanding of various climatic systems. **Prerequisite:** Sophomore standing. Three hours. Lind.

**161 Remote Sensing of Environment** Geographic analysis and evaluation of aerial imagery produced by remote sensors and its relationship to environmental problems in the social and physical sciences. Laboratory sessions involve earth satellite and aircraft imagery. **Prerequisite:** Sophomore standing or permission of the instructor. Three hours. Lind.

**171 Cartography** Introduction to maps and map preparation, principles of map construction, kinds of information suitable for map presentation, techniques of map drawing, methods of map reproduction, graphs and frequency distributions. **Prerequisite:** Sophomore standing. Three hours. Lind.

**180 Cultural Ecology** (Same as Anthropology 180) Interrelationships of social groups and their natural environments and resource bases, with primary emphasis on non-industrial cultures. Empirical and theoretical materials from hunting-gathering, pastoral and peasant peoples will be examined from the perspectives of anthropology and geography. **Prerequisite:** Anthropology 21 or Geography 11. Three hours. S. Pastner (Anthropology) and Gade.

**193, 194 College Honors**

**195, 196 Special Topics**

**197, 198 Readings and Research**

**201 Historical Geography of the United States** (Same as History 201) The physical setting of the American historical development, emphasizing the sequence of peoples and cultures which have occupied the land and their varied appreciation of its resource base. **Prerequisites:** A course in U.S. history plus 3 additional hours in geography, history, or other social science. Three hours. Miles.

**202, 203 Historical Geography of Europe** (Geography 202 same as History 202) European geography within a framework of past times, the historical development and distribution of settlement, economic and political patterns. **Prerequisite:** Six hours in geography or history. Three hours. Barnum.

**211 Field Geography** Field studies using the state and local area as an outdoor laboratory to indicate lines of geographic inquiry and demonstrate methods and techniques of investigation into the human use of the earth. **Prerequisite:** Six hours in geography. Three hours. Staff.

**216 Biogeography** Processes and patterns of distribution, domestication and human utility of plant and animal species and communities in varying environmental and historical contexts. **Prerequisite:** Nine hours in geography or biology. Three hours. Gade.

**220 Seminar in Environmental Geology** (See Geology 220)

**221 Special Topics in Regional Geography** Specialized study of a particular region or parts thereof. **Prerequisites:** Twelve hours in the social sciences including 3 in geography and departmental permission. Three hours. I, II. Staff.

**231 Resource Geography of the United States** Identification and analysis of the natural regions of the U.S. as they reflect the elements of the physical environment. Emphasis on distributional patterns and resource sig-
nificance. Prerequisite: Six hours in geography including Geography 12. Three hours. Meeks.

233 Regional Planning (See Resource Economics 233)

241 Advanced Physical Geography Patterns and processes in the interactions between the earth, atmosphere, hydrosphere and biosphere; effects of human intervention in environmental systems. Prerequisites: Geography 12 or 151, and advanced courses in geography, geology, or biological sciences; or permission of the instructor. Three hours. Lind.

243 Spatial Analysis I (Same as Resource Economics 243) Analysis of spatial pattern and interaction through quantitative models; introduction to measurement, sampling and covariation in a spatial framework. Prerequisites: Six hours in geography or other social sciences. Three hours. Lind.

244 Spatial Analysis II Probabilistic, normative and multivariate models in analyzing problems of spatial structure and process; emphasis upon spatial diffusion, regional classification and spatial forecasting. Prerequisite: Geography 243. Three hours. Leinbach.

246 Urban Geography An analysis of the morphology and function of cities. Consideration of urban growth and development, methods of classification, distribution, and theories of location. Prerequisites: Geography 11 and three additional hours in the social sciences. Three hours. Barnum.

247 Transportation Flows and Networks Growth, location, and structure of transportation networks; study of spatial flows and linkage patterns, development, and connectivity through analytical, descriptive, and theoretical models. Prerequisite: Six hours in geography or other social sciences. Three hours. Leinbach.

248 Industrial Location and Regional Development Classical and contemporary theories of location and measurement of spatial change. Locational planning in developed and developing areas. Emphasis on problems of regional disequilibrium and growth strategies. Prerequisite: Six hours in geography or other social sciences. Three hours. Leinbach.

249 Agricultural Geography Analysis of world, national, and local rural land use patterns. Landscape elements as they reflect prevailing and historic agricultural patterns. Ecologic and social problems of modern agriculture. Prerequisite: Six hours in geography or other social sciences. Three hours. Meeks, VanderMeer.

251 Advanced Climatology Analysis of regional and local climatic data with special reference to climatic controls; special laboratory projects. Prerequisites: 151 and permission of the instructor. Three hours. Lind.

257 Political Geography (Same as Political Science 257) The political unit as a geographic area. Location, resources, and the distributional relationships of the variety of human factors as they bear on the structure and functioning of the modern political unit. Relationship between geopolitics and political geography. Prerequisites: Six hours in geography and political science. Three hours. Miles.

261 Remote Sensing and Environmental Problems (Same as Geology 219) Research projects in remote sensing; application of multi-spectral data for environmental studies. Prerequisite: 161 or permission of the instructor. Three hours. Lind.
262 Cultural Geography (Same as Anthropology 262) Concepts and theories of cultural ecology, culture area, culture history and the cultural landscape. Prerequisites: 11 and six additional hours in geography, anthropology or other social sciences. Three hours. Gade.

263 Man in Nature An inquiry into the changing conceptions of the earth as the home of man, and the conservative and destructive uses of the physical environment that have resulted from these attitudes. Prerequisite: Three hours of geography. Three hours. Gade.

264 Man, Space and Community Social geography; an interpretation of the social nature of place and the spatial character of social phenomena and groups; origins and dispersals, distributions, boundaries, and territoriality at community, regional and national scales. Prerequisite: Six hours in geography or other social sciences. Three hours. McHenry.

271 Advanced Cartography Special laboratory projects. Prerequisites: 171 and permission of the instructor. Three hours. Barnum.

281 The Nature of Geography The history, philosophy and structure of modern geography. Prerequisite: Twelve hours in geography. Three hours. I. Staff.

295, 296 Seminar Selected topics in geography. Prerequisite: Six hours in geography. Three hours. Staff.

297, 298 Special Topics

Geology

COLLEGE OF ARTS AND SCIENCES

Professors Hunt and Stanley (Chairman); Associate Professors Drake and Wagner; Assistant Professors Bucke, Doolan, and Rhodes.

1 Introductory Geology (3-2) Processes, agents, and their effects on materials, structure, and morphology of Earth's crust. Laboratory includes field trips, study and interpretation of rocks, minerals, and maps. Four hours. Bucke.

25 Elementary Field Geology (1-9) Introduction to problem oriented geologic mapping with emphasis on such environmental problems as water and mineral resources, land usage, and geologic hazards. Prerequisite: None. Four hours. Bucke.

42 Geological Oceanography (3-0) Characteristics and development of oceans, their basins and shorelines. Continental drift and related investigations. Prerequisite: 1 or introductory science course. Three hours. Hunt, Doolan.

51 Environmental Geology (3-0) Environmental topics to include water resources, waste disposal, pollution, land planning and development, highways, rivers, and shorelines. Prerequisite: 1 or introductory courses in science, engineering, or permission of instructor. Three hours. Wagner.

110 Extraterrestrial Geology (3-0) The geology of extraterrestrial bodies, with emphasis on lunar materials and meteorites. Prerequisite: 1. Three hours. Drake.

111 Introductory Mineralogy (2-6) Study of the chemical and physical properties of minerals with special regard to their mode of origin. Laboratory stresses identification of minerals in hand specimen. Prerequisite: 1, 42, or introductory courses in physics, or chemistry. Four hours. Drake.

115 Geomorphology (3-0) Examination and interpretation of landforms resulting from the action of rivers, glaciers, waves, and the wind. Emphasis on processes. Prerequisite: 1 or 51. Three hours. Rhodes.

121 Geologic History of Life (3-0) Survey of the origin, preservation, and diversification of ancient life. The interaction of organisms with their environment and the effect that organisms have had on the evolution of the earth. Prerequisite: 1, 42, or Biology 1, or equivalent. Three hours. Hunt.

132 Intermediate Environmental Geology (3-0) Applications of rock mechanics and structural geology to such environmental problems as earthquakes, slope stability, underground excavation, highway and dam construction and land development. Prerequisite: 1, 51, or introductory courses in physics, chemistry, engineering, or permission of instructor. Three hours. Stanley.

145a, b, c Optical Mineralogy (1-6) A sequence of three units of mini-courses studying the optical properties of minerals: 145a the petrographic microscope and the immersion method, 145b behavior of light in isotropic and anisotropic media, 145c special techniques; spindle stage, universal stage and double variation methods. Students may enroll in from one to three units for one credit each. Prerequisites: 111 (may be taken concurrently) for 145a, 145a for 145b, and 145b for 145c. One to three credits. Doolan.

155 Sedimentary Petrology (1-6) Origin, identification, and basis for classification of sedimentary rocks, with emphasis on interpretation of depositional and post-depositional environments. Prerequisite: 111. Three hours. Bucke.

156 Igneous and Metamorphic Petrology (2-3) The origin and analysis of igneous and metamorphic rocks. Laboratory stresses modern approaches to petrologic problems. Prerequisite: 145. Four hours. Doolan.

166 Structural Geology (3-3) Rock deformation, description, and geometry of structural types, and the interpretation of structures of all sizes in terms of finite strain and causal stress fields. Prerequisite: 1, or 42, 51, 132, or Physics 16, 25, or C.E. 100, 180. Four hours. Stanley.

180 Soil Mechanics (See Civil Engineering 180) Four hours. Olson.

193, 194 College Honors

195, 196 Special Topics

197, 198 Research in Geology (0-2) Supervised research and readings in a selected field of geology. Students from the allied sciences, mathematics, and engineering may elect a research problem that combines their major field of study and geology. Prerequisite: Consultation with the staff. Three hours.

211, 212 Seminar in Sedimentary Processes (3-0) Selected readings on the origin and interpretation of sedimentary deposits. Topics will
include mechanics of transportation and deposition, interpretation of surface textures, methods of statistical analysis, geomorphology of sedimentary environments. **Prerequisites:** 115, 155. Three hours. Bucke, Hunt, Rhodes.

**216  Glacial Geology (2-3)** The Quaternary history of North America with emphasis on the origin, mechanics, and effects of past and present glaciations. **Prerequisite:** Junior standing or above. Three hours. Wagner.

**218  Hydrogeology (3-0)** The origin, occurrence, movement, and character of ground water. **Prerequisite:** Junior standing or above. Three hours. Rhodes. Alternate years.

**219  Remote Sensing of the Environment (See Geography 261)** Three hours. Lind.

**220  Seminar in Environmental Geology (2-3)** Consideration of environmental problems in Vermont, New England, and elsewhere with emphasis on the geological role in the solution of these problems. **Prerequisite:** 51, 132, or permission of instructor. Three hours. Staff.

**221  Soil Classification and Land Use (See Plant and Soil Science 261)** Three hours. Bartlett.

**223  Environmental Geology Actions Studies** Study of environmental problems. Emphasis is given to project selection, investigation methods, actual investigation, and constructive implementation of findings for maximum social benefit. **Prerequisite:** Permission of instructor. Offered during summers. Three to six hours. Wagner.

**225  Advanced Structural Geology (3-0)** Selected topics in analytical structure. **Prerequisite:** 166. Three hours. Stanley.

**227  Structural Petrology (3-0)** Elastic and ductile behavior of rocks. Fracture phenomena and analysis. Stress and strain interpretation of deformational features in rocks and minerals. **Prerequisites:** 66 and 145. Three hours. Stanley.

**238  Field Geology (1-6)** Field mapping in western Vermont. Methods of analysis of field data. Geological reports. Held in late summer. **Prerequisite:** 166 or departmental permission. Four hours. Stanley.

**240  Plate Tectonics (3-0)** Development and current status of plate tectonic concepts with applications to selected parts of the globe. **Prerequisites:** 156 or 166, permission of instructor. Three hours. Stanley.

**242  Regional Geology (4-0)** Geology of selected parts of the North American continent: course includes a four week summer field trip that illustrates the salient features of the region in question. **Prerequisite:** Junior standing in geology. Four hours. Staff.

**245  Geology of New England (3-0)** **Prerequisites:** 166, or 155, 156, or 277. Three hours. Stanley.

**250  Advanced Mineralogy (2-3)** Crystallographic, chemical, and physical properties of the common rock forming minerals. Laboratory stresses techniques of mineral identification and analysis of mineral assemblages. **Prerequisite:** 111. Three hours. Drake.

**252  Clay Mineralogy** The structure, composition, properties, occur-
rence, origin, distribution, and environmental significance of the various clay minerals. Laboratory techniques in identification of clay minerals and measurement of their physical and chemical parameters. **Prerequisite:** Permission of instructor. Three hours. Bucke.

**253 Phase Equilibrium in Mineral Assemblages (2-3)** The application of thermodynamics and graphical methods to analysis of multicomponent, polyphase systems of mineralogical interest. **Prerequisite:** 250, or 156, or permission of instructor. Three hours. Drake.

**254 Geochemistry (3-0)** The application of basic concepts in chemistry to geological problems, including solution geochemistry, weathering, mineral paragenesis, and the effects of pressure and temperature. **Prerequisite:** 250, or 155, or 156, or permission of instructor. Three hours. Drake.

**262, 263 Seminar in Petrology (3-0)** Modern concepts of the evolution of igneous and metamorphic rocks. Emphasis directed toward application of petrologic concepts to interpretation of earth history and tectonophysics. **Prerequisite:** 156 or equivalent. Three hours. Doolan.

**270 Invertebrate Palontology (2-3)** Classification, geological distribution, evolution, paleoecology, and morphology of major invertebrate fossil groups. **Prerequisites:** 121, Biology 1, or equivalent. Three hours. Hunt.

**272 Recent Sedimentation (1-6)** Investigation of recent sedimentary environments using geolimnological and oceanographic techniques. Group and individual projects. Field oriented with use of the University research boats. **Prerequisites:** 155 or 42 and permission of instructor. Three hours. Hunt.

**277 Stratigraphy (2-2)** Study and interpretation of development and distribution of sedimentary rocks. **Prerequisite:** 155. Three hours. Bucke.

**291 Seminar in Geology** Selected topics of current interest. **Prerequisite:** Senior or graduate standing. One to three hours. Staff.

---

**German**

**COLLEGE OF ARTS AND SCIENCES**

*Professor Kahn (Acting Chairman); Associate Professors Mieder and Richel; Assistant Professors Allen and Scrase.*

**1-2 Elementary German** Four hours. Staff.

**11, 12 Intermediate German** Literature and Discussion of selected prose with review of grammar. **Prerequisites:** 1-2 or equivalent for 11; 11 for 12. Three hours. Staff.

**13, 14 Intermediate German** Composition and Conversation. Guided conversation, discussion and written work leading to free composition and oral presentations. Grammar review. **Prerequisites:** 1-2 or equivalent for 13; 13 or 11 for 14. Three hours. Staff.

**15, 16 Intermediate German** Introduction to Technical German. Reading technical expository prose of moderate difficulty. Emphasis on developing fluency in reading types of prose useful for graduate work and research in the humanities and sciences. **Prerequisites:** 1-2 or equivalent; 15 for 16. Three hours. Staff.
101, 102 **Introduction to German Literature** Survey of German literature from the beginnings to the twentieth century. *Prerequisite:* 12 or 14 or equivalent. Three hours. Richel, Scrase.

121, 122 **Composition and Conversation** Emphasis on increasing oral and written command of the language. Class discussions focus on German history and culture. *Prerequisite:* 12 or 14 or equivalent. Three hours. Allen, Scrase.

193, 194 **College Honors**

195, 196 **Special Topics** Advanced study in accordance with students' needs and interests. *Prerequisites:* 101, 102 or the equivalent and departmental permission. Three hours. Staff.

197, 198 **Readings and Research**

201 **Proseminar: Methods of Research and Bibliography** An introduction to tools and methods of research. *Prerequisite:* 101 or equivalent. One hour. Mieder.

203 **Development of German Intellectual Movements** A comprehensive survey of the history of ideas as a framework for the study of German literature. *Prerequisite:* 101, 102 or equivalent. Three hours. Allen. Alternate years, 1976-77.

204 **Courtly Epic and Minnesang** Cultural background and major works of medieval classicism. *Prerequisite:* 101, 102 or equivalent. Three hours. Mieder. Alternate years, 1976-77.

205, 206 **Goethe and Schiller and Their Time** Origin, development, characteristics and criticism of German Classicism. *Prerequisite:* 101, 102 or equivalent. Three hours. Richel, Scrase. Alternate years, 1977-78.

207 **Nineteenth-Century Prose** Narrative prose of representative authors such as Kleist, Droste-Hülshoff, Stifter, Storm and Keller. *Prerequisite:* 101, 102 or equivalent. Three hours. Mieder. Alternate years, 1976-77.

209, 210 **The Twentieth Century** Selected works in poetry, prose and drama by Brecht, George, Hauptmann, Hofmannsthal, Kafka, Thomas Mann, Rilke and others. *Prerequisite:* 101, 102 or equivalent. Three hours. Allen, Scrase. Alternate years, 1977-78.

221, 222 **Advanced Composition and Conversation** Oral and written practice in German of advanced difficulty with emphasis on stylistics. *Prerequisite:* 121, 122 or equivalent. Three hours. Mieder.

232 **History of the German Language** Historical linguistic development of the German language from earliest times to the present. No knowledge of the older stages of the language is presupposed or required. *Prerequisite:* 121, 122 or equivalent. Three hours. Mieder. Alternate years, 1977-78.

281, 282 **Senior Seminar** Readings and research. Required of all senior concentrators. Three hours.
HEBREW

General Literature

161, 162 German Literature in Translation See course description under Extra-Departmental Courses, page 211.

Hebrew

COLLEGE OF ARTS AND SCIENCES
Professor Kahn.

1-2 Elementary Hebrew The spoken language of everyday use with oral, aural and written practice in speaking, reading, and comprehension. Four hours. Staff.

11, 12 Intermediate Hebrew Reading, translation, and discussion in Hebrew of texts selected to show the development of Hebrew culture from Biblical times to the present. Three hours. Staff.

History

COLLEGE OF ARTS AND SCIENCES
Professors Bliss, Daniels, Davison, Evans (Emeritus), J. Felt, Hand, Metcalfe, Muller, Rollins, Schmokel, Schultz, Spinner (Director of Graduate Studies), and Stout; Associate Professors Andrea, Hutton, Overfield, Seybolt, Steffens, Stoler, and True; Assistant Professors Jackson and Baskerville; Instructors K. Felt and Kulczycki; Lecturers Engroff and Liebs; Adjunct Professor Morrissey.

Courses numbered 100 to 199 generally require sophomore standing but may be open to freshmen by permission of the instructor. Courses numbered 200 to 299 require six hours of appropriate work in history or a related subject.

1, 2 Major Civilizations An introductory survey of major world civilizations. First semester: Ancient, medieval, and non-European civilizations; second semester: The emergence of modern world civilization from European roots. Three hours. Staff.

3 The Study of History An introduction to the methods of studying the past. Use of the works of major historians as a means of investigating the ways in which historians think and write history. Three hours. Staff.

9 Ancient Mediterranean Civilization A detailed study of Athens in the 5th century B.C. continuing to the rise of Rome through the 1st century A.D. (Students who have already taken History 106 may not take History 9.) Three hours. Bliss, Staff.

10 Medieval European Civilization This course, designed for persons with no prior knowledge of medieval history, surveys the development of The First Europe, 300-1500. Three hours. Andrea.

11 European Civilization to 1815 An introduction to the political, social, and intellectual movements which have shaped the foundations of western civilization: from the Renaissance to the French Revolution. Three hours. Staff.
12 European Civilization, 1815 to 1945 A survey emphasizing the ideas and institutions which have helped shape western society and culture from the Napoleonic Era to the end of the Second World War. Three hours. Staff.

23, 24 History of the United States Survey from the pre-Revolutionary period to the present. Three hours. Staff.

51, 52 World History Since 1945 First semester, the Soviet Union, Eastern Europe, Western Europe, and the United States; second semester, Asia, Africa, and Latin America. Three hours. Spinner.

61, 62 History of Science A survey of the history of the physical and biological sciences from antiquity to the present. The course will stress science as an intellectual activity, within the contemporary context of philosophy, religion and social organization. Three hours. Steffens.

73 Traditional Chinese Civilization An historical examination of the thought, social structure, politics, economics, science, literature, art and music of traditional China. (No prerequisites) Three hours. Seybolt.

74 History of Japan A survey of Japanese political, social, economic and aesthetic thought and institutions from 600 A.D. to the present. Three hours. Seybolt.

105 Archaeology and History of the Ancient Near East Survey of the primary civilizations of Egypt and Mesopotamia and the secondary cultures of Anatolia, Syria-Palestine, Assyria, and Iran, with major emphasis on the archaeological evidence. Three hours. Davison.

106 History of Greece Survey of the history of ancient Greece from prehistoric times (with special emphasis on the Minoan and Mycenaean cultures) to the Hellenistic Age. Three hours. Davison.

107 History of Rome Survey of the history of ancient Italy from prehistoric times (with special emphasis on the Italic peoples, the Etruscans, and Greek colonization) to the age of Justinian. Three hours. Davison.

113, 114 Canadian History Canadian development from the French exploration and settlement to the present; evolution of self-government and relations with the United States; historical foundations of the problems of biculturalism. Three hours. Metcalfe, Baskerville.

115, 116 African History Survey of the history of Africa south of the Sahara, from earliest times to independence. First semester: to 1880; second semester: 1880 to the present. Three hours. Schmokel.

117 Rise of Islam Arab/Islamic civilization during its formative period, from the 6th through the 13th centuries A.D. Three hours. Engroff.

118 The Modern Middle East Major historical developments in the Middle East from the late 18th century to the present. Three hours. Engroff.

123 American History Since 1945 A topical review of United States history since 1945 with special emphasis upon the problems of interpreting and reconstructing the recent past. Three hours. Hand.

125 Black History Economic, social, political, and intellectual develop-
ments in U. S. history as they have affected and been affected by the Black
American; emphasis on the period since 1865. Three hours. Staff.

127 History of Women in the United States Special emphasis on
the women's movements of the 19th and 20th centuries and on the relationships
among them. Prerequisites: Sophomore standing and 3 hours in history. Three
hours. K. Felt.

140 Biography Readings in the history and criticism of biography, the
role of the individual in history, and biographies of individuals. Three hours.
Schultz.

First semester: Middle Ages and Tudor-Stuart; second semester: 1715 to the
present. Three hours. Metcalfe and Spinner. (Offered 1975-76 and alternate
years)

161 Vermont History A survey of Vermont history from early times
to the present. Three hours. Muller.

179 Special Methods in Secondary Education for the Social
Studies (Same as Education 179) Social studies curricula and selected social
studies topics. (Not acceptable toward fulfilling Arts and Science College major
requirements.) Prerequisite: Acceptance in teacher education program. Three
hours. True.

181 U.S. Military History The development of the American Military
Establishment within the framework of American history from the Colonial era
to the present. Three hours. Stoler, Stout.

193, 194 College Honors
195, 196 Special Topics

197, 198 Readings and Research An individual instructor may
prescribe prerequisites for History 197, 198.

201 Historical Geography of the United States (Same as Geog­
raphy 201)

202 Historical Geography of Europe (Same as Geography 202)

203 Latin American History The Spanish Empire in America in­
cluding the Indian heritage, the conquest, economic, social and political trends
within the empire, and the struggles for independence. Reading knowledge of
Spanish strongly recommended. Three hours. True. (Alternate years, spring
semester)

205 History of Mexico Reading knowledge of Spanish strongly recom­
manded. Three hours. True. (Alternate years, spring semester)

207 The Early Middle Ages Western Europe from the late Roman

208 The High Middle Ages Western Europe, 1000-1300. Three hours.
Andrea.

211 The Renaissance European society from the fourteenth to early
sixteenth century, emphasizing the transition from medieval to "modern" society and the roots of Renaissance Italy’s cultural and artistic brilliance. Three
hours. Overfield.
212 The Reformation European society from the Renaissance to mid-seventeenth century. Emphasis on the religious struggles growing out of the Protestant Reformation and their impact on the social, political, economic and cultural movements of the era. Three hours. Overfield.

216 French Canada A history of the French experience in North America from 1867 to the present. Ability to read in French a decided asset. Prerequisite: 113, 114, or concurrent enrollment in same. Three hours. Baskerville.

221 The American Colonies 1607-1763 Three hours. Stout.

222 The American Revolution 1763-1790 Three hours. Stout.

223 (Art 283) Architecture and the Environment An introduction to the basic skills necessary to preserve, document, and re-use America's visible past, its architectural heritage. Students will do projects in actual preservation problems in Vermont. Three hours. Liebs.

230 Philosophy of History (Same as Philosophy 230) An investigation of the theories of history from the perspectives of both historians and philosophers. Three hours. Steffens.

231, 232 French History First semester: Seventeenth century to 1815; second semester: 1815 to the present. Three hours. Hutton. (Offered 1976-77 and alternate years)

233, 234 German History First semester: Seventeenth century to 1850; second semester: 1850 to the present. Three hours. Schmokel. (Offered 1977-78 and alternate years)

235, 236 Intellectual History of Modern Europe Emphasis upon ideas in their relation to major political and social movements. First semester: Humanism, the Scientific Revolution, and the Enlightenment (1500-1800); second semester: the Modern Era. Three hours. Hutton, Overfield.

240 American Biography Investigation and portrayal of personalities; the uses of biography in the study of American history. Subjects selected to represent a variety of vocations and aspects of history. Three hours. Schultz.

243 Soviet Russia The USSR from the Revolution of 1917 to the present. Three hours. Daniels.

244 Imperial Russia History of Russia from the Middle Ages to the Revolution of 1917. Three hours. Daniels.

253 Tudor-Stuart England England from 1485 to 1660, with particular emphasis on the central period from the 1530's to the 1640's (the Henrician Reformation to the Revolution). Three hours. Metcalfe. (Offered 1976-77 and alternate years)

254 Victorian England Selected topics in the 19th century English history with emphasis on "industry and empire," changing class relationships, and the growth and development of political parties. Three hours. Spinner. (Offered 1976-77 and alternate years)

Home Economics

SCHOOL OF HOME ECONOMICS

Professors Betsinger (Director), Grams; Associate Professors Atwood, Caldwell, Knowles, Livak,1 Powell, Webster; Assistant Professors Barbour, J. Emanuel, Goldhaber, Jameson, Schlenker, Shelton, Soule, and Tyzbir; Instructor F. Emanuel;2 Lecturers Brower, Lawler, Lawton, Miller, Osborn, Peterson, and Schiller; Adjunct Associate Professor Merrow; Adjunct Professor Prior; Affiliated Faculty: Assistant Professor Rathbone.

1 On leave Fall 1976.
2 Part-time.

1 Home Economics in the Land-Grant College Teaching, research, and extension. Historical development of field, its common core of family and individual, professional opportunities which are available. One hour. Staff.

90 Integrated Seminar in Home Economics Selected topics dealing with contemporary human concerns. Emphasis on understanding the interrelationships between the various basic disciplines and major program areas in the school. Three hours. Staff.

Program in Clothing, Textiles, and Design

15 Design (1-4) Color and design in theory and practice. Work with various media for creative expression and understanding of art principles. Three hours. I, II. Atwood, Caldwell.

16 Visual design (1-4) Visual elements of design related to various areas of interest. Two and three dimensional categories. Emphasis on sketching. Prerequisite: 15. Three hours. Peterson.

22 Clothing Concepts and Techniques I (1-4) Basic concepts and skills related to clothing construction. Fabric selection, pattern alteration, and garment construction to meet individual needs. Three hours. Caldwell, Staff.

23 Clothing Concepts and Techniques II (1-4) Advanced construction with emphasis on pattern alteration. Techniques used with fabrics which require special handling. Includes current fashion, fabric and related product developments. Prerequisite: 22 or instructor approval based on a pre-test. Three hours. Lawler.

25 Clothing, Textiles, and Design Seminar An integrated look at the professional aspects of Clothing, Textiles and Design. All students in the program enroll for one credit per year. Prerequisite: Clothing, Textiles and Design majors. Maximum of 4 credits. Staff.

26 Seminar Planning Student committee to schedule and plan seminars, i.e., correspondence with people in the industry, receptions, attendance, critiques. A student may enroll twice for this course. Prerequisite: Junior or senior in Clothing, Textiles and Design. One hour. Peterson.

107 Fashion design (1-4) Application of design fundamentals and
principles to fashion planning. Techniques of fashion illustration. Prerequisites: 15, 16. Three hours. Peterson.

114 Weaving: Spinning and Hand Techniques (1-4) An introduction to spinning and weaving with emphasis on hand methods as practiced in past and present cultures. Prerequisite: A course in design. Three credits. Atwood.

115 Textile Design (1-4) Application of design elements and principles to processes of textile design. The Shelburne Museum collection will provide resources for research. Prerequisites: 15, 20; or Art 10 and departmental permission. Three hours. Atwood.

116 Weaving (1-4) Practical application of design fundamentals in the creation of woven textiles. Shelburne Museum collection available for study. Prerequisites: 15, 20; or Art 10 and departmental permission. Three hours. Atwood.

117 History of Costume (2-2) History of costume stressing the background, philosophy and events of each period as reflected in dress. Prerequisites: Art 5, 6. Three hours. Caldwell.

118 History of Textiles (3-0) Textiles throughout history. Design, production and uses in various periods and societies. Geographic, economic and cultural implications. Prerequisite: 20 or permission of instructor. Three hours. Caldwell.

122 Pattern Design (2-4) Techniques of designing and altering flat patterns. Advanced construction techniques, altering flat pattern and emphasis on original design. Prerequisite: 23. Three hours. I, II. Webster.

125, 126 Fashion Merchandising I & II (2-1) Survey of American fashion retailing with emphasis on industry, merchandise management, sales promotion, career opportunities and current retail technological developments. Prerequisites: Economics 11 and/or 12, and 125 for 126. Three hours. Peterson.

217 American Textiles and Fashion: Two Centuries — 18th Century to 1910 Study of home production of textiles, needle art and clothing in collections at Shelburne Museum. Lectures, demonstrations and laboratory experience. Prerequisite: Six hours in design and/or textiles, or permission of instructors. Three hours. Atwood, Caldwell.

221 Costume Design and Draping (1-4) Draping techniques in creative fashion design. Handling of fabrics in relation to line in dress. Original projects. Prerequisites: 15, 122. Three hours. Webster.

223 Tailoring (2-4) Construction techniques with emphasis on tailoring problems. Prerequisite: 122. Three hours. Webster.

229 Clothing, Textiles and Related Art Seminar Theory and research in Clothing, Textiles and Related Art, analysis of current problems; review and discussion of recent publications; individual studies. Prerequisites: 17, 253 or 221. Three hours. Staff.
231 Advanced Clothing Workshop and Seminar (2-4) Individual projects using all possible methods of clothing design. Independent laboratory work. Emphasis on management, planning, new techniques, production, evaluation. Prerequisites: 123, 221. Three hours. Webster.

Program in Early Childhood and Human Development

60-61 The Context of Human Development The impact of the family, community, and various agencies, systems and conditions within society upon the developing individual. Three to four hours. Barbour, Jameson.

62 Adolescent Development Physical growth, physiological, psychological, and social development in adolescence. Emphasis on interrelationships of these processes and the developing personality. Prerequisites: Sophomore standing. Three hours. Shelton.

63 Child Development The biological, psychological, and social growth and development of the child and his relationships with his family, peers and institutions. Prerequisites: Sophomore standing and Psychology 1. Three hours. Jameson, Shelton, Goldhaber.

64 Maturing and Aging Physical change, physiological, psychological, social development during the maturing years and older age. Interrelationships between these processes will be stressed. Prerequisites: Sophomore standing, Psychology 1. Three hours. Grams.

65 Human Relationships and Sexuality Sexual responsibility and the biological, social, psychological growth and development of human beings in terms of sex role identity. Three hours. Grams, Gray, Staff.

69 Freshman Program Seminar First half of the two year program in which the advisor and his students meet to discuss contemporary issues in human development and early childhood. Students may enroll twice in this course. Two hours. Staff.

80-81 Human Development A two semester comprehensive survey of development across the life cycle. Three hours lecture and one hour optional discussion each semester. Prerequisites: Psychology 1 and Sophomore standing. Six to eight hours. Goldhaber, Shelton, Staff.

82 Creative Curriculum Activities for the Early Childhood Years I Planning interdisciplinary program materials for children on an individual and group basis using movement, graphic, plastic, language arts. Prerequisite: Permission of instructor. Three hours. Jameson.

83 Creative Curriculum Activities for the Early Childhood Years II (2-2) Planning interdisciplinary program materials for children on an individual and group basis emphasizing mathematics, the natural ecology, and general sciences. Prerequisites: 82 in preceding semester or permission of instructor. Three hours. Jameson.

163 The Emerging Family Development of parents and children in various stages of the family life cycle and various emerging family forms. Prerequisite: Sophomore standing. Three hours. Jameson, Staff.

164 Parent-Child Relations Interpersonal relations of adults and children and the application of underlying principles in parent education and family consulting. Prerequisite: 63 or consent of instructor. Three hours. Grams.
169 Sophomore Program Seminar  An ongoing seminar for Human Development majors. Readings; study and discussion of current issues, research, publications and professional affairs. Prerequisites: Sophomore standing, Early Childhood and Human Development Major. A student may enroll twice in this course. Two hours. Staff.

184 Early Childhood Programs (3-0) An active examination of present day early childhood programs in relationship to their historical development from early history. Three hours. Staff.

187 Field Practicum Supervised teaching in accredited early childhood facilities licensed or approved by responsible boards. Prerequisite: Permission of instructor. Eight hours. Jameson.

188 Prepracticum Internship Administration and planning for an early childhood development center. Prerequisite: Early Childhood Major. Two hours. Staff.

189 Early Childhood Practices Supervised planning and conducting the early childhood laboratory center integrated with readings and research, advanced child development seminar and curriculum workshop. Prerequisite: Permission of instructor. Fifteen hours. Brower, Lawton, Staff.

261 International Programs in Early Childhood Development An examination of the practices and interrelated services in the field of early childhood in several countries. Prerequisite: 184, or equivalent. Three hours. Staff.

264 Contemporary Issues in Parenting Contemporary cultural factors that influence adult lifestyles and their relationship to successful parenting. Prerequisite: Nine hours in Human Development or permission of instructor. Three hours. Goldhaber, Jameson.

265 Family Life and Sex Education in School and Community Methods, materials and philosophy of family life and sex education in the schools. Prerequisites: 65, Senior standing and consent of instructor. Three hours. Grams.

266 Seminar in Human Development Intensive study of issues in human development and their application in a wide variety of professional areas. May be taken more than once up to a maximum of 12 credits. Prerequisites: Junior standing, nine hours of Human Development or equivalent. Three hours. Staff.

281 Infancy Development and rearing from conception to eighteen months and the relationship to subsequent development. Prerequisites: Nine hours in human development, nutrition, and physiology or biology or permission of instructor. Three hours. Shelton.

Field Experience, Seminars, Special Topics and Research

97, 197, 297 Mini-Course Short courses dealing with limited topics offered in various disciplines in home economics. Enrollment may be more than once. Prerequisite: Varies with course. One hour. Staff.

195 Special Topics Lectures, laboratories, readings or projects relating to contemporary areas of study. Enrollment may be more than once, accumulation up to twelve hours. Prerequisite: Varies with course. Staff.
290 Introduction to Research  Research procedures with lectures and discussions of problem selection, objectives, bibliographical techniques, and analysis of data. Two hours. Tyzbir.

291 Special Problems  Reading, discussion, and special field and/or laboratory investigations. Prerequisite: Departmental permission. Students may enroll more than once for a maximum of twelve hours. One-Six hours. Staff.

295 Special Topics  Lectures, laboratories, readings or projects relating to contemporary areas of study. Enrollment may be more than once; accumulation up to twelve hours. Prerequisite: Departmental permission. Staff.

296 Field Experience  Professionally oriented field experience under joint supervision by faculty and business or community representative, credit arranged up to fifteen hours. Prerequisite: Departmental permission. Staff.

Program in Home Economics Education and Consumer Economics

Consumer Economics

56 Personal Resource Management  Application of the management process to decision-making procedures for individuals and/or families in the use of human and financial resources to achieve desired goals. Three hours. Schiller.

158 Consumer Problems  The consumer interest in relation to other segments of our economy, society and polity including buyer-seller relationships and sources of consumer information and protection. Prerequisite: Sophomore standing. Three hours. Schiller.

258 Personal and Family Finance  The role of money and its management in planning, controlling and evaluating income, expenditures, investments and debts. Alternatives in relation to goals. Prerequisites: 56; Economics 11. Three hours. Schiller.

259 Field Experience in Personal Resource Management  Application of economic, sociological, and efficiency principles to better manage personal and/or family resources, including time, energy, money and talents, in the home and the community. Prerequisites: 56, 158, 258 or permission of instructor. Three hours. Schiller.

Home Economics Education

71 Introduction to Home Economics Education  Careers in home economics education, contemporary programs, professional and youth organizations, and resources. Independent study, field trips, experiences in teaching. Prerequisite: Sophomore standing. Three hours. Osborn.

171 Methods of Teaching  Three week concentrated course emphasizing teacher competencies in home economics. Planning, executing and evaluating instruction; management; guidance; school-community relations; professional development. Prerequisites: 71; Psychology 1. Three hours. Miller, Osborn.

172 Student Teaching  Supervised observation and teaching in approved home economics programs in Vermont schools. Prerequisite: 171. Seven hours. Barbour, Miller, Osborn.

173 Communication Methods  Presentation of information through the media of press, radio and television, and lecture-demonstration. Prerequisite: Junior standing. Three hours. I. Osborn, Staff.
174 Extension Experience Seven weeks off campus supervised jointly by extension and resident faculty. Prerequisites: 173 and Votec 112. Seven hours. Miller, Osborn.

175 Special Problems in Home Economics Education Individual investigation of a problem selected to meet special needs of students. Students may accumulate up to six hours. Prerequisites: 71 and permission of instructors. Two or three hours. Miller, Osborn.

177 Teaching Special Groups Independent study and teaching experience in home economics programs designed for adult, occupational and/or elementary classes. Prerequisite: 171. Students may enroll more than once for a maximum of three hours in each area or nine hours total. Miller, Osborn.

272 Teaching Adults Organization and teaching of classes in home economics to meet the needs of adults; supervised experience in teaching adults. Prerequisite: 171, or permission of instructor. Two hours. Staff.

273 Occupational Education (2-3) Role of the home economics teacher in organizing and implementing wage earning educational units at the secondary school level. Prerequisite: 171, or experience in secondary home economics education. Three hours. Staff.

274 Home Economics in Elementary and Middle Schools Home Economics, an integral part of curriculum, grades one through eight. Observations of children in these grades. Participation in schools. Prerequisites: 63, 71.

Three hours. Staff.

Program in Housing and Residential Environment

50 Architectural Drawing (1-4) Basic understanding of architectural and construction methods and drawing. Three hours. Alexander.

51 Family Housing Selection A study of the problems involved in selecting living environments for families including site location, financing, structure and space design. Three hours. Knowles.

52 Socio-Economic Aspects of Housing The housing needs of families including low income, elderly, physically handicapped and minority groups; programs devised to aid housing problems. Three hours. Knowles.

150 Home Furnishing Techniques (3-0) Principles and skills involved in redesigning and rehabilitating upholstered furniture. Three hours. Staff.

151 House Planning (1-4) An advanced study of housing design to meet family requirements, application of home management principles. Prerequisite: 50, 51. Three hours. Knowles.

152 Housing and the Community (3-0) A humanistic study of the role housing plays in land-use planning. Neighborhood and community planning related to family life styles. Prerequisite: 51 or 52 or permission of instructor. Three hours. Staff.

154 Household Equipment (2-2) Application of scientific principles to the selection, operation and care of household equipment. Three hours. Knowles.
155 Experimental Equipment (1-4) Performance measurement and rating of household equipment. **Prerequisite:** 154. Three hours. Knowles.

159 Interior Design I (1-4) Application of design fundamentals to the problems involved in furnishing the home. **Prerequisite:** 15 (and 16 for Design majors). Three hours. Caldwell.

251 Advanced Housing Investigation of housing data and current problems including studies of environmental factors, technological developments and governmental programs. **Prerequisites:** 51, Economics 12 and Sociology 21. Three hours. Knowles.

253 Interior Design II (1-4) Interior design; period furnishing, its present use and influence upon modern furnishing. **Prerequisite:** 159. Three hours. Caldwell.

Program in Human Nutrition and Foods

37 Basic Concepts of Foods (2-2) Basic principles of food purchasing and preparation presented through demonstration, lecture and laboratory participation. I, II. Three hours. Soule, Staff.

40 Basic Concepts of Contemporary Nutrition (3-0) Basic concepts of nutrition with special emphasis on problem-solving as it relates to contemporary nutrition. Three hours. I, II. Livak.

43 Fundamentals of Nutrition (See Animal Sciences 43) Three hours. Carew. Credit will not be given for both 43 and 141.

46 Man and Nutrition Nutritional implications in growth, development and performance throughout the life cycle emphasizing interrelationships with social, cultural and economic factors. Designed for students in dental hygiene, education, human development, and technical nursing. Three hours. Staff.

135 Advanced Food Preparation (2-4) Scientific principles and processes underlying food preparation and preservation. **Prerequisites:** 37 and a course in organic chemistry or equivalent. Four hours. I, II. Livak.

137 Meal Management (1-5) Principles and practice in planning, preparing and serving family meals. **Prerequisites:** 37 and a college course in nutrition. Three hours. I, II. Soule.

138 Quantity Food Production and Service (3-4) Application of principles and techniques of food production and service in different establishments including equipment, sanitation, and time-motion studies. **Prerequisite:** 137. Five hours. F. Emanuel.

139 Institutional Purchasing and Food Cost Control (3-0) Principles of institutional purchasing, accounting, food cost control, and menu planning. **Prerequisite:** 137. Three hours. F. Emanuel.

141 Nutrition and Health (3-0) Basic principles of nutrition. Nutrient content of foods. Practice in recording and evaluating dietary intake of individuals. **Prerequisites:** Chemistry 4 or 16 and Zoology 5. Three hours. Powell. Credit will not be given for both 43 and 141.

144 Applied Normal Nutrition (2-2) Nutritional needs of individuals during the life-cycle. Physiological and environmental factors which affect
nutritional status. Designed for nutrition majors. *Prerequisites:* 43 or 141, Chemistry 4 or 16 and Physiology. Three hours. Powell.

145 Clinical Nutrition (1-4) Students are assigned to a variety of approved clinical centers for supervised observation and participation. Students may enroll in this course twice. *Prerequisites:* Junior standing; dietetics majors. Three hours. Staff.

148 Community Involvement-Nutrition and Food Focus on effectively relating community experiences with academic theory in the field of multidisciplinary nutrition. *Prerequisites:* College course in nutrition and departmental permission. Three hours. Staff.

232 Computer in Food Service (3-0) An orientation to the use of the computer as an administrative tool in dietetics and food service management. *Prerequisite:* 138. Three hours. Merrow.

235 Recent Advances in Foods and Nutrition Interpretation, application and communication of trends in foods and nutrition as evidenced through literature and research. May be taken more than once for a maximum of twelve hours. *Prerequisites:* Junior standing, twelve hours in foods and nutrition and permission of instructor. Three hours. Staff.

236 Introduction to Food Research (1-4) Methods and techniques in experimental work in foods. Independent laboratory study of problems in food preparation. *Prerequisite:* 135. Three hours. Livak, Staff.

237 Readings in Foods Critical survey of the literature on the recent developments in food research. *Prerequisites:* Senior standing; 135. Two or three hours. Staff.

238 World Dietary Problems (3-0) A background for understanding the causes of under-nutrition, the magnitude of the problem, and the programs seeking workable solutions. *Prerequisite:* Six credits in nutrition or departmental permission. Three hours. Staff.

239 Institutional Organization and Management (3-0) Institutional organization and management; personnel policies; laws and regulations; promotion and advertising. *Prerequisite:* 138, 139, or equivalent. Three hours. F. Emanuel.

240 Methods in Nutrition Education (3-0) Problems common to nutrition education in schools, hospitals and community. Individual investigations selected to meet special needs. *Prerequisite:* 43 or 141. Three hours, Soule.

242 Advanced Nutrition (3-0) A study of nutrients and their specific functions in metabolic processes. *Prerequisites:* 43 or equivalent and a course in biochemistry and physiology. Three hours. Tyzbir.

245 Nutritional Biochemistry I (3-0) Comprehensive study of metabolism of carbohydrates, lipids, and protein with emphasis on hormonal control, nutritional and metabolic interrelationships and dietary abnormalities (e.g. starvation and obesity). *Prerequisites:* 242 and permission of instructor. Three hours. Tyzbir.

246 Nutritional Biochemistry II (3-0) Comprehensive study of chemistry and biochemical function of vitamins, vitamin-like compounds, minerals, and trace elements with emphasis on metabolic function. *Prerequisites:* 242 and permission of instructor. Three hours. Tyzbir.
247 Diet Therapy (4-0) Adaptations of the normal diet in conditions affected by or affecting the utilization of food. Prerequisites: 242 and permission of instructor. Four hours. Powell.

248 Readings in Nutrition Critical survey of the literature on recent developments in nutrition. Prerequisite: 242 or departmental permission. Two or three hours. Staff.

249 Nutrition Seminar A review of recent developments in nutrition research. Prerequisites: Advanced nutrition courses and permission of instructor. Three hours. Tyzbir.

294 History of Nutrition Foremost investigators and methods involved in the development of present day nutritional knowledge. Prerequisite: Three hours of nutrition. One hour. Staff.

Mathematics

COLLEGE OF ENGINEERING, MATHEMATICS AND BUSINESS ADMINISTRATION

Professors Schoonmaker (Chairman), Brock, Chamberlain, Izzo, Meserve, Moser, Riggs, Sylwester and Wright; Associate Professors Burgmeier, Cooke, Dwork and Hill; Assistant Professors Aggarwal, Ashikaga and Haugh; Lecturers Aleong, Hatcher, and Puterbaugh; Instructors Burns, Kost, Lawlor and Morency.

Service Courses

The Mathematics Department provides service courses for all students throughout the university. The following lists of courses, grouped according to their prerequisites, are provided for the information of students seeking a first elective in mathematics.

Minimal background one year of high school algebra:
Math. 1 Elementary College Algebra (evenings and summers only)

One year each of high school algebra and geometry:
Math. 7 Fundamentals of Mathematics 1

Two years of high school algebra and one year of geometry:
Math. 2 Plane Trigonometry
Math. 4 Mathematics of Finance
Math. 9 College Algebra
Math. 10 Precalculus Mathematics
Math. 18 Mathematics for Business
Math. 33 Finite Mathematics

Four years or more of college preparatory mathematics in high school:
Math. 19 Fundamentals of Calculus I
Math. 21 Analytic Geometry and Calculus I

Students entering with Advanced Placement in Calculus may take Math. 22 or 121 as their first mathematics course at UVM.

1 Elementary College Algebra Review of fundamental operations and a more extensive study of fractions, exponents, radicals, linear and quadratic equations. Additional topics to be discussed include ratio, proportion, variation, progressions and the binomial theorem. This course covers the topics
normally included in intermediate algebra in high school. Students who have satisfactorily completed two years of high school algebra, or the equivalent, will receive no credit for this course. Offered only in Evening Division and Summer Session. **Prerequisite:** One year of high school algebra. Three hours. Staff.

**2 Plane Trigonometry** A study of trigonometric functions, their graphs and other properties, logarithms, solution of triangles, trigonometric equations and identities, and inverse trigonometric functions. Credit will not be given for both 2 and 10 nor 9 and 10. **Prerequisite:** 1 or 9. Three hours. Staff.

**4 Mathematics of Finance** Precalculus mathematics applied to interest, annuities, life insurance and other business areas. **Prerequisite:** 1 or 9. Three hours. Staff.

**7, 8 Fundamentals of Mathematics I, II** A liberal arts elective designed to illustrate both the enjoyment and the utility of a variety of mathematical concepts. **Prerequisites:** One year each of secondary school algebra and geometry; 7 for 8. Three hours. Staff.

**9 College Algebra** A study of sets, relations, and functions with particular attention to properties of algebraic, exponential, and logarithmic functions, their graphs and applications. Credit will not be given for both 2 and 10 nor 9 and 10. **Prerequisites:** Two years of secondary school algebra and one year of secondary school geometry. Three hours. Staff.

**10 Pre-Calculus Mathematics** Skills in working with numerical, algebraic and trigonometric expressions are developed in preparation for Mathematics 21. **Prerequisites:** Two years of secondary school algebra and a good background in geometry and trigonometry. Credit will not be given for both 2 and 10 nor 9 and 10. Three hours. Staff.

**18 Mathematics for Business** Elements of matrix operations, logarithms, exponential equations, differential and integral calculus and probability with applications to business. The Department recommends that credit not be given for any two of the courses 18, 19, 21. **Prerequisite:** Two years of secondary school algebra. Four hours. Staff.

**19 Fundamentals of Calculus I** An introduction to limits and differential calculus with a wide variety of applications. Students interested in intensive use of mathematics should take Mathematics 21. Credit will not be given for more than one of the courses 19, 21. **Prerequisites:** 9 and 2 or sufficiently strong background in secondary school algebra and trigonometry. Three hours. Staff.

**20 Fundamentals of Calculus II** An introduction to integral calculus and linear algebra with a wide variety of applications. Credit will not be given for more than one of the courses 20, 21. A student who completes Mathematics 20 may be admitted to Mathematics 22 upon the recommendation of his Mathematics 20 instructor. **Prerequisite:** 19. Three hours. Staff.

**21 Analytic Geometry and Calculus I** Plane analytic geometry and an introduction to the calculus of one variable including limits, continuity and the techniques and applications of differentiation. **Prerequisites:** 10; or 9 and 2; or strong background in secondary school algebra and trigonometry. Four hours. Staff.

**22 Analytic Geometry and Calculus II** Techniques and applications
of integration of functions of one variable, the calculus of vector functions, and polar coordinates. **Prerequisite:** 21. Four hours. Staff.

**33 Finite Mathematics** An elementary treatment of logic, sets, probability, vectors, matrices with a variety of applications to Markov chains, linear programming, game theory, and graph theory. **Prerequisites:** Two years of secondary school algebra and one year of secondary school geometry. Three hours. Staff.

1 Those who are deficient in high school mathematics for their chosen curriculum are urged to attend summer school prior to their first semester in college.

**102 Fundamental Concepts of Mathematics Analysis** Sets, relations, functions, the Schroeder-Bernstein theorem, cardinal numbers, ordinal numbers, well-ordering, the Axiom of Choice, Zorn's lemma, rational numbers, fundamental sequences, real numbers, complex numbers, elementary topology of the reals and complexes. **Prerequisite:** Credit or concurrent enrollment in Mathematics 121. Three hours. Staff.

**104 Fundamentals of Mathematics of Computation** An introduction to the mathematical theory and techniques underlying computer science. Topics include set theory, graph theory, Markov chains, game theory, semigroups, free monoids, finite groups and wreath products. **Prerequisites:** 22, Statistics 151 desirable. Three hours. Staff.

**121 Analytic Geometry and Calculus III** Solid analytic geometry, the calculus of functions of two and three variables, infinite series and elementary differential equations. **Prerequisite:** 22. Four hours. Staff.

**124 Linear Algebra** A study of matrices, linear dependence, vector spaces, linear transformations, characteristic equations and applications. **Prerequisite:** 22 or 20. Three hours. Staff.

**125, 126 Fundamental Concepts of Elementary School Mathematics** Discussion of natural numbers, integers, fractions, decimals, and real numbers together with the fundamental operations and fundamental principles involving them. Number bases, sets, measurement and approximation, ratio, proportion, percentage, and selected topics from algebra which are a natural extension of arithmetic. Open only to students in elementary education. **Prerequisites:** Sophomore standing; 125 for 126. Three hours. Staff.

**151 Applied Probability** For description see Statistics 151.

**179 Teaching Secondary School Mathematics** Contemporary secondary school mathematics curricula, their content from an advanced standpoint, unifying mathematical concepts and their implications at various levels, and the introduction of selected mathematical topics. Intended only for students with an interest in teaching secondary school mathematics. Not acceptable as part of any mathematics requirement for a degree. **Prerequisite:** Ed. 178, acceptance in teacher education, or permission of instructor. Three hours. Reserve.

**207 Probability Theory** For description see Statistics 251.

**216 Systems Programming** For description see Computer Science 201.

**218 Automata Theory** Capabilities and limitations of finite state automata. Minimization, control and identification of machines. Structure

**219, 220 Mathematical Logic** Truth tables, axiomatic propositional calculus, independence, first order quantification theory, completeness theorems, prenex normal forms, decidability. Formal number theory, recursive functions, Gödel numbers, recursive undecidability, axiomatic set theory, ordinal numbers, the axiom of choice, effective computability, undecidable problems. *Prerequisites*: 102 or 104; 219 for 220. Three hours. Aggarwal.

**233, 234 Theory of Functions of Real Variables** Functions of real variables, including: point sets and measure, transfinite numbers. Riemann and Lebesque integrals, and sequences of functions. Considerable outside reading is assigned. *Prerequisites*: 242; 233 for 234. Three hours. Staff.

**237 Numerical Methods I** Concept of error, polynomial approximation, summation techniques, solution of equations, linear systems, eigenvalues. *Prerequisites*: 121, 124 and knowledge of computer programming. Three hours. Staff.

**240 Operational Mathematics** Orthogonal functions, transforms and boundary value problems. *Prerequisite*: 230 or 271. Three hours. Staff.

**241 Advanced Calculus I** Calculus of several variables, Euclidean
spaces, open and closed sets, limits, continuity, differentiation (emphasizing the linearity), maxima and minima, Lagrange multipliers and integration of functions of several variables. **Prerequisites:** 121 and 124. Three hours. **Staff.**

**242 Advanced Calculus II** Jacobians, change of variables in a multiple integral, line and surface integrals, Green's, Gauss', and Stokes' Theorems, Fourier Series, Fourier and Laplace transforms. **Prerequisite:** 241. Three hours. **Staff.**

**245 Introduction to Operations Analysis** Problem definition, criteria, decision making; emphasis on modeling and simulation. Computerized simulations are accentuated. **Prerequisites:** CS 11 and either 19 or 21; 151. Three hours. **Brock.**

**241 Modern Algebra** Fundamental concepts of Abstract Algebra. Sets, mapping, groups, rings, integral domains, fields, homomorphisms and isomorphisms. **Prerequisites:** 22; 102 or 104 highly desirable. Three hours. **Staff.**

**242 Advanced Linear Algebra** Linear transformations and vector spaces, including Jordan forms. Symmetric, Hermitian, orthogonal and unitary matrices, and quadratic forms. **Prerequisites:** 124; 251 desirable. Three hours. **Staff.**

**251 Modern Algebra** Fundamental concepts of Abstract Algebra. Sets, mapping, groups, rings, integral domains, fields, homomorphisms and isomorphisms. **Prerequisites:** 22; 102 or 104 highly desirable. Three hours. **Staff.**

**252 Advanced Linear Algebra** Linear transformations and vector spaces, including Jordan forms. Symmetric, Hermitian, orthogonal and unitary matrices, and quadratic forms. **Prerequisites:** 124; 251 desirable. Three hours. **Staff.**

**253, 254 Topology** The elements of point set topology; closed sets and open sets in metric spaces, continuous mappings, connection, Peano curves, separation theorems and homotopy. **Prerequisites:** 102, 253 for 254. Three hours. **Staff.**

**255 Elementary Number Theory** Divisibility, prime numbers, Diophantine equations, congruence of numbers, and methods of solving congruences. **Prerequisite:** One year of calculus. Three hours. **Staff.**

**257 Theory of Groups** The study of the various kinds and structures of groups. **Prerequisite:** 251. Three hours. **Staff.**

**258 Galois Theory** The study of Galois theory leading to the insolvability of general quintic equations by radicals and theorems on construction with straightedge and compass. **Prerequisite:** 257. Three hours. **Staff.**

**260 Foundations of Geometry** Geometry as an axiomatic science; various non-Euclidean geometries; relationships existing between Euclidean plane geometry and other geometries; invariant properties. **Prerequisite:** One year of calculus. Three hours. **Izzo, Meserve, Riggs.**

**261 The Development of Mathematics** The historical development of the mathematical sciences is considered with an emphasis upon the interrelations among these sciences. Individual students are expected to emphasize the specific aspects of mathematics that are of interest to them and the level of abstraction that is compatible with their previous experience. **Prerequisite:** Nine hours of college mathematics. Three hours. **Staff.**

**262 Geometry for Elementary School Teachers** An informal approach to geometry is considered with an emphasis upon the use of intuitive geometric concepts in the introduction or clarification of most topics of elementary school mathematics. Not open to mathematics majors. **Prerequisite:** 125 or a teaching certificate. Three hours. **Staff.**

**263 Projective and Affine Geometries** The principle of duality, perspectivity, projectivity, harmonic sets, cross ratio, the theorems of Pascal and Brianchon, poles and polars. **Prerequisite:** 124. Three hours. **Staff.**
264 Vector Analysis Introduction to general vector methods, including the elements of vector algebra and vector calculus with applications to physics and mechanics. *Prerequisite:* 121. Three hours. Staff.

266 Mathematics of Digital Computation for Teachers Mathematical theory underlying digital computing machines including assigned problems on a University computer, including programming in computer system language. A portion of the course is devoted to elementary numerical analysis. *Prerequisites:* 121, 124 highly desirable. Three hours. Staff.

271 Applied Mathematics for Engineers and Scientists I Matrix Theory, Vector Analysis, Linear Ordinary Differential Equations. Emphasis on methods of solution, including numerical methods. No credit for mathematics majors. For a mathematics concentration, a sequence beginning with 230 is advised. *Prerequisites:* 121 and knowledge of computer system programming. Three hours. Staff.

273 Introduction to Combinatorics Combinatorial relations, elementary problems of existence, enumerative combinatorics; generating functions and graphs. Applications to problems in probability, mathematics of computers, graph theory and number theory. No graduate credit for mathematics majors. *Prerequisite:* 104. Three hours. Staff.

274 Computational Linear Algebra Implementation on digital computers is stressed. Topics include examples of “real” problems leading to formulation of linear computational problems; efficient algorithms for Gauss elimination, Householder upper triangular and tridiagonal reduction, stable least-squares computations, eigenvalue computations, determination of conditioning and stability, solution of under and over-determined systems. *Prerequisites:* 124 or 271, modest experience with digital computer programming. Three hours. Staff.

276 Mathematics of Space Flight Topics include orbit determination and prediction of natural and artificial satellites and projectiles. Astrodynamical coordinate systems and their transformations. Integration schemes and perturbation theory. Attitude determination. *Prerequisites:* 237 and modest experience with digital computer programming. Three hours. Riggs.

279, 280 Special Project An approved project under the guidance of a staff member and culminating in a written report. Involvement with off-campus groups is permitted. *Prerequisites:* Junior or Senior standing and approval of the Chairperson of the Department. One to three hours as arranged.

281, 283, 287, 289, 291, 293 Special Topics For advanced students in the indicated fields. Lectures, reports and directed readings on advanced topics. *Prerequisite:* Consent of instructor. Credit as arranged. Offered as occasion warrants. Staff.

281 Special Topics in Applied Mathematics

283 Special Topics in Computer Science

287 Special Topics in Algebra
289  Special Topics in Topology
291  Special Topics in Geometry
293  Special Topics in Analysis

Other Courses in Mathematics

In addition to the courses offered during the academic year, the following courses may be offered in summer sessions and in the evening division program.

Medical Microbiology

COLLEGE OF MEDICINE

Professors Johnstone, Schaeffer, and Stinebring (Chairman); Associate Professors Boraker, T. Moehring, Novotny, and Phillips; Assistant Professors Albertini, Fives-Taylor, Gump, Jakab, and J. Moehring.

120  Clinical Microbiology (3-6) A comprehensive study of human pathogenic microorganisms and their disease states in man. Emphasis is on the bacteria but some mycology and virology is included. Laboratory sessions provide the practical experience in handling and identifying these pathogens. Fall semester. Prerequisite: Microbiology 55. Four hours. Fives-Taylor.

197, 198 Undergraduate Research A small number of undergraduate honors students can be accommodated in individual research projects sponsored by a department member. Arrangement with the individual department member and approval of the Department Chairman. Credits negotiable. Staff.

203  The Mammalian Cell as a Microorganism Discussion of such current ideas in cell biology as cell immortality, transformation, dedifferentiation, synchronization, cell-macromolecule interaction; laboratory will illustrate current cell culture techniques as a foundation for the lectures. Designed for biology students of varied training. Prerequisite: Permission of instructors. Four hours. Moehring, Schaeffer.

205  Pathogenic Bacteriology Studies of major species of pathogenic bacteria with emphasis on mechanisms of disease production, epidemiology, control measures, and diagnosis. Designed for advanced undergraduate or
graduate students interested in phenomenon of parasitism. **Prerequisite:** Permission of the instructor. Three hours. Stinebring.

**211 Genetics of Microorganisms** Studies of organization and replication of genetic material, the expression of genetic information, and gene transfer in bacteria and bacterial viruses. **Prerequisite:** Permission of the instructor. Three hours. Novotny.

**223 Immunology** Analysis of the immune response with respect to structure and function of immunoglobulins, cytokinetics and immunocompetence, tolerance, ontogeny and phylogeny of adaptive immunity, immunogenetics of transplantation, hypersensitivity states, and theories of antibody formation. **Prerequisite:** Consent of the instructor. Four hours. Boraker.

## Medical Technology

**SCHOOL OF ALLIED HEALTH SCIENCES**

Associate Professors Breen, Lachapelle (Chairperson); Assistant Professor Reed, Sullivan; Instructors Czerniawski, Fike, Page, Russell; Lecturers Rapsinski, Sowek; Clinical Instructors Albarelli, Coble, Cote, Fairbanks, Isham, Letourneau, Standage, Thomas, Wilbur, Wyllie.

**Note:** All courses limited to students of Medical Technology except by permission of the Departmental Chairman.

**3 Medical Technology** Medical Terminology. Terminology related to medical science and Hospital services. Required of all students in the Department of Medical Technology, open to other Health Science students by permission of departmental chairman. One hour. Breen.

**20 Clinical Chemistry** Laboratory exercises include manual chemistry procedures as well as instrumentation in the analysis of body constituents. Practicum in Rowell Student Laboratory and the Mary Fletcher Unit Chemistry Laboratory. Required of all students in the Medical Laboratory Technician Program. Fall and spring semesters. Six hours. Sullivan, Wilbur.

**21 Hematology** Techniques of basic laboratory procedures in hematology. Rotating assignment in the clinical laboratory provided by the Medical Center Hospital of Vermont. Required of second year students in Medical Technology. Fall and spring semesters. Five hours. Reed, Letourneau, Wyllie, Sowek.

**22 Clinical Immunohematology** Introduction to human blood groups, compatibility testing, and identification of blood group antibodies. Includes lectures, student laboratory exercises and clinical practicum. **Prerequisite:** Senior MLT standing or permission of the instructor. Five hours. Isham, Breen, Fike.

**23 Clinical Microbiology** A course required for second year Medical Technology students which builds on the fundamentals of Microbiology 55 to include the isolation and identification of clinically significant pathogenic bacteria, from all types of clinical specimens. Includes didactic instruction and practicum in both clinical and student laboratories. **Prerequisite:** Microbiology 55. Five hours. Fall and spring semesters. Page, Rapsinski, Thomas.
101 Medical Technology Principles, procedures and special techniques. Includes serology, parasitology, urinalysis, spinal fluids, and coagulation. Spring semester. Four hours. Breen, Fairbanks, Sullivan, Staff.

104 Advanced Clinical Chemistry This course is designed to include in-depth advanced work in the chemistry laboratory. Included is work on multiple-channel auto-analyzers, the application of isotopes to the clinical laboratory, advanced laboratory instrumentation and "trouble shooting". Attention is focused on the following factors: the normal and pathological conditions of the patient which are relevant, the source, preservation and handling of the sample, the chemical manipulation, the instrumental method and the significance of the result. Students are given an opportunity to develop the leadership characteristics, and basic supervisory skills that are required of a chemistry supervisor, and/or to acquire experience in the application of educational theory and skills in the practical situation. Twelve hours. Sullivan.

105 Advanced Hematology This course is designed to build upon the basic skills learned in the Medical Laboratory Technician Program by providing advanced instruction in the theory and practice of clinical hematology. The course includes in-depth study of the physiology and pathophysiology of the blood and emphasis is placed on disease processes and concentrated study on peripheral and marrow smears. Four hours. Reed.

107 Special Topics in Clinical Microbiology A course designed to give the student in-depth coverage of the special areas of clinical microbiology including mycology, anaerobes, mycobacteria and parasitology. Course includes didactic instruction, student laboratory experiences and clinical practicum. Four hours. Prerequisites: MEDT 23 and MDMC 120. Page.

108 Advanced Microbiology A course designed to give the student advanced, in-depth coverage of routine clinical microbiology. The course includes a hospital practicum covering the following areas: blood, urine, stool, throat, sputum, wound and miscellaneous cultures; serology and urinalysis. In addition, the course includes an advanced hospital practicum at the Vermont State Health Laboratory as well as both the Department of Epidemiology and Surveillance and the Department of Infectious Diseases at the Medical Center Hospital of Vermont. The student will also be given the opportunity to participate in teaching the MLT Program. Six hours. Prerequisites: MEDT 23 and MDMC 120. Page.

110 Clinical Chemistry Principles and techniques currently employed in the laboratory are explored. Facets covered include: pathological conditions which are relevant, the source, preservation and handling of the sample, the chemical manipulation, the instrumental method, and the significance of the result. Required of all students in the Medical Technology Program. Fall semester. Variable. Sullivan, Wilbur.

111 Hematology Comprehensive study of principles, procedures, special techniques and disease states in hematology. Rotating assignments in the clinical laboratory provided by the Medical Center Hospital of Vermont. Required of fourth year students in Medical Technology. Spring semester. Five hours. Reed, Letourneau, Wyllie.

112 Clinical Immunohematology Advanced study of human blood groups. Emphasis is on problem solving, advanced theory and special laboratory exercises, and clinical practicum. Prerequisite: Senior MT standing or permission of the instructor. Five hours. Isham, Fike, Breen.
113 Clinical Microbiology A course designed to give fourth year MT students the fundamentals of isolation and identification of clinically significant pathogenic microorganisms in routine and special Bacteriology. Planned to correlate with Microbiology 120, taken concurrently. Course includes clinical practicum, didactic instruction and student laboratory experiences. Prerequisite: Microbiology 55. Spring semester. Five hours. Cote, Page, Rapsinski, Thomas.

160 Practicum in Hematology Taken by students in Advanced Specialty Core in Hematology. The course is divided into two parts: a) Hospital practicum in Instrumentation, electronic-data-processing and Developmental Methodology and Coagulation b) Educational Methodology; preparation and participation in hospital conferences. Five hours. Reed.

161 Advanced Practicum in Hematology The course consists of instruction in laboratory supervision, independent research projects, preparation of teaching materials and teaching experience in MLT Program. Five hours. Reed.

191 Principles of Immunology Basic concepts of the immune mechanism including structure and function of immunoglobulins, antigen-antibody reactions and the lymphoid system. Application of these concepts in health and disease of humans will be covered. Three hours. Lachapelle, Fairbanks.

201 Medical Technology, Advanced Individual research in the field of medical technology. Prerequisite: Departmental permission. Credit as arranged. Fall and spring semesters. Staff.

Microbiology and Biochemistry

COLLEGE OF AGRICULTURE

Professors Little and Racusen (Chairman); Associate Professors Foote, Sjogren, and Weller; Assistant Professor Hanlon; Teaching Associate Husted.

55 Introductory Microbiology (2-4) The study of microorganisms, especially bacteria, their structure, development and activities. Prerequisite: Eight hours of chemistry. Four hours. Sjogren. Also offered each spring. The fall term is reserved for Allied Health Science students except by permission of instructor.

195 Special Topics Prerequisite: Permission of instructor.

197, 198 Undergraduate Research Prerequisite: Departmental permission. One to three hours.

201 General Biochemistry (3-3) Broad coverage of biochemistry including principles of analytical biochemistry. Prerequisite: Chemistry 16 or 131. Four hours. Foote. Also offered each spring.

202 Advanced Biochemistry (3-3) A study of metabolic cycles with emphasis on research methods involving radioisotopes and chromatography. Prerequisite: 201 or 203 or permission of the instructor. Four hours. Racusen.

203 Molecular Biology (3-3) The structure and biological function of nucleic acids, proteins, and enzymes. Emphasis is on optical, electrophoretic,
and ultracentrifugal methods. **Prerequisite:** Chemistry 140 or 142 or permission of instructor. Four hours. Staff.

**220 Environmental Microbiology (2-3)** The activities of microorganisms, primarily bacteria, in air, soil, and water. **Prerequisite:** A previous course in microbiology. Four hours. Sjogren. Alternate years, 1977-78.

**254 Microbial Biochemistry (2-4)** The chemical composition and metabolism of microbial cells. **Prerequisite:** 55, 201, or permission of instructor. Four hours. Sjogren. Alternate years, 1976-77.

**295 Special Topics** **Prerequisite:** Permission of instructor.

---

**Military Studies**

*Lieutenant Colonels Vardamis (Chairman), Safford; Major Ness; Captains Moroney and Heit; Master Sergeant Hutchins; Staff Sergeant Campbell.*

**Note:** The Department of Military Studies offers courses to University students whether or not they are enrolled in ROTC. Students gain an understanding of the eminence and complexity of military affairs nationally and internationally. Total allowable credit for Military Studies varies by College; check with Department of Military Studies.

**1 Introduction to Military Studies (2)** American military heritage; customs and traditions of the service; historical development of the Army and its role in support of national objectives; the diversity of missions performed during both peace and war; civil-military relations; the role of ROTC, the National Guard and Reserve; the military as a profession. Fall and spring. Two hours. Heit.

**2 War and Society (2)** An overview of several aspects of war: warfare as seen by some notable military thinkers, effects of war on society and society on war, principles of war, and contemporary issues involving the use of military force. Fall. Two hours. Vardamis.

**3 War and the Arts (2)** An historical survey of mankind's changing views on war and the military as reflected in some major works of literature and cinema. Spring. Two hours. Vardamis.

**4 Contemporary World Military Scene (2)** Seminar on current international uses of military forces, viewed against a background of long range national concerns, especially of the U.S., U.S.S.R., China. Spring. Two hours. Safford.

**11 Patrolling** Fundamentals of patrolling. Classroom instruction reinforced with a ten to twelve hour field training exercise during which the student will participate in cadre led patrols. Fall and spring. One hour. Moroney.

**12 Rappelling (½ Physical Education credit)** Basic instruction in rope management, rope installation and rappelling, consisting of both classroom instruction and outdoor practical exercises. Fall and spring. One hour. Moroney.

**14 Physical Training (½ Physical Education credit)** Physical conditioning which provides the student an opportunity to assess his/her physical condition against the standards required for successful completion of the ROTC
**Advanced Course.** Also provides a means of getting into proper physical condition. Fall, twice; Spring, twice. One hour. Moroney.

**15 Combatives** Instruction in the basics of military hand to hand combat, to include the proper methods of falling, and simple throws. Fall and spring. One hour. Hutchins.

**16 Survival (½ Physical Education credit)** Instruction in wilderness survival techniques, to include land navigation, procurement of food, water and shelter. Fall and spring. One hour. Hutchins.

**17 Marksmanship (½ Physical Education credit)** Instruction in basic rifle marksmanship, to include hand and eye coordination, posture, and breath and trigger control. Fall and spring. One hour. Hutchins.

**18 Backpacking (½ Physical Education credit)** Instruction in the basics of backpacking, to include an overnight hike in the Green Mountains of Vermont. Fall and spring. One hour. Heit.

**19 Orienteering (½ Physical Education credit)** Instruction in land navigation using the map and compass. Fall and spring. One hour. Ness.

**101 Leadership and Management I (2)** Fundamentals of educational psychology applicable to instruction; techniques used in planning, presenting, and evaluating instruction. An orientation into military occupational specialties. Fall. Two hours. Ness.

**102 Leadership and Management II (2)** The psychological and sociological factors which affect human behavior; individual and group solution of leadership problems in an organization. Analysis of the leader's role in directing and coordinating the efforts of individuals and small groups in obtaining organizational goals. Spring. Two hours. Ness.

**111 Leadership and Management III (2)** Analysis of techniques and procedures used in managing organizations. The role of interdisciplinary teams and the development of courses of action to solve typical stressfull leadership problems. Fall. Two hours. Moroney.

**112 Leadership and Management IV (2)** Investigation of selected leadership and management problems associated with unit administration, military law, and the Army Readiness Program. Obligations and responsibilities of an officer. Spring. Two hours. Moroney.

**211 Special Studies (academic credit as arranged)** In-depth analysis of topics broached in MSTD 1, 2, 3 or 4. Guided research. Student proposes topic. *Prerequisite:* Those courses or equivalent by permission of Chairman. Fall and spring. Two hours. Staff.

**212 Special Studies (continuation of MSTD 211)** Fall and spring. Two hours. Staff.

---

**Music**

**COLLEGE OF ARTS AND SCIENCES**

*Professors Chapman, Lidral, W. Metcalfe (Chairman, T. Read; Associate Professors Kinsey, Schultz and Wigness; Assistant Professors J. Ambrose,*
Students in all music courses are required to attend a designated portion of major ensemble concerts, faculty recitals, and formal student recitals as part of the course requirements.

Theory and Composition

5, 6 **Theory I (2-3)** Melodic and rhythmic dictation, sight singing, and elementary harmony. Three hours. Staff.

9 **Introductory Music — Theory** Fundamentals of music: major and minor scales, intervals, transposition, rudiments of harmony, rhythm, terminology, the conventions of musical notation. Three hours.\(^1\) Staff.

105, 106 **Theory II (2-3)** Contrapuntal and harmonic dictation, advanced harmony, and elementary counterpoint. **Prerequisite:** 5-6. Three hours. Staff.

203, 204 **Orchestration** First semester: characteristics of instruments, arranging for orchestra; second semester: advanced exercises in orchestral scoring. **Prerequisites:** 105-106; 203 for 204. Three hours. Staff.

205, 206 **Counterpoint** First semester: tonal counterpoint; second semester: canon and fugue. **Prerequisites:** 105-106; 205 for 206. Three hours. Kinsey. 206 in alternate years, 1975-76.

207 **Pedagogy of Theory** Objectives, viewpoints, content and specific approach to the organization and teaching of theory courses. **Prerequisite:** Eighteen hours in theory. Three hours. Lidral.

208, 209 **Form and Analysis** Creative approach to aural and sight analysis of musical construction. **Prerequisites:** 105-106; 205 recommended. Three hours. Kinsey.

215, 216 **Composition** Creative work in free composition with instruction according to the needs and capabilities of the individual student. **Prerequisite:** 205 and 208 or consent of instructor. Three hours. May be repeated for credit. Read.

\(^1\) Enrollment in 5 will cancel credit for 9.

History and Literature

1, 2 **Survey of Musical Literature** Chronological survey of the literature of music from the early forms to the present. 1st semester — to the symphony; 2nd semester — the symphony to the present. Three hours. Staff. One section of this course is designated for music majors.

10 **Introductory Music — Listening** A study, from the listener’s point of view, of music from the Baroque through the Classical and Romantic to the twentieth century contemporary periods. Stylistic, structural, and orchestral developments. Three hours.\(^2\) Staff.

113 **Contemporary Music** Development and stylistic characteristics of twentieth century music from the late Romantics to the experimentalists. Both European and American composers will be presented. **Prerequisite:** 1, 2, or 10. Three hours. Read.
114 Jazz Literature  The history of jazz music: African and American backgrounds; transition to jazz, growth, early jazz, further developments in the decades from the teens to the present. Prerequisite: Music 1, 2, or 10. Three hours. Bemis.

123 through 128 Music Literature Studies in the literature of music. Prerequisites: 1, 2, and the ability to read music. Three hours. Staff.

193, 194 College Honors
195, 196 Special Topics
197, 198 Reading and Research

221, 222 History of Music Changes in musical structure and styles in relation to contemporaneous artistic, literary, religious, and social movements. First semester: Gregorian chant to the Baroque era. Second semester: Baroque to Modern. Prerequisites: 1, 2 and 5-6. Three hours. Chapman.

245, 246 Chamber Music Literature Study through analysis and performance of masterworks for small groups leading to public performance. Prerequisites: Twelve hours or the equivalent in performance field and departmental permission. One hour. Staff.

281 through 284 Independent Study Studies in theory, composition, history, or literature under the direction of an assigned staff member for advanced students and candidates for honors. Credits as arranged.

For Music Education, see page 182.

Performance

For the fees for instruction, see page 35.

A senior recital in the performance major field is required of all music majors. Regular appearances in informal recitals are required of all performance students. Appearance in one formal departmental recital a semester is required of all music majors. At the end of each semester jury examinations are given in applied music.

All music majors on any curriculum are required to pass a FUNCTIONAL PIANO FACILITY examination before certification for graduation. Music Education Majors should pass this exam prior to student teaching (i.e., by the end of their third year). This will include:

a. Ability to sight-read songs of the type found in a community song book.

b. Ability to harmonize at sight; to improvise a single piano accompaniment for songs requiring the use of I, IV, and V chords and some simple modulations; to transpose the songs and harmonizations to other keys.

c. Ability to sight-read fairly fluently simple accompaniments, vocal or instrumental, and simple piano compositions of the type used for school rhythmic activities.

41, 42 Major Ensembles (0-3) University Band, Choir, Choral Union, and Orchestra. Attendance at all rehearsals and public performances required. Prerequisite: Departmental permission. One hour. Staff. May be repeated for credit.

45, 46 Chamber Music (0-2) Study and performance of masterworks for small groups. Attendance at all rehearsals and public performances required.
Outside practice required. **Prerequisite:** Departmental permission. One hour. Staff. May be repeated for credit.

**51, 52 Performance Study** Individual instruction in piano, organ, classical guitar, harpsichord, voice, strings, woodwinds, brass, percussion, and harp. One to four hours. For specific instruments see course schedules each semester. Staff.

**71, 72 Class Study (0-2)** Required of music education students, elective to others to limit of facilities and equipment. Class study in performance fields of voice, strings, woodwinds, brass, and percussion. One hour. Staff. May be repeated for credit.

**74 Instrument Repair Class (0-2)** A laboratory for music education students in minor repair and adjustment of string, woodwind, brass, and percussion instruments. **Prerequisites:** String, woodwind, brass, and percussion classes or concurrent enrollment and departmental permission. One hour. Schultz.

**74A Piano repair — Tuning** A course to acquaint students with the basic knowledge of piano construction, tuning and repairing. Departmental permission. One hour. Weinrich.

**111 Music for Elementary Teachers** The development of musical skills, understandings, and attitudes pertinent to the teaching of music in the elementary classroom. **Prerequisite:** Sophomore standing. Three hours. Ambrose, Wigness, Schultz.

**112 Elementary Music Methods** A course to aid the elementary classroom teacher in developing the potential musicality of students to the highest level through the practical application of musical skills and understandings already acquired by the teacher. **Prerequisite:** 111. Three hours. Wigness.

**211, 212 Conducting (2-2)** First semester: technique of the baton, score reading, laboratory practice; second semester: preparation and performance of selected scores, including rehearsal procedures. Selected students may conduct University major ensembles. **Prerequisites:** 5-6, 211 for 212. Three hours. Staff.

**271, 272 Performance Pedagogy** Methods of teaching voice, strings, woodwinds, brass, percussion, or keyboard instruments including repertoire suitable for use at various levels of ability. Significant literature of all historical periods in the major field. **Prerequisites:** Senior standing in performance and consent of instructor. Three hours. Staff.

---

1 Indicated courses in performance may be repeated for credit.

2 Each hour of credit in performance study requires one hour’s practice per day, and credit will be given only on condition that the instruction be accompanied or preceded by a three-credit course in music and participation in ensemble, unless excused from the latter by the chairman.

---

**Nursing**

**SCHOOL OF NURSING**

**Professor Milligan (Director).**

**Professional Nursing:** Professor Sawyer; Associate Professors Cronin, Deck,
Demers, Emerson (Acting Chairperson), Forgione, Palmer, Murray, Schwalb, Scranon, Ure; Assistant Professors Barrett, Magee, Viens; Instructors Adams, Jacoby.

Technical Nursing: Associate Professor Allen (Chairperson); Assistant Professors Clarke, Casey, Gardiner, Gray; Instructor Cicione; Lecturers Kranich, Roy; Teaching Associate Hall.

Note: All courses limited to students majoring in nursing except by permission of Departmental Chairpersons.

Professional Nursing

102 Concepts of Health  Study and discussion of health as a concept, health care as a science and an art, roles of providers and consumers of health care and the role of health care in society. Lectures, multimedia sessions and seminars. Opportunity for observational experiences and self directed study. Three hours. Emerson, Viens.

104 Introduction to Nursing Skills  Identification and application of basic nursing skills necessary to provide health care for a person in his environment. Various learning resources provided to enable the student to meet the course objectives through self-directed study. Creativity and application of knowledge emphasized. Limited supervised experience in clinical setting. Three hours. Murray and Staff.

125-126 Nursing I and II  Development of knowledge and skills needed to assess and maintain the psychosocial, physical and physiological integrity of individuals of all ages during health and episodes of illness. Health problems resulting from common deviations from normal physical, physiological and psychosocial functions are explored. The dynamics of groups (family and peer) are introduced. Laboratory experiences take place in different hospital settings and with families in the community. Prerequisites: Chem 3-4, Zool 5-6, MCBI 55, H.Ec. 141 and Nurs. 104. Nine hours. Staff.

145 Nursing III  Development of knowledge and skills needed for nursing individuals of all ages with complex problems involving pathophysical and psychosocial functions; implications of illness for the family will be emphasized. Development of knowledge and skills necessary in giving nursing care to families and groups with emphasis on the interrelatedness of the family and group to the environment. Laboratory experiences in a variety of community settings. Prerequisite: Nurs. 126. Nine hours. Staff.

146 Nursing IV  Development of knowledge and skills needed to assume leadership in providing nursing care for groups with emphasis on the effect of the roles of leadership, collaboration, and coordination on the interrelatedness of these groups; implications of the health team approach will be emphasized. Laboratory experiences in selected community settings. Prerequisite: Nurs. 145. Nine hours. Staff.

151 Nursing Research  An introduction to research in nursing. Each student will participate in designing a study of a nursing problem. Prerequisite: Nurs. 126. Three hours. Sawyer and Staff.

152 Nursing Elective  This course is designed as an in-depth study and practicum in an approved nursing experience in a setting which meets specific needs and/or reflects particular area of interest. Prerequisite: Nurs. 145. Six hours. Staff.
195 Independent Study  Independent study in nursing as indicated by student’s interest. Prerequisite: Departmental permission. One to three hours.

Technical Nursing

2 Dynamics of Health Care  This course is designed to increase the student’s understanding of the delivery of health services, current status and future directions. Emphasis is on roles and responsibilities of nurses, health care workers, the user of health care services and the team approach to comprehensive health care. Prerequisite: 14. Two hours. Allen.

11-12 Fundamentals of Nursing  A basic course in the principles of nursing care. The entire sequence focuses on nursing interventions to meet the physiological, safety, and individuality needs of all persons. Within each course, specific needs of man are presented in depth with learning opportunities to develop related skills and to adapt these skills to specific age levels. Microbiology content taught in collaboration with the Department of Microbiology in the College of Medicine is included. Concurrent experiences are planned in direct care settings. Five hours. Cicione, Cosey, Hall.

14 Nursing Care of Children and Adults (four week summer session)  Prerequisites: 11-12, Anatomy 9, Physiology 10. Four hours. Staff.

27-28 Nursing Care of Children and Adults  These courses focus on nursing interventions necessary to meet changing needs of children and adults in various stages of the wellness—illness continuum. Within each course, content is presented within a framework of broad psychosocial and pathophysiological concepts in which principles of nursing care are emphasized. Clinical learning experiences focus on the adaptation and application of nursing principles to individual patient situations, including maternal and infant care and care of children and adults with varying alterations in physiological and/or psychological functioning. Prerequisite: 14. Ten hours. Clarke, Gardiner, Gray, Kranich, Roy.

30 Nursing Seminar  This course is designed to increase the student’s understanding of the role of the technical nurse within the profession of nursing. Past and current trends in nursing are reviewed in relation to future goals. Prerequisite: 27. Two hours. Allen.

195 Independent Study  Independent study in nursing as indicated by student’s interest. Prerequisite: Departmental permission. One to two hours.

Pathology

COLLEGE OF MEDICINE

Professors Clemmons, Craighead (Chairman), Korson, Stark, Trainer; Associate Professors Harris, Howard, Kanich, Perl; Assistant Professors Brody, Glavin, Little, MacPherson, Whitcomb; Instructor Wlodarski.

101 Introduction to Human Disease (2-3)  This is an elementary course in human pathology designed for Allied Health students. The first portion will deal with general mechanisms of disease, to be followed by disorders of specific organs. Prerequisites: One year college level general biology or equivalent and permission of departmental chairman. Three hours. Staff.
**201 Histochemistry** A survey of techniques used for chemical identification of cellular and tissue components, including discussion of underlying theories. **Prerequisites:** An acceptable course in cell structure (e.g., Anatomy 311, Botany 256); Chemistry 131-132; permission of the department. A course in biochemistry is strongly recommended. Credit as arranged. Not offered each year. Korson.

---

**Pharmacology**

**COLLEGE OF MEDICINE**

*Professors Gans, Jaffe, Robinson and Soyka (Chairman); Associate Professors Doremus, McCormack, Reit; Assistant Professor (Clinical) Scollins; Visiting Professor Maxwell.*

**190 Pharmacology for Physical Therapy** Basic pharmacology and classes of drugs which may alter the responsiveness of patients to physical therapy. Last six weeks of second semester. Two hours. Staff.

**272 Toxicology** The biology of environmental intoxicants and of drug abuse. Ecologic and physiologic consequences of the dissemination of agricultural, industrial and medicinal chemicals. **Prerequisites:** Organic chemistry and background in biology. Open to undergraduates. Three hours. Gans.

**290 Introduction to Pharmacology** Consideration of the factors which determine the efficacy and safety of drugs with emphasis on representative agents used in medicine. **Prerequisites:** Introductory course in organic chemistry (Chem. 4, 16 or 131-132) and background in biology or health sciences. Three hours: Staff.

---

**Philosophy**

**COLLEGE OF ARTS AND SCIENCES**

*Professors Cahn (Chairman), Dykhuizen (emeritus) and Hall; Associate Professors Mann, Moneta, and Sher; Assistant Professors Beckett, Hinman, P. W. Kitcher, P. S. Kitcher, Miller, and Swanson.*

**1 Introduction to the Problems of Philosophy** An introduction to philosophy through a study of such fundamental problems as knowledge and belief, mind and body, freedom and determinism, the existence of God, moral and aesthetic values, and liberty and the authority of government. Readings in historical and contemporary sources. Three hours. Staff.

**2 Historical Introduction to Philosophy** Works of major philosophers in the Western tradition considered in their historical and philosophical contexts. Three hours. Cahn, Hall, P. S. Kitcher, Moneta.

**3 Introduction to Logic** A study of the basic principles of deductive inference. Three hours. Beckett, Mann.

**4 Introduction to Ethics** An analysis of the principal problems and theories of ethics. Three hours. Hall, Hinman, Sher.
101 History of Ancient Philosophy A study of the works of the Pre-Socratics, Plato, Aristotle, and their successors. Three hours. Cahn, Hall, Mann.

102 History of Modern Philosophy A study of the works of the major philosophers of the seventeenth and eighteenth centuries: Descartes, Spinoza, Leibniz, Locke, Berkeley, Hume, Kant, and others. Prerequisite: 101 is recommended. Three hours. Cahn, P. S. Kitcher, P. W. Kitcher.

105 History of Medieval Philosophy A study of the works of such major philosophical figures as Augustine, Anselm, Abelard, Duns Scotus, and William of Ockham. Prerequisite: 101 is recommended. Three hours. Mann.

107 Nineteenth Century Philosophy A study of the works of such philosophers as Hegel, Fichte, Schopenhauer, J. S. Mill, Kierkegaard, Nietzsche, and Marx. Prerequisite: 102 is recommended. Three hours. Hall.

110 Nature of Mind An examination of philosophical issues raised by influential psychological views of the nature of the human mind. Prerequisite: 1 or 2 or one course in psychology. Three hours. P. W. Kitcher.

112 Introduction to the Philosophy of Science An introduction to the major philosophical problems raised by science. Such topics as the nature of scientific inference, the structure of scientific theories, causation, explanation, and scientific change will be studied. Prerequisite: 1 or 2 or History 61 or six hours in some science. Three hours. P. S. Kitcher.

121 Oriental Philosophy An examination of the main schools of Chinese and Indian philosophy including Confucianism, Taoism, Buddhism, Neo-Confucianism, and Maoism. Three hours. Swanson.

130 Philosophical Foundations of Education A critical examination of the aims of education and the most appropriate means of achieving those aims. Readings from historical and contemporary sources. Prerequisite: 1 or 2. Three hours. Cahn.

135 Philosophy of Religion A critical analysis of such issues as the nature of religion, the concept of God, the grounds for belief in God, the immortality of the soul, truth and revelation, and problems of religious language. Readings from historical and contemporary sources. Prerequisite: 1 or 2. Three hours. Cahn, Hall, Mann.

140 Social and Political Philosophy An analysis of such fundamental theories and problems in social and political thought as political obligation, rights, and justice. Prerequisite: 1, 2, or 4. Three hours. Hinman, Sher.

142 Philosophy of Law An analysis of the nature of law including some of the leading theories, such as natural law theory, legal positivism, and legal realism. Prerequisite: 1, 2, or 4. Three hours. Hall, Hinman.

144 Philosophical Problems in Medicine A critical and intensive examination of such problems as abortion, euthanasia, dying and death, the ethics of organ transplantation, and the ethics of genetic engineering. Prerequisite: 1, 2, or 4. Three hours. Hinman, Mann.

151 Philosophy and Literature Selected philosophical works and the literary works they have influenced. Prerequisite: One course in philosophy. Three hours. Hall, P. S. Kitcher, Moneta.

152 Philosophy of Art A consideration of some leading theories of
art, and their application to problems of art as they appear in music, literature, painting, and in the general criticism of the arts. **Prerequisite:** One course in philosophy. Three hours. Cahn, Hall, P. W. Kitcher.

**160 Phenomenology I** A systematic study of fundamental principles of the phenomenological method such as: intentionality of consciousness, phenomenological reflection, phenomenological reduction, concept of constitution, and inner time consciousness. **Prerequisite:** One course in philosophy. Three hours. Moneta.

**193, 194 College Honors**

**195, 196 Special Topics**

**197, 198 Readings and Research**

**201 Theory of Knowledge** A critical examination of the nature and sources of knowledge; belief, truth, evidence, perception, memory, and induction. **Prerequisites:** 101 and 102. Three hours. P. W. Kitcher, Sher.

**202 Metaphysics** A critical examination of such topics as the nature of space and time, the concept of change, the identity of the self, the nature of the world and man's place in it. **Prerequisites:** 101 and 102. Three hours. Cahn, Mann, Moneta, Sher.

**210 Philosophy of Mind** Major philosophical theories of the mind and its relation to the physical world, the nature of sensation, desire, and belief, and the relation between thought and action. **Prerequisite:** 102 or 110. Three hours. P. W. Kitcher, Sher.

**212 Philosophy of Science** A thorough investigation of one or two problems in the philosophy of science. There will be emphasis on modern attempts to solve them. **Prerequisite:** 112 or extensive study in the sciences. Three hours. P. S. Kitcher.

**214 Mathematical Logic** A survey of the basic material of mathematical logic: the propositional calculus, the predicate calculus, first-order theories, formal number theory and the elementary parts of axiomatic set theory, metalogical results including completeness theorems and Gödel's first incompleteness theorem. **Prerequisite:** 3 or Mathematics 102 or Mathematics 104. Three hours. P. S. Kitcher.

**215 Philosophy of Mathematics** A study of the philosophical problems connected with mathematics. The course will attempt to answer the following questions. What (if anything) is mathematics about? How do we acquire our mathematical knowledge? Is there an important difference between mathematics and natural science? Could all our mathematical beliefs be false? **Prerequisite:** 3 or 214 or extensive background in mathematics. Three hours. P. S. Kitcher.

**217 Philosophy of Language** A philosophical study of the nature of language. **Prerequisite:** 3 or 214 or background in linguistics. Three hours. P. S. Kitcher, Sher.

**221 Tao Te Ching** A systematic study of one of the most important texts of Taoism and of the English translation of the text. **Prerequisites:** 101, 102, and 121. Three hours. Swanson.

**222 I Ching or Book of Changes** A systematic study of one of the most difficult and most important texts in the Oriental tradition. **Prerequisites:** 101, 102, and 121. Three hours. Swanson.
230 Philosophy of History An investigation of theories of history from the perspectives of both historians and philosophers. Prerequisites: Either two advanced courses in philosophy or six hours in history. Three hours. P. W. Kitcher, Mann.

240 Contemporary Ethical Theory An analysis of the ideas of contemporary moral philosophers in normative ethics and metaethics. Prerequisites: 4, 140, or 142. Three hours. Hinman, Sher.

260 Phenomenology II A critical and intensive investigation of the thought of a major twentieth century phenomenologist, e.g. Husserl, Heidegger, or Merleau-Ponty. Prerequisite: 160. Three hours. Moneta.

262 Existentialism A study of existentialism as a philosophy, and an examination of its background, as displayed in the literary and philosophical writings of Pascal, Kierkegaard, Camus, Heidegger, and Sartre. Prerequisites: Any two of 101, 102, and 107. Three hours. Hall, P. W. Kitcher.

265 American Philosophy The thought of such leading American philosophers as Peirce, James, Royce, Santayana, Dewey and Whitehead. Prerequisites: 101 and 102. Three hours. Miller.

271, 272 Seminar: Major Philosophical Author A study of the major philosophical texts by a single author. May be repeated for credit when different authors are studied. Prerequisite: An appropriate 100-level course in philosophy. Three hours. Staff.

273, 274 Seminar: Major Philosophical Period or School A study of the philosophical texts of a specific period or school of philosophy. May be repeated for credit when different periods or schools are studied. Prerequisite: An appropriate 100-level course in philosophy. Three hours. Staff.

281, 282 Seminar Selected topics in philosophy. Prerequisite: An appropriate 200-level course in philosophy. Three hours. Staff.

297, 298 Readings and Research Independent study with an instructor on a specific philosopher or philosophical problem. Prerequisite: An appropriate 200-level course in philosophy. Staff.

Physical Therapy

SCHOOL OF ALLIED HEALTH SCIENCES

Associate Professor Feitelberg (Chairperson, Department of Physical Therapy); Associate Professor Page; Assistant Professors Anderson, Moffroid and Sampson; Instructors Delahanty, Jette, Nelson, Sewell; Clinical Assistant Professors Corbin, DeAngelis, Parry, Smith; Clinical Instructors Cummings, Hebert, Kane, Kleczak, Leonard, Marn, Montague, D. Nalette, E. Nalette, Sorrell, Sowles, Sulima, Tandy, Tighe.

21 Physical Therapy I History and current trends of the profession with emphasis on the medical-ethical-legal aspects of practice. The role of the therapist in treatment, the health care environment and as a team member. Supervised observation in approved clinical centers. Three hours. Feitelberg, Faculty.
22-121-122-151-152 Physical Therapy Procedures II-VI This sequence of courses develops increasing levels of sophistication in evaluation and treatment procedures to prepare the student for professional qualification. Included are procedures such as massage, physical agents, therapeutic exercise and physical rehabilitation, culminating with the investigation of more complex medical problems and their management. Lecture, laboratory, clinical demonstrations and clinical correlation. (II: 2 hours; III: 3 hours; IV: 5 hours; V: 5 hours; VI: 3 hours) Anderson, Page. Faculty.

110 Kinesiology The study of normal posture and movement. Principles of anatomy, biomechanics and neurophysiology are studied in relation to static and dynamic components of motion. Prerequisite: Sophomore Physical Therapy standing or permission of the instructor. Three hours. Moffroid.

120 Scientific Inquiry I Introduction to clinical inquiry. Basic statistics of central tendency, dispersion, correlation and analysis of variance. Current literature provides a framework for discussion of these statistical applications. Two hours. Moffroid.

128 Clinical Education I Students are assigned to a variety of approved clinical centers for supervised observation and participation. Learning experiences are designed in cooperation with the clinical faculty in keeping with the level of competency acquired. Three hours. (Full time, 6 week period, May-June) Nelson, Clinical Faculty.

131-132-133 Clinical Medicine I-III Management of disease processes in the major medical specialties such as General Medicine, Orthopaedics, Neurology, Pediatrics and Rehabilitation Medicine. Utilization of the problem oriented medical record as a basis for understanding the concept of comprehensive care. Lecture and clinical presentations. A continuum of four semesters. (131: 1 hour; 132: 2 hours; 133: 2 hours). Faculty, College of Medicine.

142 Independent Study The selection and development of a topic for investigation using an assigned faculty member as a preceptor. Seminar sessions for guidance and problem solving on related issues. Two hours. Faculty.

144 Health Care Systems An overview of the present health care system, with emphasis on issues and aspects that are specifically related to physical therapists. Lecture, discussion, written projects. Three hours. Sampson, Faculty.

158 Clinical Education II A continuation of Clinical Education I. At this level students fully participate in the evaluation and treatment of patients according to the objectives of the facility. A wide variety of opportunities are planned within the facility and community. Students are assigned full time to two facilities during this period. Five hours. (full time 12 week period, January-March) Nelson, Clinical Faculty.

161 Psychological Aspects of Physical Disability Consideration of the reactions to illness and disability and associated emotional and personality changes. Emphasis on developing methods to modify behavior for effective treatment and teaching of the disabled and the family. Two hours. TBA

172 Principles of Organization and Administration Analysis of current designs and methods used in existing physical therapy facilities. Opportunity to investigate concepts for projecting new patterns to meet the needs of future health care systems. Study of communication theories fundamental to
the process of change. Group activity to design alternate models based on problem solving. Three hours. Feitelberg, Clinical Faculty.

174 **Principles of Education** Introduction to learning theory as applicable to Physical Therapy. Opportunity to become familiar with instructional media, design and participate in educational units. Two hours. Sampson, Faculty.

176 **Scientific Inquiry II** *Prerequisite:* 173 or a statistics course. Clinical inquiry is presented as a methodology. Two way analysis of variance is learned. The student plans an experimental design and completes it with mock data. The administrative planning of clinical inquiry is explored and methods are discussed for disseminating information. Two hours. Moffroid.

---

**Physics**

**COLLEGE OF ARTS AND SCIENCES**

Professors Crowell, Detenbeck, Juenker, Krizan, Nyborg and Scarfone; Associate Professors Brown and Cohen; Assistant Professor Sachs.

1 **Celestial Physics** Description of various historical models of the observable universe. Nature of light and description of optical instruments, especially the telescope. Concept of space and time, Einstein's Relativity. Three hours. Crowell.

2a,b,c **Topics in Physical Science** A sequence of three four-week mini-courses offered for one credit each on topics to be announced in advance. Students may enroll in from one to three credits. Limited use of algebra. No prerequisites. Staff.

3 **Introductory Physics** (3-2) A one-semester laboratory course in basic physics, designed particularly to meet the needs of students in the programs in the agricultural and health sciences. Four hours. Brown.

11, 12 **Elementary Physics** (3-2) A survey of the principles of classical and modern physics. Recommended for students not concentrating in science, mathematics or premedical programs. *Prerequisites:* 3 or 11 for 12, secondary school algebra and trigonometry. Four hours. Staff.

15, 16 **General Physics** (3-2) Introduction to the principles of physics for students concentrating in the natural sciences. Recommended for students in premedical programs. *Prerequisites:* 15 for 16; credit in Mathematics 20 or concurrent enrollment or credit in Mathematics 21 for 15. Four hours. Staff.

24, 25 **Fundamentals of Physics** (3-2, 3-2) For students concentrating in engineering or a physical science. *Prerequisites:* For 24, Mathematics 21 and credit or concurrent enrollment in Mathematics 22; for 25, 24 and credit or concurrent enrollment in Mathematics 121. Four hours. Staff.

128 **Introductory Modern Physics** (3-2) An introduction to the theory of relativity and to modern descriptions of radiation, the electron, the atom, the atomic nucleus, and elementary particles. *Prerequisites:* 16 or 25 and credit or concurrent enrollment in Mathematics 121. Four hours. Staff.

193, 194 **College Honors**
195, 196  **Special Topics**

197, 198 **Readings and Research**

201, 202 **Experimental Physics (1-3)** Experiments in classical and modern physics. Each student selects laboratory experiments appropriate to his background and interests. The course may be entered at the beginning of either semester and repeated for credit up to a maximum of four semesters. **Prerequisites:** 16 or 128 and Mathematics 121. Junior standing. Three hours. Staff.

211 **Mechanics** Newtonian dynamics of particles and systems of particles, with applications to problems of special importance, such as driven and coupled harmonic oscillators and central field trajectories. **Prerequisites:** 16 or 25, Mathematics 121. Three hours. Brown.

213 **Electricity and Magnetism** Fundamental principles of electricity and magnetism; electrostatic fields, and magnetic fields of steady currents. Electrical and magnetic properties of matter and electromagnetic energy relationships. **Prerequisites:** 16 or 25, Mathematics 121. Three hours. Krizan.

220 **Biological Physics (3-2)** Physical laws, concepts and methods discussed with respect to their reference to biology. **Prerequisites:** 12 or 16, Chemistry 2, Mathematics 22. Four hours. Nyborg.

222 **Advanced Biological Physics (3-2)** Sound and electromagnetic waves; ionizing particles and radiation. Interaction of these physical agents with biological systems. Physical properties of macromolecules and their aggregates. **Prerequisites:** Chemistry 2; Mathematics 121; and experience in applying differential equations. Departmental permission required. Four hours. Nyborg. Alternate years: 1976-77.

242 **Introduction to Solid State Physics** Introduction to crystal structures, reciprocal lattices, lattice vibrations. Thermal properties of solids and free electron theory of metals and semi conductors. Elementary band theory. **Prerequisite:** 128. Three hours. Scarfone. Alternate years: 1975-76.

255 **Acoustics and Optics** Introduction to two important areas of classical wave phenomena. Use of rays and waves in describing the propagation and superposition of sound and light; geometric and physical optics, physical acoustics. **Prerequisite:** 128. Three hours. Detenbeck. Alternate years: 1975-76.

258 **Relativity** Development of Einstein’s theory of special relativity. Lorentz transformation, time dilation, length contraction, mass variation, relative velocities. Introduction to four dimensional space. Concepts of general relativity. Applications selected from astrophysics, elementary particles, etc. **Prerequisite:** 128. Three hours. Krizan. Alternate years, 1975-76.

265a, b, c **Thermal Physics** A sequence of three units or mini-courses: 265a, Thermodynamics; 265b, Kinetic Theory; 265c, Statistical Mechanics.
Students may enroll in from one to three units for one credit each. **Prerequisites:** 128 or 16 and Mathematics 121 for 265a; 265a or other thermodynamics course for 265b; 265b for 265c. One to three credits. Juenker. Alternate years: 1976-77.

**273 Introductory Quantum Mechanics.** Introduction to non-relativistic quantum mechanics. Schroedinger equation and applications to simple systems. **Prerequisites:** 128 and 211. Three hours. Scarfone.

---

**Physiology and Biophysics**

**COLLEGE OF MEDICINE**

Professors Alpert (Chairman), Chambers, McCrorey, Parsons; Assistant Professor Hamrell; Associate Professors Gibbons, Hendley, Low, Webb, Whitehorn; Lecturer Halpern.

**10 Introduction to Human Physiology A Systems Approach to Biology.** This course will provide a physical-chemical basis for an understanding of modern human physiology. Specific emphasis will be placed on the functioning of the various organ systems and the interrelationships among these systems. Time will be spent in discussing how the intact organism uses the systems for maintaining its own integrity and for withstanding the stresses of the environment. There will be a focus on the skeletal-neuro-muscular system; cardiovascular system; respiratory system; gastrointestinal system; endocrine system; nervous system, and the renal system and body fluids. Three hours. Alpert. Staff.

**101-102 Physiology and Biophysics (5-5)** The scientific basis of mammalian (especially human) physiology and biophysics is presented for physical therapy students as well as other undergraduate and graduate students requiring an in-depth working knowledge of structure and function. Emphasis is placed on the broad physical, chemical and biological principles underlying the performance of the subcellular components, cells, tissues, organs and multi-organ systems. Time will be spent in discussing how the intact organism maintains its own integrity despite the environmental stresses to which it is subjected. The laboratory will supplement all of these areas including experiments using human volunteer subjects for studying the detailed interaction of the pulmonary, renal, and cardiovascular systems during a variety of stresses. **Prerequisites or concurrent courses:** Chemistry 3 and 16, two semesters of general physics or equivalent, and one semester of mathematics or permission of instructor. Two semesters, 5 hours per semester. Staff.

---

**Plant and Soil Science**

**COLLEGE OF AGRICULTURE**

Professors Wiggans (Chairman), Bartlett, Boyce, and MacCollom; Associate Professors Evert, Parker, Pellett, and Wood; Assistant Professor Magdoff; Lecturers Flinn, Watson, and Whipkey; Adjunct Professor Calahan; Teaching Associate Bruckel.

**10 Home and Garden Horticulture** Planning, selecting, and main-
taining shrubs, trees, flowers, lawns, fruits, and vegetables around the home. Designed primarily for non-agricultural students. Three hours. Wiggans, Staff.

11 Principles of Plant Science Principles and practices involved in the culture, management, and utilization of economically important horticultural and agronomic crops. Three hours. Boyce.

14 Laboratory and Field Photography Introduction to still photography for the student and researcher in the biological sciences. Three hours. Wood. Alternate years, 1976-77.

31 Insects — Man's Greatest Competitor Insects, their evolution, ecology, control and impact on history and culture. Three hours. Parker.

61 Introductory Soil Science (3-3) Introductory study of the nature and properties of soils and how they serve as a media for plant growth. Prerequisite: One semester of chemistry. Four hours. Magdoff.

106 Insect Pest Management (3-2) Survey of the major insect orders, and methods for controlling injurious species. Prerequisite: 11. Four hours. Parker.

107 Forest Entomology (2-2) Ecology and population dynamics of insects affecting forests and forest products. Insect control by silvicultural, biotic and chemical means. Prerequisite: Junior standing in forestry. Three hours. MacCollom.

109 Soil Erosion and Conservation General hydrologic processes involved in surface runoff and resultant soil erosion; land management techniques for controlling soil and sediment pollution. Two field trips by arrangement. Prerequisites: 61 and Math 2 or 9. Three hours. Whipkey.

112 World Crops Effect of environment, nutrition, and management on crop growth, distribution and production of world food supplies. Prerequisite: 11 or Bot 4. Three hours. Wood.

122 Small Fruit Crops (2-3) Principles of small fruit production, including propagation, culture, management, and harvesting. Prerequisite: 11. Three hours. Boyce.

124 Vegetable Crops (2-3) Principles and practices of home and commercial vegetable production, including, seed production, tillage, cultural practices, nutrition value, storage, and processing. Prerequisite: 11. Three hours. Calahan.

126 Ornamental Horticulture (3-3) Identification, climatic requirements, cultural management, and use of ornamental plant materials in landscape planting. Prerequisite: 11. Four hours. Bruckel.

138 Plant Propagation (2-4) Principles and practices involved in propagating herbaceous and woody plants by seeds, division, layering, cuttings, budding, grafting, and tissue culture. Prerequisite: 11. Three hours. Evert.

141 Forage Crops (3-3) Identification, establishment, and management of crops grown for hay, pasture, and silage. Prerequisite: 11. Three hours. Wood.

145 Turfgrasses (2-3) Establishment, maintenance and utilization of
turf for lawns, parks, athletic fields, airports, cemeteries, roadsides, golf courses, and ski slopes. **Prerequisite:** 11 or Botany 4. Three hours. Wood. Alternate years, 1977-78.

151 Landscape Design I (2-3) An introduction to the theory of landscape design and its relationship to man, man-made structures, and the natural environment. **Prerequisite:** Permission. Three hours. Flinn.

152 Landscape Design II (2-6) Application of landscape design theory to a wide range of land use and environmental problems. **Prerequisite:** 151. Four hours. Flinn.

162 Soil Fertility and Management Principles of soil management including soil testing methods and interpretations, fertilizer manufacture, usage, and management practices. **Prerequisite:** 61. Three hours. Magdoff.

197 Undergraduate Special Topics Lectures, laboratories, readings, field projects, surveys or research designed to provide specialized experience in horticulture, agronomy, soils, or plant environment. **Prerequisite:** Permission. One to three hours; up to fifteen hours may be arranged through the Department Chairman for approved off-campus project. Staff.

201 Micrometeorology Theoretical and practical considerations of the micrometeorological factors that affect plant growth and agricultural practices. **Prerequisite:** 11. Three hours. Staff. Alternate years, 1977-78.

204 Plant Research Techniques (2-3) Methods of conducting research with plants including the organizing and planning of experiments. **Prerequisite:** 11 and Botany 104. Three hours. Wiggans. Alternate years, 1976-77.

205 Mineral Nutrition of Plants Role of essential elements for plant growth including classical and modern approaches to the study of ion avail­ability and transport. **Prerequisite:** Botany 104. Three hours. Bartlett and botany, forestry, and plant and soil science staff. Alternate years, 1976-77.

207 Water Relations of Plants (See forestry 207) Three hours. Donnelly and botany and plant and soil science staff. Alternate years, 1976-77.

221 Advanced Tree Fruit Culture (2-3) Theory and practice of modern commercial fruit science. Nutrition and cultural responses to various management practices. **Prerequisites:** 11 and 61. Three hours. Calahan.

232 Biological Control of Insect Pests (2-2) A survey of the biological agents used in controlling insects and related arthropods, and their application and limitations. **Prerequisite:** An intermediate course in entomology. Three hours. MacCollom. Alternate years, 1977-78.

234 Medical Entomology (2-2) The relationships of insects and related arthropods to the causation of pathological conditions in man and animals. **Prerequisite:** An intermediate course in entomology. Three hours. Staff. Alternate years, 1976-77.

261 Soil Classification and Land Use Classification of soils throughout the world as they relate to soil development and land use. Three Saturday field trips. **Prerequisite:** 61 or a total of six hours in ecology, geography, or geology. Three hours. Bartlett, Watson. Alternate years, 1976-77.

264 Soil Chemistry (3-3) Chemistry and biology of soils affecting plant growth including the properties of clays and organic matter. **Prerequisites:** 61, two semesters chemistry. Four hours. Bartlett. Alternate years, 1977-78.
266 Soil Physics (2-3) Mathematical and physical principles of the soil-water-plant interaction and its relationship to production and management. Prerequisites: 61 and one semester of physics. Three hours. Bartlett. Alternate years, 1976-77.

281 Seminar Presentation and discussion of papers on selected topics of current interest by students and staff. Prerequisite: Senior standing. One hour. Staff.

Political Science

COLLEGE OF ARTS AND SCIENCES

Professors Dellin, Gould, Haugen, Hilberg, Little, and Staron (Chairman); Associate Professors Kinnard, Nelson, Pacy, Rosenbloom, Simon, and Wertheimer; Assistant Professors Brewer, Flannery, Frankovic, and Grabosky.

11 Introduction to Political Science Elements of political science. Three hours. Staff.

13 Introduction to the Problems of Political Thought An examination of basic problems in political philosophy, e.g., morality and law; punishment; freedom; equality; obligation and disobedience. Three hours. Wertheimer.

21 American Political System Institutions, processes, and problems of American government. Three hours. Staff.

51 International Relations The state as actor in international relations. Global divisions and problems. Three hours. Hilberg, Kinnard, Pacy.

71 Comparative Political Systems An examination of contrasting patterns of political development, the role played by political culture, politics in elected and non-elected regimes. Three hours. Flannery.

81 Political Behavior An analysis of how people react to political situations and the ways in which their behavior may be understood. Three hours. Brewer, Nelson.

96 Seminar Selected topics in political science. Three hours. Staff.

171 Western European Political Systems An examination of the British, German, and French political systems. Three hours. Staron.

172 Russian and Eastern European Political Systems An examination of the Russian and some other Eastern European Communist political systems. Three hours. Staron.

173 Canadian and Commonwealth Governments Emphasis on Canada and Commonwealth cooperation. Three hours. Haugen.

174 Latin American Political Systems Analysis of the formal and
informal political structure of Latin American states with emphasis upon contemporary developments. Three hours. Gould.

175, 176 **Asian Political Systems** The development of political institutions and processes in the 20th century with brief historical introductions. First semester: East Asia. Second semester: South and Southeast Asia. Three hours. Little.

179 **Contemporary Jewry** Emancipation in the diaspora; annihilation under the Nazi regime; the establishment of Israel and its wars with Arab states. Three hours. Hillberg.

181 **Political Leadership** Methods of identifying leaders, their relationships with non-leaders and with one another, their impact on public policy, and their personalities and social backgrounds. Empirical theories about political leadership. Three hours. Nelson.

193, 194 **College Honors**

195, 196 **Special Topics**

197, 198 **Readings and Research**

211, 212 **History of Political Thought** First semester: development of political thought from Plato to Burke. Second semester: Political thought of the 19th and 20th centuries with emphasis on socialist ideologies from Marx to Marcuse. **Prerequisite:** Six hours in political science. Three hours. Staron.

213 **Contemporary Political Thought** A discussion of the writings of several twentieth-century political thinkers, including writings in related fields such as psychology and economics. **Prerequisite:** Six hours in political science. Three hours. Wertheimer.

216 **American Political Thought** American political thought from the colonial period to recent times. **Prerequisite:** Six hours in political science. Three hours. Simon.

221, 222 **Constitutional Law** First semester: judicial review, federalism, citizenship and suffrage, taxing power, commerce power. Second semester: Bill of Rights, Due Process, Equal Protection. **Prerequisite:** Junior standing. Three hours. Gould.

226 **Administrative Law** The politics of federal regulation, regulatory agencies and processes, and leading constitutional cases in administrative law. Alternate years. **Prerequisite:** Six hours in political science. Three hours. Rosenbloom.

227, 228 **International Law** Principles and applications of public international law. **Prerequisite:** Six hours in political science. Three hours. Little.

231 **The Legislative Process** Congressional and parliamentary organization and procedure. **Prerequisite:** Six hours in political science. Three hours. Haugen.

232 **Lawmaking and Public Policy** Influence of the executive and problems of congressional and parliamentary control. **Prerequisite:** Six hours in political science. Three hours. Haugen.

233 **The National Executive** Analysis of the functions and organizations of the Presidency and the bureaucracy in American national government. **Prerequisite:** Six hours in political science. Three hours. Rosenbloom.
235 Defense Politics U.S. defense politics, policies, and processes. Civil-military relations, strategic policy, arms control, defense-industrial complex, defense budget. **Prerequisite:** Six hours in political science. Three hours. Kinnard.

239 American Politics An examination of the politics of decision-making in the American political system. **Prerequisite:** Six hours in political science. Three hours. Simon.

241 Public Administration Administrative theory and the operation of public bureaucracies. **Prerequisite:** Six hours in political science. Three hours. Rosenbloom. Alternate years.

242 Problems of Bureaucracy The political problems of the administrative state. **Prerequisite:** Six hours in political science. Three hours. Rosenbloom.

250 Craft of Diplomacy Emphasis on experiences and reflections of diplomatic personalities, supplemented by studies of specialists. **Prerequisite:** Six hours in political science. Three hours. Pacy.

251, 252 American Foreign Policy First semester: constitutional principles, institutional factors, and historic traditions in the formation of foreign policy. Second semester: contemporary policies toward specified countries. **Prerequisite:** Six hours in political science. Three hours. Kinnard, Hilberg.

256 International Organization Theory and practice in supranational institutions. **Prerequisite:** Six hours in political science. Three hours. Pacy.

257 Political Geography See Geography 257. Three hours. Miles.

258 Problems of Communism See Economics 258. Three hours. Dellin.

261 Urban Government and Politics An analysis of metropolitan areas in terms of their governments, problems, and roles. **Prerequisite:** Six hours in political science. Three hours. Staff.

262 Urban Public Order Urban crime as a political issue. Institutions of crime control. Urban police systems and law enforcement. **Prerequisite:** Six hours in political science. Three hours. Grabosky.

264 State Administration Problems in planning, policy development and program coordination. **Prerequisite:** Six hours in political science. Three hours. Haugen.

265 Intergovernmental Relations Problems of the Federal system. National-state-local cooperative administration of selected public functions. **Prerequisite:** Six hours in political science. Three hours. Haugen.

273 Comparative Political Analysis Selected topics. **Prerequisite:** Sophomore standing. Three hours. Flannery.

274 Ethnic Politics Theories of ethnic group identification, ethnic roots of political behavior, impact of ethnicity on the political structure. **Prerequisite:** Six hours in political science. Three hours. Frankovic.

276 Masses and Elites Structural and attitudinal linkages between governors and governed. The impact of integration or isolation on the political
system. Discussion of modern as well as more traditional societies. **Prerequisite:** Permission of the instructor. Three hours. Brewer.

**277 Soviet Politics** See History 277. Three hours. Daniels.

**278 Foreign Policy of the USSR** Emphasizing post 1960 developments. **Prerequisite:** Junior standing or consent of instructor. Three hours. Flannery.

**281 Political Parties** Analysis of political parties with special emphasis upon voting behavior and campaign techniques. **Prerequisite:** Six hours in political science. Three hours. Nelson.

**283 Scope and Methods of Political Science** Approaches, sources of information, research methods and systematization in the study of political phenomena. Open to graduate students or by permission of instructor. Three hours. Grabosky.

**291, 292 Readings and Research** For advanced undergraduates and graduate students. Three hours. Staff.

**295, 296 Seminar** Selected topics in Political Science. **Prerequisite:** Six hours in political science. Three hours. Staff.

---

**Psychology**

**COLLEGE OF ARTS AND SCIENCES**

*Professors Albee, Ansbacher, Burchard, Forgays, Joffe, Lawson, Leitenberg; Associate Professors, Hasazi, Howell, Musty (Chairman); Assistant Professors Dunn, Gordon, Kapp, Kent, Kessler, Leff, and Rolf; Adjunct Assistant Professors Dietzel, Does; Visiting Assistant Professor Damkat.*

**1 General Psychology** Introduction to the entire field, emphasizing the normal adult human being. Three hours. Forgays, Albee, Musty.

**100 Behavior Modification** A survey of techniques for the manipulation and control of human behavior, and evaluation of their effectiveness. **Prerequisite:** 1. Three hours. Leitenberg, Burchard.

**109, 110 Principles of Psychological Methodology and Research (2-4)** This course prepares students to understand and to do competent research in a variety of areas of psychology. The focus is upon designs, methodologies, and statistical procedures essential for psychological research. Laboratory experiences are included. **Prerequisite:** 1. Four hours. Gordon, Lawson, Joffe.

**119 Systematic Psychology** A comparative study of the leading contemporary schools of psychological thought. **Prerequisites:** 1, sophomore standing. Three hours. Lawson.

**121 Biopsychology** Principles of the biological bases of behavior are introduced through classical and contemporary issues in field, including an introduction to the nervous system, physiological and behavioral effects of drugs, chemical bases of behavioral disorders, hormonal control of behavior, intercerebral disorders of behavior, voluntary control of bodily functions, and
possible physiological bases of extrasensory perception. **Prerequisite:** 1. Three hours. Kapp, Musty.

130 **Social Psychology** A psychological approach to social phenomena with emphasis on the concepts and methods used in the study of the behavior of individuals in various social situations. **Prerequisite:** 1. Three hours. Leff, Kent.

150 **Personality** Individual and life problems from the field-theoretical and phenomenological approach with emphasis on Alfred Adler’s viewpoint. **Prerequisite:** 1. Three hours. Ansbacher, Kessler.

151 **Child Psychology** Behavioral development of the child from conception to adolescence. Emphasis is on basic learning processes and their relationship to selected aspects of development. **Prerequisite:** 1. Three hours. Dunn.

152 **Abnormal Psychology** The more unusual mental processes; methods of observing them and interpreting them; their bearing on our understanding of the normal mind. **Prerequisite:** 1. Three hours. Dunn.

193, 194 **College Honors**

195, 196 **Special Topics**

197, 198 **Research** Individual research under staff direction. **Prerequisite:** Departmental permission. Three to six hours. Staff.

200 **Advanced Behavior Modification** Application of technique for the manipulation and control of human behavior in a variety of educational and social situations involving the collection and analysis of behavioral data. **Prerequisite:** 100. Three hours. Burchard, Hasazi.*

205 **Learning** Basic laws of the learning process as revealed by controlled experiments. Laboratory experiences are provided and students may undertake original experiments. Three hours. Howell.*

206 **Motivation and Emotion** Nature and development of motives, emotions and their relation to other psychological processes. Three hours. Joffe.*

210 **Sensory Perception** An introduction to the sensory basis of perception. Emphasis is on methodology and research literature; development of an original experiment. Three hours. Lawson.*

220 **Comparative Psychology** Behavior of animals under controlled experimental conditions and in their natural environments. Consideration of behavior similarities and differences at various levels of the phyletic scale. Three hours. Joffe, Kapp.*

221 **Physiological Psychology I** The structure and function of the mammalian nervous system, with emphasis upon neurological correlates of behavior and receptor mechanisms. Individual laboratory experience. Four hours. Lawson, Musty.*

222 **Physiological Psychology II** The study of the role of central nervous system mechanisms in the determination of innate behavior, arousal, internal inhibition, and learning. Individual laboratory experience. **Prerequisite:** 221. Four hours. Kapp, Staff.*

230 **Experimental Social Psychology** Advanced survey covering current research in various fields of social psychology. Three hours. Leff, Kent.*
Environmental Psychology  An exploration of the interaction of natural and built environments with human behavior, cognition, and emotion. Special emphasis on how people may increase their ecological awareness and environmental enjoyment, both by changing themselves and by working constructively with their environments. **Prerequisite:** 110 or strong background in environmental studies or permission of instructor. Three hours. Leff.*

**236 Thinking**  A critical review of the experimental investigation of thought processes. Three hours. Gordon, Howell.*

**251 Behavior Disorders of Childhood**  Covers a wide range of topics from brain damage to childhood psychoses and nightmares. Each problem behavior will be considered in the context of normal child development. Three hours. Rolf, Hasazi.*

**252 Introduction to Clinical Psychology**  This course is a study of the basic principles of interviewing, testing, assessment from life situations, and report writing. There is an examination of the most common approaches to psychotherapy, such as the client-centered, habit change, cognitive change, emotional change, interpersonal relations, and group therapy approaches. Three hours. Kessler.*

**281-282 Seminar**  Review and discussion of current psychological research. One hour. Staff.*

**295,296 Contemporary Topics**  Three hours. Staff.*

*Note: All courses numbered 200 or above have 1, 109, 110, and 119 as prerequisites, or require permission of the instructor.

### Radiologic Technology

**SCHOOL OF ALLIED HEALTH SCIENCES**

**Assistant Professor Izzo (Chairperson); Lecturers Falby, Marschke, Patch, Randall; Adjunct Instructors Lacasse, Cunningham, Lessard.**

**1, 2 Clinical Orientation (1-2)**  Lectures, laboratories, and independent study to prepare students for patient interaction handling, ethical conduct, basic technical skills. **Prerequisite:** Enrollment in Radiologic Technology. Two credits each. Staff.

**3, 4 Clinical Practicum (0-4)**  Observation and participation in the Radiology Department of the Medical Center Hospital of Vermont. **Prerequisite:** Enrollment in Radiologic Technology. One credit each. Staff.

**12 Introductory Radiologic Science (3-0)**  Introduction to basic principles of ionizing radiation, and protection methods for personnel and patients. **Prerequisites:** Physics 3 and Math 9. Three credits. Izzo, Marschke.

**14 Radiopathology (3-0)**  Study of etiology and radiographic manifestations of non-neoplastic pathology. **Prerequisites:** 1 and Anatomy 9. Three credits. Falby, Faculty from Radiology Dept. (Spring ’78).

**31 Radiographic Science (3-0)**  Study of principles and methods of obtaining optimum radiographs, including topics of x-ray film and processing,
image formation, tomography. Prerequisite: 12. Three credits. Falby, Randall.

33, 34 Radiographic Techniques (2-2) Lecture, demonstration, and independent study of techniques for accurate patient positioning to obtain optimum radiographic visualization; includes special procedures. Prerequisites: Anatomy 9 and RT 2 for 33. Three credits each. Falby, Randall, Patch.

41 Nuclear Medicine Technology (3-0) Study of radiopharmaceuticals and clinical techniques for determination of pathology related to body structure and function. Prerequisite: Physiology 10. Three credits. Izzo, Clements.

42, 44 Nuclear Medicine Technology (2-2) Study of atomic structure, principles of radioactivity, solid and liquid scintillation detectors, thermoluminescent dosimetry, statistics. Prerequisites: Anatomy 9 and RT 2 for 33. Three credits each. Falby, Randall, Patch.

51, 52 Radiation Therapy Technology (2-2) Study of physical principles and clinical techniques involved in the therapeutic use of ionizing radiation for malignant disease; including treatment planning, computer techniques, and dosimetry. Prerequisites: 12 for 51, 51 for 52. Three credits, four credits. Marschke.

54 Clinical Oncology (3-0) Study of various types of malignant neoplasms and the methods of treatment. Prerequisites: Anatomy 9 and sophomore standing. Three credits. Marschke.

71, 72 Senior Clinical Practicum Continuation of RT 1, 2 in the field of specialization. Variable credits. Staff.

91, 92 Special Radiologic Projects Independent projects under the direction of faculty members. Prerequisite: Permission of the faculty. Variable credits.

175 Introduction to Radiation Physics and Radiobiology A general information course for researchers, laboratory technicians and other interested students and faculty. Prerequisite: Consent of the instructor. One credit. Marschke.

191, 192 Advanced Radiologic Projects Independent projects under the direction of faculty members. Prerequisite: Permission of Department Chairman. Variable credits.

Recreation

SCHOOL OF NATURAL RESOURCES
Associate Professors Gilbert (Program Leader), Lindsay; Lecturers Baker Flinn, Hudspeth, and Koenemann.

8 Freshman Recreation Seminar An introduction to the field of natural resource based recreation. A broad perspective of recreation management obtained through lectures and student reports on agencies, policies, history and trends. Two hours. Staff.
135 **Forest Recreation Planning**  The planning of large wild land areas for outdoor recreation use with special emphasis on forest environments. *Prerequisites:* Junior standing and permission. Three hours. Staff.

140 **Park Protection**  Management methods used to direct public use and control environmental impacts in park and outdoor recreation areas. *Prerequisites:* 135 and 137. Three hours. Staff.

150 **Recreation Management**  Field experience in recreation planning, design, and resource measurement. *Prerequisite:* CE 12. Three weeks in the summer completing the sophomore year. Four hours. Flinn, Lindsay, Gilbert.

151 **Tourism Business Management**  Economic decision-making for recreation or tourism business management. Emphasis on analysis of business investment and profitability over the recreation firm life. *Prerequisite:* Permission of the instructor. Three hours. Bevins. Credit cannot be granted for both 151 and RSEC 166.

153 **Recreation Administration and Operations**  The administration and operation of public outdoor recreation areas. Special emphasis on recreation administrative structures, personnel management and the maintenance of parks and outdoor recreation areas. *Prerequisites:* Senior standing and permission. Three hours. Baker, Lindsay.

154 **Recreation Policy Formulation**  The initiation, formulation and implementation of public outdoor recreation resource policy. *Prerequisites:* Senior standing and permission. Three hours. Koenemann.

155 **Park Interpretation**  Discussions and application of the principles and techniques used to communicate values, natural systems, and cultural features to park visitors. Exposure to the collecting, analysis, planning, construction and use of interpretive media and related outdoor facilities. *Prerequisites:* Senior standing and permission of the instructor. Three hours. Hudspeth.

157 **Ski Area Management**  An analysis of current management problems affecting private ski areas in Vermont and the Northeast. *Prerequisites:* Senior standing and permission. Three hours. Gilbert.

159 **Participation in Recreation Management**  Supervised field experience in national, state, urban or private park and recreation operations. *Prerequisites:* Junior standing and permission. Three hours. Gilbert.

182 **Senior Recreation Seminar**  In-depth seminars on current problems in the field of public and private outdoor recreation management. *Prerequisites:* Senior standing and permission of the instructor. Two hours. Gilbert.

188 **Special Topics**  Readings, investigations, and lecture-discussions in selected areas of recreation management. *Prerequisites:* Junior standing and permission. One to three hours. Staff.

Religion

COLLEGE OF ARTS AND SCIENCES

Professor Kahn; Associate Professors Andrews, Martin and Paden (Chairman); Assistant Professors Brenneman, Gussner, Sugarman, Swanson, and Yarian.

21 Introduction to the Study of Religion: Asian Traditions
Introduction to the Hindu, Buddhist, and East Asian religious traditions as expressed in their basic symbolisms, writings, practices, and cultural forms. Three hours. Staff.

22 Introduction to the Study of Religion: Western Traditions
Study of the basic motifs, mythic patterns, and historical transformations in the religious life of man from the ancient Near East to the modern West. Three hours. Staff.

71 The Interpretation of Religion
Examination of major theories and methods used in studying and interpreting religious phenomena. Prerequisite: 21 or 22. Three hours. Staff.

101 Church, Cult and Totem: The Social Forms of Religious Life
Comparative study of the communal forms of religious life, such as cosmic state, monasticism, sect, caste and denomination, from a variety of cultures — Eastern, Western, tribal, and modern — with a concern for their meanings as fundamental forms of religious expression. Prerequisite: Three hours in religion or sociology. Three hours. Andrews, Gussner.

104 Mysticism, Shamanism, and Possession
A comparative study of the ways in which the inward dimension of religious life finds expression. Prerequisite: Three hours in religion. Three hours. Staff.

108 Myth, Symbol, and Ritual
Study of the patterns and significance of myth and ritual as they appear in cross-cultural perspective, with reference to contemporary interpretations of symbol and language. Prerequisite: Three hours in religion. Three hours. Staff.

111 Foundations of Western Religious Thought
Study of ways in which Western religious thinkers — in both Greek and Biblical traditions — have expressed and responded to philosophical-theological questions about the nature of man, world, and God. Prerequisite: Six hours in religion. Three hours. Sugarman, Yarian.

114 Hebrew Scriptures
Study of the history and writings of the Hebraic-Judaic religion to the first century B.C. Prerequisite: Six hours in religion. Three hours. Kahn, Sugarman.

116 Judaism
An investigation of the sustaining rituals, customs, institutions, and beliefs of normative Judaism. Prerequisite: Six hours in religion. Three hours. Kahn, Sugarman.

120 Primitive Christianity
The origin and nature of early Christianity with emphasis on the New Testament writings. Prerequisite: Six hours in religion. Three hours. Martin.

122 Modes of Christian Expression I: Catholicism
A study of the teaching, rites, art and piety of Eastern Orthodox and Roman Catholic Christianity. Prerequisite: Six hours in religion. Three hours. Yarian.
123 Modes of Christian Expression II: Protestantism A study of Protestant Christianity focusing on its orientation to the Word and its responses to developments formative of modern Western culture. **Prerequisite:** Six hours in religion. Three hours. Yarian.

128 Religion in America A study of the relationship between religion, the cultural ethos, and individual self-understanding in America. **Prerequisite:** Six hours in religion, including 22. Three hours. Martin.

131 Studies in the Hindu Tradition Selected writings, rituals, and developments in the Hindu tradition with reference to cultural assumptions of India. **Prerequisite:** Six hours in religion, including 21. Three hours. Gussner.

132 The Buddhist Tradition Selected texts, disciplines, and doctrinal developments in Indian, Tibetan, and Chinese Buddhism. **Prerequisite:** Six hours in religion, including 21. Three hours. Andrews, Gussner.

141 Religion in Japan The religion of shrine and temple, of Shinto and Buddhism, and their interaction with the rich folk traditions of Japan. **Prerequisite:** Six hours in religion, including 21. Three hours. Andrews.

145 Religion in China An examination in historical context of the Confucian, Taoist, and Chinese Buddhist traditions from a variety of interpretive perspectives, both Chinese and Western. **Prerequisite:** Six hours in religion, including 21. Three hours. Andrews.

161 'Primitive' religions A study of the religiousness of man and its external expressions in small-scale hunting and planting societies, with reference to anthropological, sociological, and psychological contributions to the subject. **Prerequisite:** Six hours in religion, or three hours in religion and three hours in anthropology. Three hours. Gussner.

162 Studies in Cultural Lore An examination of the loric dimensions of the sacred. A look into the little places that disclose those elements and qualities that define the particularity of a given culture, as expressed in tale, legend, festival, custom, craft, and architecture. **Prerequisite:** Six hours in religion, or three hours in religion and three hours in folklore studies. Three hours. Brenneman.

165 Religion and Secular Culture The effects of modern culture on religion, and the emergence of new forms of religious life and expression. **Prerequisite:** Six hours in religion. Three hours. Brenneman, Sugarman.

168 Contemporary Spiritual Life Study of man's involvement with the Spiritual as manifested in contemporary religious groups, or in modern theory and practice of meditation. **Prerequisite:** Six hours in religion. Three hours. Gussner.

175 Art and the Sacred A cross-cultural study of the role and meaning of visual objects and images which are religious expression themselves or are in important ways related to religious experience, e.g., in the creative process and worship. **Prerequisite:** Six hours in religion, or three hours in religion and three hours in art. Three hours. Yarian.

180 Philosophy of Religion **Prerequisite:** Six hours in religion. Three hours. See Philosophy 135.

185 Rise of Islam **Prerequisite:** Three hours in religion. Three hours. Engroff. See History 117.

187 Tao Te Ching **Prerequisite:** Six hours in religion, including 21. Three hours. Swanson. See Philosophy 221.
188 I Ching or Book of Changes  Prerequisite: Six hours in religion, including 21. Three hours. Swanson. See Philosophy 222.

193, 194 College Honors

195, 196 Special Topics

197, 198 Readings and Research  Variable credit.

201 Senior Seminar: Creative Hermeneutics  Workshop in theory and method incorporating current developments in the field. Prerequisites: Twelve hours in religion, including 71; senior standing. Three hours. Staff.

214 Studies in Judaica  Selected topics of concentration emerging out of and related to the study of normative Judaism, e.g., the prophetic faith, Rabbinic Judaism, Hasidism, and Jewish mysticism. Prerequisite: Nine hours in religion (116 recommended). Three hours. May be repeated up to six hours. Sugarman.

226 Studies in Hellenistic Religion  A study of religion in the Mediterranean area during the period from the second century B.C. through the second century A.D. Prerequisite: Nine hours in religion. Three hours. Martin.

228 Studies in Western Religious Thought  Important figures, issues, movements or texts will be selected for special examination. Prerequisite: Nine hours in religion. Three hours. May be repeated up to six hours. Sugarman, Yarian.

280 Symbol and Archetype  A study of the work of C. G. Jung and the Jungian circle as it bears upon the interpretation of religion and as it represents a twentieth-century religious quest. Prerequisite: Nine hours in religion. Three hours. Martin, Paden.

291, 292 Topics in the History and Phenomenology of Religion  Prerequisites: Nine hours in religion; junior standing. May be repeated up to six hours. Staff.

297, 298 Interdisciplinary Seminar  Student-faculty workshop on a topic of current interest, employing resources from various disciplines. Prerequisites: Nine hours in religion; junior standing, and permission of instructor. Three hours. Staff.

Resource Economics

SCHOOL OF NATURAL RESOURCES
Professor Sargent; Associate Professor Gilbert; Adjunct Associate Professor Bevins.

61 Principles of Agricultural and Resource Economics  Introduction to principles of economics through the analysis of problems of agricultural production and resource development. Three hours. Staff.

197, 198 Senior Research  Work on a research problem under the direction of a staff member. Findings submitted in written form as prescribed by the department. Prerequisite: Senior standing. Three hours. Staff.
205 Rural Communities in Modern Society The changing structure and dynamics of rural social organization in the context of modernization, and urbanization. Emphasis on rural communities in America. Three hours. Finney, Schmidt.

207 Community Organization and Development Community as a changing complex of organization within modern society. Special attention will be given to problems of the formulation and implementation of alternative change strategies. Three hours. Schmidt.

222 Natural Resources Evaluation A critical investigation of current research, allocation procedures, and methods of analysis in natural resource economics with emphasis on the public sector. Prerequisite: 121. Three hours. Schmidt.

230 Urban Planning Techniques (3-0) Theories on the size, spacing, and functions of cities; economic, social, and physical determinants of various land use elements; basic studies for urban planning; and the process of land use planning including location and space requirements and the development of the land use plan. Prerequisite: Senior or graduate standing. Three hours. Dawson, Oppenlander.

231 Urban Planning Analysis (3-0) History and development of urban planning; approaches to planning with attention to city design and appearance, quantitative methods in planning, and social welfare planning; plan implementation; organization and administration of planning agencies; and financial planning. Prerequisite: Senior or graduate standing. Three hours. Oppenlander.

232 Community Design Basic principles and methods of planning and designing the total community; site selection; and elements of physical layout and design. Design projects dealing with community elements such as subdivisions, industrial parks, new towns, etc. Three hours. Oppenlander.

233 Regional Planning Delineation of regional boundaries, determination of public goals, tools of planning, rural environmental planning and the legal and political process of planning. Prerequisite: Senior standing and Economics 11, 12, or equivalent. Three hours. Sargent.

234 Advanced Regional Planning Concepts of environmental planning with special emphasis on economic base analysis, resource base analysis, and economic impact studies. Each student will participate in a municipal or regional planning project. Prerequisite: 233 or consent of instructor. Three hours. Sargent.

235 Legal Aspects of Planning and Zoning An examination of Vermont planning and zoning law with comparisons with other states. Cases in planning and zoning and land use controls. Prerequisite: Senior standing or consent of instructor. Three hours. Ewing.

243 Spatial Analysis The analysis of spatial pattern and interaction in geography through quantitative models. An introduction to measurement, sampling and covariation within a spatial framework. Prerequisites: Six hours in geography or other social sciences. Three hours. Leinbach.

255, 256 Special Topics in Resource Economics Readings and discussion of selected topics in economics at an advanced level. Prerequisite: Departmental permission. Credit as arranged. Staff.
Romance Languages

COLLEGE OF ARTS AND SCIENCES
Professors Ugalde (Acting Chairman) and Weiger; Associate Professors Crichfield, T. Geno, Julow and Zárate; Assistant Professors Benoi, Carrard, Murad, Wesseling, Whatley, Whitebook and Wiley-Sandler; Lecturer M. Geno.

French and Spanish language and literature courses are listed separately below by title and number. The language sequences are designed specifically to train students in the four skills of speaking, comprehension, reading, and writing. The total sequence in each language represents a continuum into which a student with previous experience in the language will be placed according to his level of achievement, regardless of how many or how few years he may have studied it. For placement in advanced language courses (100 or above), first-year students should consult with this department. Those who have already taken courses here should simply follow the levels represented by the number sequences, 1-99, 100-199, etc. For convenience, we offer the following guidelines for placement in elementary and intermediate; in all cases of doubt students should seek the advice of this department.

N.B. The curriculum in French and Spanish as described below has been extensively revised. These revisions will become operative in the spring term (January 1977). For the fall term students should consult only the “Schedule of Courses, Fall, 1976.”

French Language

1-2 Elementary For students who have had no previous study or less than two years of high school French. The fundamentals of French pronunciation, speaking, reading, and writing are taught by use of dialogues, drills, some lab work, and short written assignments. Participation in class activities is essential. Students with more background in French should enroll in 09 or 51. French 1-2 is a two-semester course. Eight hours. Wiley-Sandler, Staff.

09 Basic French Review Grammar The primary aim of this course is to give students a solid review of French grammar at the second-year level through the use of oral pattern drills, dialogues, short reading passages, written exercises, and work in the language laboratory. Three hours. Staff.

51, 52 Reading and Conversation Intermediate French is designed to help students speak better and to progress from a basic knowledge of French to the ability to read and understand spoken French well. The reading material in some sections is drawn from writers from France, while other sections base discussions on writings and material from French Canada. Three hours each course. Staff.

101, 102 Composition and Conversation Conversational French with frequent practice in writing. Reading of texts about contemporary French attitudes and problems, French newspapers and magazines, oral presentations, skits and games with vocabulary building an important goal. A written assignment per week. Three hours each course. Staff.

201, 202 Advanced Composition and Conversation The purpose of this course is to improve both written and oral proficiency. The textbook for the course is not followed closely. It is rather the responsibility of the group to suggest projects and discussions and to prepare topics for the class. Three hours each course. Staff.

209 Advanced Grammar Designed to help the student progress from an average workable knowledge of French grammar to a much more sophisticated level
of speaking and writing French. Treats the general structure of the language with attention to those aspects of special concern to American students. Written and oral exercises are employed to facilitate understanding and retention of all points of grammar discussed. Three hours. M. Geno.

210 Romance Philology Phonological and morphological development of French, Spanish and Italian from their Latin origins, with emphasis on study of existing documents. Prerequisites: Junior standing and intermediate level in at least two of the languages (French, Latin, Spanish, Italian), or permission of the instructor. Course will be taught in English. Three hours. Whitebook. Alternate years, 1978-79.

215 Methods of Text Analysis An introduction to procedures and terminology used in the analysis of texts of various genres. Three hours. Carrard.

216 Stylistics On a comparative basis, study of the main idiomatic difficulties faced by English-speaking people who learn French; translation; analysis of the various "levels of speech" in French, with their stylistic features. Three hours. Carrard.

Spanish Language

1-2 Elementary For students who have had no previous study or less than two years of high school Spanish. The fundamentals of Spanish pronunciation, speaking, reading and the structure of the basic Spanish sentence. Three hours per week of classroom practice and discussion supplemented by 2 required language lab. periods for additional oral practice. Students with more background in Spanish should enroll in 09 or 51. Spanish 1-2 is a two-semester course. Eight hours. Ugalde, Staff.

09 Basic Spanish Review Grammar An intensive review of the fundamentals of Spanish grammar. Abundant oral exercises. Designed to enable the student to proceed to an Intermediate Reading and Conversation course. Three hours. Staff.

51, 52 Intermediate Reading and Conversation The emphasis in this course is on reading. Several modern Spanish texts will be read for content and discussed in Spanish. Students will be asked to write simple descriptive paragraphs based on these texts, chosen for each section by the instructor who teaches it. A small part of the time may be used for topical grammar review. It is recommended that this course be taken after Spanish 09 or together with it. Three hours each course. Staff.

101, 102 Composition and Conversation The course offers writing practice, sentence structure, correct expression and guided discussions in Spanish of assigned relevant topics. There will be a written assignment per week. Students are expected to have a good command of basic grammar. Three hours each course. Wesseling.

201, 202 Advanced Composition and Conversation The purpose of this course is to improve both written and oral proficiency. A textbook, supplemented by materials on topics of current interest, provide the basis for panel discussions, debates, translation and a weekly composition. Three hours each course. Ugalde.

209 Advanced Grammar An in-depth study of Spanish grammar, its rules and practices, going beyond conventional good usage into the reasons and theories for same. Three hours. Ugalde.
Literature Courses in French and Spanish

As the language courses offer a continuum for the learning of the four skills, the literature courses provide a sequential study of the development of French and Spanish literatures from the Middle Ages to the present. In addition, they offer both practice and continued training in the four language skills. While the literature courses are divided into centuries, with subcategories of genres, themes, and individual authors, it is not essential to adhere strictly to chronological order. IN GENERAL, A ONE HUNDRED LEVEL LITERATURE COURSE OR ITS EQUIVALENT IS THE PREREQUISITE FOR ALL OTHER LITERATURE COURSES: EXCEPTIONS ARE REGULARLY MADE WITH THE APPROVAL OF THE DEPARTMENT. Unless otherwise stated, all courses above the intermediate level will be conducted in the foreign language in question. Questions about the precise content of any literature course should be referred to the instructor listed for the course or to the department chairman.

French Literature and Civilization

155, 156 Masterworks An overview of French literature (155: Middle Ages to the Revolution; 156: 19th and 20th centuries) through reading of outstanding works representing major authors, periods, themes and forms. Study of the cultural and historical context of the works as well. Prerequisite: Intermediate French (French 51 or 52 or equivalent). Three hours each course. Crichfield.

175 French Humor Analysis of theories of humor; comparison of French and American styles of humor. Authors from the standard repertory such as Rabelais, Molière, Feydeau, Voltaire, Camus, Ionesco; medieval farces; great modern humorists such as Cami, Allais, Pierre Dac, Sempé, Lautréamont, Daninos. Three hours. Whitebook. Alternate years, 1978-79.

193, 194 College Honors

195, 196 Special Topics

197, 198 Readings and Research

225, 226 Medieval French Literature (1100-1500) Lectures and readings on aspects of Medieval culture, history, philosophy, and their relation to the literature of the period. 1st semester: Old French language; major 12th century epics, e.g., La Chanson de Roland, Le Pèlerinage de Charlemagne, La Chanson de Guillaume; Breton lays; Marie de France. 2nd semester: Prerequisite: 1st semester.. Romances of the 12th and 13th centuries: Chrétien de Troyes, Guillaume de Lorris and Jean de Meung; lyric poetry, 12th to 15th century: Bernard de Ventadorn; Guillaume de Machaut; Christine de Pisan; Charles d'Orléans; François Villon; Theatre: Rutebeuf and various farces and miracle plays. Three hours each course. Whitebook. Alternate years, 1977-78.

235 16th Century France: A World in Transition The 16th Century as a pivotal era between medieval and modern society, focusing on literary and esthetic movements, related to their historical and social contexts. Texts presented will illustrate the changing attitudes towards man and his place in the world. Some topics to be covered include: the new nationalism, the educational reforms, Rabelais and the conteurs, the emergence of the "Renaissance man," the Pleiade poets, the Lyons school of poetry, religious ferment and the
civil wars, Montaigne, the baroque period. Three hours. Wiley-Sandler. Alternate years, 1976-77.

236 The Developing Renaissance in France The cultural, historical, social and esthetic origins of Renaissance ideals, their development through the years 1530-1560, the breakdown of their influence, and some of their lasting effect in French thought. Among the topics to be covered: Humanism, the Italian influence, classical models and imitation, educational reforms, women writers, Rabelais, Du Bellay, Sceve, Ronsard, Montaigne. Three hours. Wiley-Sandler. Alternate years, 1976-77.

245 The Baroque Age 1600-1650 A study of the literature after France's religious civil wars, up to the triumph of classicism. Readings may include religious, lyric and political poetry; idealistic, picaresque and fantastic novels; Corneille and Rotrou; the *Pensees* of Pascal. Three hours. Whatley. Alternate years, 1976-77.

246 17th Century Selected works of the Century with emphasis on Corneille, Racine and Molière. Three hours. Julow. Alternate years, 1976-77.

255 18th Century Literature Readings in writers of the early 18th century such as Bayle, Fontenelle, Montesquieu, Marivaux, Prévost, Voltaire. Topics to be treated might include: the impact of the new science on thought and art; the reflection in literature of new social types; the "pursuit of happiness"; the early evolution of the novel. Three hours. Whatley. Alternate years, 1977-78.

266 The Second Empire through 1900 The rise of modern literary realism, Naturalism, Symbolist poetry, Decadence. Authors will include Flaubert, Zola, Maupassant, Baudelaire, Verlaine, Rimbaud, Mallarmé, Huysmans. Topics may include the image of *la bourgeoisie*, the theme of Paris vs. *la Province*, symbolism and Impressionist painting and music, the influence of Positivism on the novel, and others. Three hours. Julow. Alternate years, 1977-78.

277 Topics in 20th Century French Theatre Subjects may include:
1. *le théâtre traditionnel*: Claudel, Sartre, Giraudoux, Salacrou, Anouilh, etc.
2. *le théâtre "De l'absurde"*: Ionesco, Beckett, Genet, Arrabal, etc.
3. *le théâtre de la marge*: Ghelderode, Pinget, Vian, Shéhadé, Audiberti, etc.
4. *la vision totale*: a combination of all the above.
Each may be repeated up to six hours. Three hours. T. Geno. Alternate years, 1976-77.

285 **Literature of the French of North America** An analysis of the French novel of North America as it relates to the socio-cultural and ecological contexts of the French of North America (cultural values, social structures and human aspirations in the rural and urban contexts). Three hours. Benoit. Alternate years, 1976-77.

286 **Literature of the French of North America** A study of the French novel, poetry and theatre of North America in so far as they depict the psychology of the individual in relation to the socio-cultural and ecological contexts. Three hours. Benoit. Alternate years, 1976-77.

289 **African Literature of French Expression** A study in *La Francophonie* drawing our attention to Africa by way of the Antilles and the USA. A survey of oral literature, poetic expression, theatrical expression and the novel seen through the culture and civilization of Africa’s past and present and through the influence of France’s colonial empire. Authors studied will include: Senghor, Damas, Césaire, Fanon, Diop, Oyono, Kane. Three hours. T. Geno. Alternate years, 1977-78.

291 **Civilization of France** A study of the geographical, political, social, economic and intellectual development of France from the Middle Ages to the present. Three hours. M. Geno.

293 **French Civilization of North America** From the French empire of the seventeenth century to Québec separatism of the 1960’s this course examines the sociocultural, ecological and psychological meaning of being French in North America. Material studied is drawn from the areas of cultural history, architecture, literature, language, the popular arts, song, folk traditions and painting. Three hours. Benoit. Alternate years, 1977-78.

295, 296 **Advanced Special Topics**
297, 298 **Advanced Readings and Research**

**Spanish Literature and Civilization**

155 **Masterworks** Representative novels, plays, poetry of the period before 1800. Lectures on significance of content and on the cultural, political and social background of the material; open discussion part of the time. *Prerequisite*: Intermediate Spanish or instructor’s permission. Three hours. Wesseling. Alternate years, 1976-77.

156 **Masterworks** Representative plays, novels, poetry since 1800. Lectures on significance of content and on the background of the material: open discussion part of the time. Requirements: two exams, four essays on aspects of the material read, in Spanish. Three hours. Wesseling. Alternate years, 1976-77.

185 **Readings in Spanish American Literature** A survey of the literature of Spanish America from pre-Columbian times through the colonial period and Romanticism. Three hours. Murad, Zárate. Alternate years, 1976-77.

193, 194 College Honors
195, 196 Special Topics
197, 198 Readings and Research

235, 236 Golden Age The picaresque novel, the drama and poetry of the 16th and 17th centuries, with emphasis on Lope de Vega, Calderón, Quevedo, Tirso de Molina. Three hours each course. Weiger. Alternate years.

245, 246 Cervantes Don Quijote, the Novelas Ejemplares, and the theatre of Cervantes. Three hours each course. Weiger. Alternate years, 1977-78.

276 The Reawakening in the 20th Century Origins and main aspects of the intellectual conflicts in modern Spain as reflected in the literary works from the “Generation of 1898” to the present. Three hours. Ugalde. Alternate years, 1977-78.

285, 286 Spanish-American Literature of Social Protest The Literature of the Spanish-American peoples as a reflection of and contribution to the social problems of the area. Reading of major works by genre and by period, following the various directions of social protests against: a) the Spanish political system, b) local governments, c) imperialism. The second half of the course will stress the contemporary scene. Three hours each course. Murad, Zárate. Alternate years, 1976-77.

293 Latin American Civilization A study of history and culture of Latin American people from the formation of the Indian civilization to the present ideals and problems. The periods studied will be the following, Pre-Hispanic civilization, colonization and modern states. Artistic, literary and musical manifestations of these periods will be covered. Three hours. Zárate. Alternate years, 1977-78.

295, 296 Advanced Special Topics
297, 298 Advanced Readings and Research

The following extra-departmental course may be taken for credit toward a major in the Department of Romance Languages:

General Literature 72 Romance Literature in Translation (see page 212).
Linguistics 101, 102 (see page 212).

For Graduate Courses (300 level), Please See Graduate College Bulletin.
Russian and Serbo-Croatian

COLLEGE OF ARTS AND SCIENCES

Professor Paganuzzi; Associate Professor Nalibow; Lecturer Pomar.

1-2 Elementary Russian Four hours each course. Staff.

11, 12 Intermediate Russian Prerequisite: 1-2. Four hours each course. Staff.

101, 102 Introduction to Russian Literature Outstanding authors of the 19th and 20th centuries from Pushkin to Pasternak and Solzhenitsyn. Oral discussion of readings, written practice. Prerequisites: 11, 12. Three hours each course. Paganuzzi.

103, 104 Russian Civilization Introduction to the history of Russian culture including Russian secular and ecclesiastical painting, architecture and music from the earliest periods to the present. Prerequisites: 101, 102. Three hours each course. Paganuzzi.

* 193, 194 College Honors
* 195, 196 Special Topics
* 197, 198 Readings and Research

203, 204 Advanced Russian Advanced oral and written drill, grammar review, lexical problems, roots of the Russian language. Lectures and discussions on the Russian language. Three hours each course. Paganuzzi.

281, 282 Senior Seminar Required of all senior concentrators. Three hours each course. Paganuzzi.

Serbo-Croatian

1-2 Elementary Serbo-Croatian Three hours each course. Staff.

11, 12 Intermediate Serbo-Croatian Prerequisite: 1-2. Three hours each course. Staff.

General Literature

181 Russian Literature in Translation Nalibow. (See Extradepartmental Courses).

182 Soviet Literature in Translation Nalibow. (See Extradepartmental Courses).

* N.B. The series 193-198 is taught in Russian.
Sociology

COLLEGE OF ARTS AND SCIENCES

Professors Folta, Lewis, Mabry, Sampson (Chairman), Stanfield; Associate Professors Finney, Loewen, Nixon, Steffenhagan, Waitzkin, Underhill; Assistant Professors Danigelis, Deming, McCann, Payne, Schmidt, Waterman.

10 Introduction to Sociology Fundamental principles and problems in the sociological analysis of the structure and dynamics of modern society. Three hours. Finney, Loewen, Nixon.

100 Fundamentals of Social Research Introduction to theory and research methods in sociology. Includes examination of basic problems in research design, measurement, data collection, data analysis and the presentation and interpretation of research findings. Prerequisite: Three hours of sociology. Three hours. Danigelis, Deming, Loewen, McCann, Payne, Underhill.

101 Social Problems Analysis of a selected number of major social problems in contemporary society. Three hours. Lewis, Payne, Schmidt.

102 Population, Environment and Society Analysis of the consequences of the varying relationships among population size, social organization, technology and resource base. Prerequisite: Three hours of sociology. Three hours. Deming, McCann, Payne.

109 The Self and Social Interaction Analysis of the social nature of human personality. Special emphasis will be given to the roles of social interaction and language in the formation and structure of the self, socialization as a continuous process throughout the life-cycle, and the impact on individual attitudes and behavior of social stimulus situations. Three hours. Folta, Sampson, Waterman.

114 Deviance and Social Control Analysis of social behavior that violates norms and the range of reactions to such behavior. Special attention will be given to the examination of the causes and consequences of deviance in social organization, the process of becoming a deviant, the structure of the deviant’s world, and the forms of deviance control. Three hours. Folta, McCann, Payne, Stanfield, Waitzkin, Waterman.

119 Minority Groups Analysis of the causes and consequences of the subordination of ethnic, racial, and religious groups in society. Special attention will be given to an examination of group prejudice and discrimination, minority group member’s worlds and their relationships with dominant groups and the institutions of society. Three hours. Danigelis, Loewen, Payne.

122 Women and Society Analysis of the changing roles of women in modern society. Special attention will be given to changes in sex role differentiation and dedifferentiation, female socialization and opportunity and their consequences for major institutions in modern society. Three hours. Deming, Folta, Lewis, Waterman.

125 Alienation in Modern Society An examination of the nature
and sources of social alienation in modern industrial society. Special attention will be given to the effects of the social organization of work, bureaucracy, urbanization and mass culture in the United States. Three hours. Sampson, Steffenhagen, Waterman.

126 Social Problems in Organizations A selective review of problems of individuals working in organizations, of common problems of organizations as social systems, and of problems caused by bureaucracy in modern society. Possible problems to be covered include worker dissatisfaction and alienation, democratic participation and control, problems of voluntary self-help organizations, organizational effectiveness, public accountability, corporate crime, corruption, corporate and multi-national concentration, and "alternatives" to bureaucracy. Prerequisites: Sociology 10 or three hours of sociology, or permission of instructor. Three hours. Finney, McCann, Nixon, Sampson.

129 Sex, Marriage and the Family A description and analysis of contemporary patterns in American sexual, marital and familial behavior, including their historical development, variant patterns and the evolving alternatives to traditional patterns. Three hours. Lewis, Mabry.

132 Affluence and Poverty in Modern Society An examination of the structure of social inequality in contemporary America. Special attention will be given to the distribution of wealth in the United States and its association with power, prestige and opportunity. Three hours. Danigelis, Finney, Mabry, McCann, Nixon, Schmidt.

136 Technology and Social Change Comparative analysis of the way in which technology interacts with human culture and social institutions. Current theories of social evolution and change are evaluated in the light of historical, cross-cultural, and cross national data. Special attention will be given to the development and change of industrial technologies. Three hours. McCann, Underhill.

144 Sociology of Education Analysis of the social organization of educational roles and associations in modern society. Special attention will be given to an examination of the changing structure of the educational institution and its relationship to other institutions in society. Three hours. Lewis, Loewen, Nixon.

151 Religious Deviance, Magic and the Occult Analysis of the social and cultural organization of groups professing spiritual, occult, mystical and/or magical beliefs and their relationship to the major social institutions of society. Three hours. Steffenhagen.

154 Social Organization of Death and Dying. Comparative examination of the nature of cultural and social adaptations to mortality in society. Special attention will be given to the ways in which family, medical, legal, religious and economic institutions respond to the fatally ill and dead in contemporary society. Three hours. Folta.

157 Drugs and Society Analysis of the nature of drug use and abuse in society. Special attention will be given to an examination of the social, cultural, psychological, legal and medical aspects of drug taking and its causes and consequences in contemporary society. Three hours. Steffenhagen, Waitzkin.

161 Sociology of Leisure Analysis of the types and social organiza-
tation of non-work activity in society. Special attention will be given to the exami-
nation of the relationships of life style, social class factors, education and work
to recreation and leisure use patterns in modern society. Three hours. Danigelis.

163 Sociology of Sport Analysis of the types and social organization
of amateur and professional athletics in society. Special attention will be given
to the social origins of athletes, the structure and dynamics of athletic groups
and their fans, and the relationship of sports to the major institutions of modern
society. Three hours. Nixon.

165 The Social Structure of the United States I Examination of
the major institutional structures and processes of contemporary American
society. Special attention will be given to the analysis of the changing ecological
and demographic bases, age and sex roles, and the kinship, stratification and
economic institutions in the United States. May be taken independently of 166.
Three hours. Sampson, Schmidt. Alternate years, 1977-78.

166 The Social Structure of the United States II Examination
of the major institutional structures and processes of contemporary American
society. Special attention will be given to the changing role of bureaucracy; the
political, educational, scientific, religious and medical institutions; ethnic and
race relations; and socio-cultural modes of integration, conflict and deviation
and change in the United States. May be taken independently of 165. Three
hours. Sampson, Schmidt. Alternate years, 1977-78.

167 Social Structure of Canada An analysis of Canada as a social
system. The course uses the theory and methodology of sociology for the study
of such topics as the Canadian identity, the unity or integration of an ethnically
plural society, the resolution of national and regional interests, and the distribu-
tion of persons within the social structure. Prerequisite: Three hours in
sociology or three hours in Canadian studies. Three hours. Stanfield.

193, 194 College Honors
195, 196 Special Topics
197, 198 Readings and Research

202 Population Dynamics Analysis of the factors affecting human
population growth and distribution, migration patterns, and the relationship
between economic activity and population trends. Prerequisite: Six hours of
sociology or 10 and an introductory in biology, economics, geography or
zoology. Three hours. Deming, McCann, Payne.

204 Ecological Perspective on Human Communities Analysis
of the relationships between forms of social organization and their environments
with special emphasis upon community contexts. Attention given to the impact
on various kinds of communities of the differential location of socio-economic,
racial and cultural groups. Three hours. Deming, Mabry, Schmidt.

205 Rural Communities in Modern Society The changing structure
and dynamics of rural social organization in the context of modernization, and
urbanization. Emphasis on rural communities in America. Three hours. Finney,
Schmidt.

206 Urban Communities in Modern Society The changing structure
and dynamics of urban social organization in the context of modernization and

207 Community Organization and Development Community as a changing complex of organization within modern society. Special attention will be given to problems of the formulation and implementation of alternative change strategies. Three hours. Schmidt.

209 Small Groups An examination of the structure and dynamics of interpersonal relations and informal interactions in small groups. Three hours. Nixon, Steffenhagen.

210 Collective Behavior Analysis of the nature and types of emergent, non-institutional behavior, especially responses to shared stressful or crisis situations. Includes the examination, social origins, development and consequences of crowd, riot, disaster and craze behavior. Three hours. Finney, Stanfield, Waterman.

211 Social Movements Analysis of the nature and types of relatively organized collective action to promote social or cultural change. Special attention will be given to the genesis, structure and social consequences of political and religious movements. Three hours. Finney, Folta, Stanfield, Waterman.

212 Culture and Personality The cross-cultural comparison of personality development; the problem of delineating modal personality types. Prerequisites: 10, Anthropology 21 and one 100 level course in sociology or anthropology. Three hours. Mabry, Magnarella (Anthropology), Steffenhagen. (Cross-listed in anthropology.)

214 Delinquency Analysis of the nature and types of juvenile behavior that violates law, the mechanisms for defining such behavior as delinquent, and the relationships between delinquency and the social situations of juvenile offenders. Three hours. Folta, McCann, Payne.

215 Crime Analysis of the nature and types of adult behavior that violates law, the mechanism for defining such behavior as criminal, and the relationships between crime and the social situation of adult offenders. Three hours. Folta, McCann, Payne, Stanfield.

216 Criminal Justice Analysis of the social structures and processes involved in the specification of behavior as being legally deviant and the labeling of individuals as delinquent or criminal offenders. Criminal law, its enforcement and the courts. Three hours. Folta, Payne, Stanfield.

217 Corrections Analysis of the social structures and processes involved in dealing with individuals who have been designated as offenders of criminal law. Probation, prison, parole, programs of prevention and rehabilitation. Three hours. Stanfield.

219 Race Relations Examination of racial subordination in social and historical context. Special attention will be given to the analysis of the forms of interracial contact, racial subcultures and social structures, social psychological and protest responses to racial prejudice and discrimination. Emphasis on American experience. Three hours. Danigelis, Loewen, Payne.

225 Organizations in Modern Society Analysis of the structure and dynamics of organizations. Special attention given to theory and research on both the internal structure and the environmental relations of organizations, including their role in modern society. Although various forms and types of
organizations, such as "total institutions," corporations, schools, and voluntary associations, will be treated, primary emphasis will be given to relationships that are applicable to organizations in general. Three hours. Finney, Nixon, Sampson.

226 Small Groups in Complex Organization Analysis of the emergence, structure and consequences of informal interaction in large, formal organizations. Special attention will be given to the reciprocal effects of small groups and their complex organizational environments. Three hours. Nixon, Steffenhagen.

228 Organizational Development and Change An introduction from an applied sociological perspective to the field of organization development and to related issues of organizational innovation and change. Substantial attention is given to the relevance of sociological theory and research on organizations to the theory of organizational development, including a review of the research evidence regarding its effectiveness. The course will also deal with the relevance of basic research on organizational innovation to organization development. Occasional class exercises will illustrate the nature of various organizational development techniques. Prerequisite: One course on organizations, or equivalent, or permission of instructor. Three hours. Finney, Sampson, Steffenhagen.

229 The Family as a Social Institution Description and analysis of the family as one of society’s major social institutions; the varying theoretical perspectives used in studying the family; the family in cross-cultural perspective; the role of social values in understanding continuity and change in the American family institution. Prerequisite: Sociology 129 or six hours in sociology. Three hours. Lewis, Mabry.

230 Social Value Patterns in American Family Life A detailed examination of both the similarities and differences in social value patterns characteristic of the different segments of American family life and the relation of each to the larger American society. Attention will be given to both continuity and change in value patterns, including radical alternatives, and their significance for future developments in the family and society. Three hours. Lewis

232 Social Class and Mobility Comparative analysis of the social causes, structures and consequences of the differential ranking of individuals and groups in society. Special attention will be given to the criteria for social ranking, their measurement and association and intergenerational social mobility. Three hours. Danigelis, Finney, Lewis, Nixon, Schmidt, Underhill.

237 Occupations and Professions Analysis of the social organization of economic roles and associations in industrial society. Special attention will be given to an examination of the impact of the structure of work on the individual and the relationship of occupations and professions to other institutions in society. Three hours. Mabry, Underhill, Waterman.

240 Political Sociology Analysis of the social organization of political roles and associations in modern society. Special attention will be given to an examination of the changing structure of the political institution and its relationship to other institutions in society. Three hours. Danigelis, Loewen, Nixon, Waitzkin.

241 Public Opinion Analysis of the factors affecting social attitude formation and change. Special attention will be given to political and social ideology. Three hours. Underhill.
248 Social Organization of Science  Examination of science as a social institution, its social structure and its relationship with other institutions in society. Topics will include organization of research, stratification, social control, communication, and the relationship to such other institutions as educational, economic and political structures. Prerequisites: (1) Six hours of social science or (2) three hours of social science and six hours of natural science. Three hours. McCann.

249 Sociology of Knowledge  Reviews the development and present state of sociological theory and research on the emergence and role of belief and normative systems in society. Special attention will be given to systematic attempts to understand the causes and consequences of shared constructions of social reality. Three hours. Loewen, McCann, Sampson.

251 Sociology of Religion  Analysis of the social organization of religious roles and associations in modern society. Special attention will be given to the changing structure of the religious institution and its relationship to other institutions in society. Three hours. Sampson.

254 Sociology of Health and Medicine  The socio-cultural environment of physical well-being and illness. Special attention will be given to the role of socio-cultural factors in the etiology, identification, definition and treatment of illness in society. Three hours. Folta, Mabry, Steffenhagen. Waitzkin, Waterman.

255 Sociology of Mental Health  The socio-cultural environment of mental well-being and illness. Special attention will be given to the role of socio-cultural factors in the etiology, identification, definition and treatment of mental illness in society. Three hours. Folta, Mabry, Steffenhagen, Waitzkin, Waterman.

258 Sociology of Law  Analysis of the social organization of legal roles and associations in modern society. Special attention will be given to the changing structure of the legal institution and its relationship to other institutions in society. Three hours. Folta, Stanfield

273 Methodology of Social Research  Basic issues in the construction and empirical testing of sociological descriptions, predictions and explanations. Consideration will be given to the philosophy and logic of social research and the socio-cultural nature of scientific inquiry; theoretical frames of reference; concept formation, measurement and validation; socio-cultural causation and measures of association; models, theories and verification; and the formalization of theories. Three hours. Danigelis, McCann, Sampson

274 Methods of Data Gathering in Social Research  An examination of the methods available for studying social phenomena including laboratory and field experiments, observational techniques, social surveys, content analysis, cross-cultural comparisons and others. Basic problems in research design, sampling methods, and measurement and scaling will be investigated. Three hours. Danigelis, Deming, Loewen, Mabry, McCann, Schmidt, Waterman, Underhill.

275 Methods of Data Analysis in Social Research  An examination of approaches to the quantitative analysis of sociological data, including table analysis, regression and path analysis, scaling and factor analysis, and the analysis of variance with emphasis on the multivariate techniques. Three hours. Danigelis, McCann, Payne, Underhill.
The Development of Sociological Theory  An examination of the major classical traditions in social theory and their contemporary research relevance. Detailed critical attention will be given, but not necessarily confined to, the theoretical and methodological contributions of Marx, Durkheim and Weber. Three hours. Danigelis, Loewen, McCann, Payne, Sampson, Schmidt.

Contemporary Sociological Theory  A detailed examination of selected major theoretical approaches and issues in modern sociology. Three hours. Prerequisite: Sociology 278. Loewen, McCann, Sampson, Schmidt, Stanfield.

Seminar  Presentation and discussion of advanced problems in contemporary sociological analysis. Prerequisites: Twelve hours in sociology and permission of the department. Three hours. Staff.

Seminar: Research and Methods of Teaching Sociology  The development and evaluation of teaching strategies in sociology. Open only to graduate students and advanced undergraduate sociology majors who are serving concurrently as teaching assistants in the Department. Prerequisites: Twelve hours in sociology and permission of the department. Three hours. Danigelis, Finney, Loewen, McCann, Nixon, Underhill.

Seminar: Research and Methods of Teaching Sociology  Prerequisites: Twelve hours in sociology and permission of the department.

Special Topics

Readings and Research

Statistics

COLLEGE OF ENGINEERING, MATHEMATICS AND BUSINESS ADMINISTRATION
Statistics Program Steering Committee: Professors McCrorey, Sylwester (Director); Associate Professors Howell, Newton; Assistant Professors Ashikaga, Fritz, Gordon, Haugh, Tashman; Adjunct Assistant Professor Dorsey; Lecturer Aleong.

Discrete Probability Models  Non-calculus introduction to probability concentrating on developing and analyzing discrete stochastic models of real world phenomena (e.g., genetics, learning theory, screening for diseases, discrete birth and death processes). Prerequisite: Two years of secondary school algebra. Three hours. No credit for juniors or seniors in the mathematical sciences. Staff.

Elements of Statistics (3-1)  Basic statistical concepts and methods: averages, correlation, regression, sampling theory, confidence intervals, and hypothesis tests. Realistic problems as laboratory projects with instruction in use of the computer for computations. Prerequisite: Two years of high school algebra. Three hours. Staff.

Basic Statistical Methods  A traditional introductory methods course for students planning to take additional statistics courses or quantitative methods courses in their respective fields. Emphasis is on developing a fundamental working knowledge, including necessary calculational skills, in statistical description, estimation, and hypothesis testing. Prerequisite: College algebra or one semester of calculus, sophomore standing. Three hours. A student may receive credit for only one of 111, 141 and 211, unless special permission has been given by the Statistics Program. Staff.
151 **Applied Probability** Development and application of discrete and continuous probability models to real world phenomena in which outcomes are subject to random variation. Emphasis is on the classical distributions: hypergeometric, binomial, geometric, uniform, normal, exponential, gamma, and beta; random walks and poisson processes. Undergraduate credit not recommended for both 151 and 251. *Corequisite:* Mathematics 121. Three hours. Sylwester.

211 **Statistical Methods I** Fundamental ideas and techniques of statistics, with applications, used in experimental design and data analysis; descriptive and inferential statistics, especially, parameter estimation and hypothesis testing. Introduction to correlation, regression, and analysis of variance. One section of 211 is cross-listed as Psych 340. *Prerequisite:* College Algebra. Three hours. Staff.

221 **Statistical Methods II** Continuation of 211 concentrating on linear and multiple regression, analysis of variance, chi-square tests, and non-parametric methods. *Prerequisite:* Any one of 141, 211, or 241. Three hours. Staff.

225 **Applied Regression Analysis** The nature and applications of basic regression-correlation models in investigating relationships, testing hypotheses and making predictions. Emphasis on the art of developing appropriate models and evaluating existing research. *Prerequisite:* Any one of 111, 141 or 211. Three hours. Tashman.

227 **Statistical Methods for the Behavioral Sciences** (3-1) See Psychology 341.

229 **Statistical Methods for the Engineering Sciences** Multiple regression modelling, factorial design of experiments with analysis of variance. Statistical quality control, attribute and variable inspection schemes, control charts. Probability distributions used in queuing, reliability, life testing. *Prerequisites:* Any one of 141, 211 or 241; 111 with instructor permission. Three hours. Haugh.

231 **Experimental Design** Experimental design techniques, survey of basic experimental designs, factorial designs; fixed and random effects models; multiple comparisons. *Prerequisites:* Any one of 221, 227, 229, 242 or 313; 225 with instructor permission. Three hours. Haugh.

233 **Sample Survey Methods** Presentation of implementing and estimating parameters for various sampling schemes including simple random, stratified random, systematic, and cluster sampling. Relative efficiencies of designs. *Prerequisite:* Any one of 141, 211, 241, or 313. *Corequisite:* 151 or 251. Three hours. Ashikaga. Alternate years, 1977-78.

235 **Multivariate Methods** Properties and statistical methods, with applications, for the multivariate normal distribution; multiple regression; non-linear regression, discriminant functions, principal components and factor analysis. Experience in data analysis using computer programs. *Prerequisites:* 241 and any one of 221, 225, 227, 229, and 313. Three hours. Ashikaga. Alternate years, 1977-78.

237 **Nonparametric Methods** Nonparametric procedures for hypothesis tests and confidence intervals, including rank procedures and those based on the binomial distribution. Selecting the optimum procedure for a particular
problem. **Prerequisite:** Any one of 141, 211, or 241. Three hours. Staff. Alternate years, 1976-77.

**241, 242 Statistical Theory I, II** Introduction to the fundamental concepts, principles and procedures of modern statistics: sampling distributions, decision theory, point and interval estimation, hypothesis testing, nonparametric procedures, sequential procedures. Selected applications to illustrate the theory. **Prerequisites:** 141 or 211 recommended but not required; 151 or 251 for 241; 241 for 242. Three hours. Offered in spring (241) and fall (242). Staff.

**251 Probability Theory** Non-measure-theoretic course in probability with some applications. Axioms of probability, random variables, generating functions, laws of large numbers and central limit theorems, introduction to stochastic processes. A strong working knowledge of calculus including infinite series and multiple integration is needed. **Prerequisites:** 141 or 211 recommended but not required; 151 or 251 for 241; 241 for 242. Three hours. Staff.

**252 Stochastic Processes** Discrete and continuous stochastic processes: the random walk, branching, Poisson, birth and death, Brownian and diffusion processes. Analysis of times series in both the time and frequency domain. **Prerequisite:** 151 with permission of instructor or 251. Three hours. Sylwester. Alternate years, 1976-77.

**281 Statistics Practicum** Intensive experience in carrying out a complete statistical analysis for a specific research project in a substantive area with close consultation with the project investigator. 1-4 credit hours. **Prerequisites:** One year of statistics and elementary computer programming ability. Staff.

**285 Special Topics** For advanced students. Lectures, reports and directed readings on advanced topics. **Prerequisite:** Consent of instructor. Credit as arranged. Offered as occasion warrants. Staff.

**291, 292 Senior Problem** Investigation of some area or problem, under the direction of an assigned staff member, culminating in a report. Available only to undergraduate candidates specializing in statistics. **Prerequisite:** Permission of the Program Director. Three hours. Staff.

## Technology

**COLLEGE OF ENGINEERING, MATHEMATICS AND BUSINESS ADMINISTRATION**

The College of Engineering, Mathematics and Business Administration offers the following courses on a non-departmental basis.

1 **Engineering Design Concepts I (1-3)** See course description on page 190.

2 **Engineering Design Concepts II (1-3)** See course description on page 190.

7 **Man's Place in the Universe (1-0)** Philosophy has been, over the years, mainly concerned with the problems of understanding man; his activities, his beliefs, his relationship to his fellows and his significance in the larger universe. This course endeavors to integrate and interpret existing scientific data to make comprehensible these areas of human concern. The guiding
principle is that all life must conform to the requirements of Darwin's Theory of Natural Selection and be consistent with the world's known evolutionary history. Topics include: theories of the development of the universe, nature's technique of design-by-chance, a scientific critique of religion and philosophy, the evolutionary basis of human and animal psychology and behavior, the genetic code and double-helix, the survival benefits of the religious impulse. The course will be presented in non-technical language for persons interested in practical philosophy. One hour. Rush.

51 Technology and Society (3-0) An examination of the effects of modern technology on society. Non-technical views as well as those of engineers and scientists are presented. Readings from the current literature. Group study projects. Prerequisite: Sophomore standing. Three hours.

52 Technology and the Environment (3-0) Practical information on solving environmental problems with emphasis on pollution. Inter-relationships and control of land, air, and water environments. Lectures supplemented by discussion and field trips. Prerequisite: One semester of college chemistry or permission of the instructor. Three hours.

53 Energy and the Environment (3-0) Physical principles underlying various energy conversion devices for the generation of electricity. Hydroelectric, fossil fuel and atomic power plants. Direct energy conversion: photovoltaic, fuel cell, and magnetohydrodynamic devices. Present and future availability of fuels, their costs, and the environmental impact of various sources of power. Three hours.

54 Our Electronic World (3-0) Fundamentals of common electronic systems including telephone, radio, television, phonograph, magnetic tape recorder, and controls. Qualitative discussion of theory and practice and live demonstrations of basic principles. Prerequisite: High School algebra. Three hours.

64 Concepts and Design for Thermal Comfort (3-0) A study of the factors and their control, that affect the thermal comfort of humans, including climate and shelter, building materials, heat loss and gain, and mechanical systems for thermal environment modification. Prerequisite: High School algebra. Three hours. Tuthill.

251 Technology and Society Seminar (3-0) Current views on the influence of technology on society through extensive study of contemporary writings and involvement in seminars, discussion and project assignments. Prerequisites: Either Tech 51 or permission of the instructor and Senior or Graduate standing. Three hours.

Vocational Education and Technology

COLLEGE OF AGRICULTURE

Professors Fuller (Chairman), Schneider; Assistant Professors Bloom, Ferreira, Jensen, Lampe, Wells; Adjunct Faculty: Assistant Professors Kisko, Moore, Wells.
General

5 Introductory Agricultural Engineering (2-2) Introduction to building, wiring, water supply, sewage disposal, soil and water engineering, mechanical principles, and engines, for residential, recreational and farm use with environmental considerations. Three hours. Schneider.

100 Laboratory Processes in Industrial Arts Education A study of the major industrial arts technical areas currently taught in the public schools of Vermont; emphasizing specific competencies in the technologies of wood, metal and power. The course will be divided into twelve content modules of instruction of which the student will select two modules per semester. Each student will spend four clock hours per week in the lecture and laboratory setting, per module. Prerequisite: A drafting course or exhibited competency or permission of instructor. Two hours per module. Bloom, Ferreira.

102 General Shop (0-6) Wood and metal working by hand and machine, sheet metal, welding, rope, and tool fitting. Shop layout, selection of equipment. Prerequisite: Sophomore standing. Three hours. Schneider.

104 Leadership Preparation Group and independent study and practice of methods for teachers, officers, administrators and group members to increase their leadership ability. Prerequisite: Junior standing or departmental permission. Three hours. Alternate years, 1976-77. Jensen.

106 Understanding the Mentally Retarded Survey of nature and needs of the mentally retarded. Field trips to, and discussions with, personnel from agencies and institutions serving the handicapped. Variable credit: One hour for field trips, two hours for lectures and discussions, three hours for combination. Lampe.

112 Extension and Community Education Introduction to community education programs and techniques. Includes field trips, group activities, and independent study. Prerequisite: Sophomore standing. Three hours. Jensen, Kelly.

152 Introduction to Career Oriented Education Orientation to career education, and principles and philosophy of occupational and practical arts education. Includes field trips and independent study. Prerequisite: Sophomore standing. Three hours. Jensen.

156 Developing Instructional Materials for Teaching For students who will have educational program responsibilities in business, government, or schools. Materials will be prepared for auto-tutorial devices, audio-visual presentations, and other teaching techniques. Prerequisite: Sophomore standing. Three hours. Fuller.

170 Nature and Needs of the Handicapped Adolescent (2-3) Examines the characteristics and needs of the handicapped adolescent and young adult from the standpoint of biological, psychological and social development. Emphasis is on the transition from childhood dependence to independent adult roles. Prerequisite: Sophomore standing. Variable credit: 2 for lecture and discussion, 1 for field experience, 3 for combination. Lampe.

253 Teaching Adults Problems related to organizing and planning adult education programs for schools, community organizations, government agencies or business. Techniques for teaching adults will be analyzed. Prerequisite: Senior standing. Three hours. Jensen.
275 Developing Vocational Instruction for Students with Special Needs (2-3) Planning, development and implementation of life-relevant academic curricula and learning experiences appropriate for students with special needs at the secondary school level. Implementation of career education concept with handicapped students. Prerequisite: 106 or 170 or permission of instructor. Variable credit: 2 for lecture and discussion, 1 for field experience, 3 for combination. Lampe.

276 Resources and Procedures for Instructing Students with Special Needs (2-3) Considers materials, media, and instructional approaches appropriate for educating students with special needs in the secondary and vocational schools. Prerequisite: 275 or permission of instructor. Variable credit: 2 for lecture and discussion, 1 for field experience, 3 for combination. Lampe.

Agricultural Engineering and Technology

121 Soil and Water Management (2-3) Analysis of agricultural, recreational, and other rural soil and water problems; surveying fundamentals related to design and application of conservation practices for environmental protection. Prerequisites: Math 2 or knowledge of plane trigonometry; Plant and Soil Science 109 desirable. Three hours. Alternate years, 1977-78. Wells.

140 Power and Machinery for Agriculture, Recreation and Forestry (2-3) The principles of operations and maintenance of engines, tractors, and machinery used in agriculture, recreation and forest management. Power and machinery selection and management. Prerequisite: Physics 3, Math 9, or approval by instructor. Three hours. Alternate years, 1976-77. Wells.

162 Electricity, Water Systems, and Sewage Disposal in Residential, Recreational and Agricultural Use Wiring systems and applications of electricity, water sources and systems, sewage disposal for agriculture, residences, recreation, and rural development with environmental considerations. Prerequisite: Sophomore standing. Three hours. Alternate years, 1976-77. Moore.

Occupational and Extension Education

20 Introduction to Manufacturing An introduction to the basic principles, organization, processing equipment, methods, operations, procedures, and design utilized by contemporary industries. Special emphasis will be given to laboratory experiences reflective of competencies needed by public school teachers in the areas of wood, metal, and plastic. Three hours. Alternate years, 1976-77. Ferreira.

30 Introduction to Construction An introduction to the construction industry encompassing residential, commercial, industrial, agricultural, and civil areas, emphasis on codes, plans, specifications, construction methods, materials, and equipment used and elements of project control. Three hours. Alternate years, 1976-77. Ferreira.

150 Technical Internship Planned, supervised, off-campus educa-
tional internship during summers and/or junior year. Technical theory plus practical application in field experiences. A student may enroll more than one time and accumulate up to 30 hours credit. Prerequisite: Departmental permission. Credit as arranged. Offered by request. Staff. I, II.

153-154 Teaching Internship in Occupational Education Seminars for newly employed teachers of occupationally oriented subjects plus two consecutive semesters of supervised teaching. Prerequisites: Employment as a teacher, a teaching methods course or concurrent enrollment, and departmental permission. Four hours each. Bloom, Ferreira, Fuller, Jensen.

155 Teaching Practicum in Occupational Education Ten full weeks of supervised teaching in a high school or junior college; including two weeks during opening of school year. Prerequisites: 152, concurrent enrollment in 251; acceptance into teacher education program. Eight hours. Bloom, Fuller, Jensen, Lampe.

158 Evaluating Achievement in Occupationally Oriented Education Introduction to evaluation techniques for occupational and technical subjects. Includes: test construction, teacher-made tests, and statistical analysis of scores. Prerequisite: A teaching methods course or concurrent enrollment, or departmental permission. Three hours. Alternate years, 1977-78. Bloom.

159 Developing Courses for Occupational Education Systematic development of course materials used in teaching occupationally oriented subjects. Includes: occupational analysis, performance objectives, course content, and supplementary instructional materials. Prerequisite: A teaching methods course or concurrent enrollment, or departmental permission. Three hours. Alternate years, 1976-77. Bloom.

251 Methods for Teaching Occupationally Oriented Subjects Advanced teaching techniques combined with micro-teaching. Emphasis placed upon teaching and program management at high school or junior college level. Prerequisite: Concurrent enrollment in 153 or 155 or departmental permission. Three hours. Fuller.

282 Seminar Follow-up of teaching practicum. Required for all students completing 155. Prerequisite: 155. One hour. Staff.

Independent Study and Research

197 Special Problems Individual investigation of a problem selected to meet special needs of students. Students may enroll more than one time and accumulate up to six hours. Prerequisite: Departmental permission. Credit as arranged. Offered by request. Staff. I, II.

295 Special Topics Lectures, laboratories and/or readings and reports to provide background and specialized knowledge relating to contemporary areas of study. Students may enroll more than one time and accumulate up to nine hours. Prerequisites: Senior standing, departmental permission. Credit as arranged. Offered by request. Staff. I, II.
Wildlife Biology

SCHOOL OF NATURAL RESOURCES
Assistant Professors Capen and Hoekstra; Lecturer Fuller (Program Leader).

100 Wildlife Field Biology and Ecology Ecological methods and their application in examination of selected wildlife problems and biotic communities; emphasis on wildlife components, dependencies, and interactions. Prerequisites: Biology 1, 2 or Botany 4 and Zoology 9; Botany 160 or Forestry 122 recommended; Sophomore standing. Three weeks in summer camp. Three hours. Fuller.

170 Wildlife Biometrics Wildlife habitat measurement, analysis, description and mapping; capturing and marking wildlife; wildlife census. Prerequisites: Forestry 122, 144. Four hours. Hoekstra.

174 Principles of Wildlife Management Plant and animal ecology applied to control of wildlife populations; properties of species and populations and habitats; consideration of game, non-game and endangered species. Prerequisites: Biology 1, 2 or Botany 4 and Zoology 9; a course in plant, animal, or general ecology. Three hours. Fuller.

175 Game Mammals Behavior, ecology, metabolism, reproduction, taxonomy and zoogeography of the Class Mammalia emphasizing game species of North America. Introduction to specimen collection and preservation, sex and age determination. Prerequisites: Biology 1, 2 or Botany 4 and Zoology 9. Four hours. Hoekstra.

185, 186 Special Topics 187, 188 Undergraduate Special Topics Individual projects supervised by a faculty member or other professional person. Projects may involve independent field or laboratory or library investigations, and work-study or internship arrangements with a cooperating private or public resource organization. Formal report required. Prerequisites: Junior standing and submission of a project prospectus for permission. A maximum of five hours in the program. Staff.

271 Wetlands Wildlife Ecology Life histories and management emphasizing N.A. waterfowl and furbearer resources; integration of aesthetic, ecological, recreational, and socio-economic values with contemporary uses of land and water. Field studies and one weekend trip. Prerequisites: Animal Science 158, Wildlife Biology 174, 175. Four hours. Fuller.

276 Dynamics of Exploited Wildlife Populations Analysis of natural and manipulated wildlife population parameters through simulation techniques. Emphasis on population management for commensurate benefit to wildlife and humans. Prerequisites: 271 or 272. Three hours. Hoekstra.

281, 282 Wildlife Seminar A topical seminar in contemporary issues of fish and wildlife conservation presented by students, faculty, and non-
academic resource personnel. Required of wildlife seniors and graduate students. Others by permission. One hour. Staff

287, 288 Graduate Special Projects Advanced readings and discussions or special field and/or laboratory investigations dealing with a topic beyond the scope of existing formal courses. Prerequisite: Undergraduate major in wildlife biology or ecology. Others by permission only. Credit arranged. Staff.

Zoology

COLLEGE OF ARTS AND SCIENCES

Professors Bell, Glade, Henson, Potash (Acting Chairman), Rothstein; Associate Professors Brammer, Davison, Landesman, Stevens, and Woods; Assistant Professor Kilpatrick; Visiting Assistant Professors Elvin, Oswood, and O’Mahoney.

Biology

1, 2 Principles of Biology (3-3) Introduction to the structure, functions, and evolution of animals and plants. Emphasis on concepts important for advanced study in a Life Science and for understanding the biological world of which man is a part. Prerequisite: 1 for 2. Four hours. Botany and Zoology staffs.

3 Biology and Man An introduction for nonscience majors. Selected biological topics relevant to man such as cancer, human genetics, environmental toxicants; and biological principles and concepts necessary for an understanding of these problems. No prerequisite. Three hours. Potash

7 Biological Aspects of Environmental Problems (II) The biological effects of environmental problems. The harmful biological impact of air and water pollutants, with major emphasis on their physiological, genetic and ecological action on plants and animals, particularly man. Prerequisite: Environmental Studies 1. Three hours. Potash.

101 Genetics Structural basis of inheritance; gene mutations; chromosomal aberrations; genes and enzymes; gene action in differentiation; genetics of populations; nonchromosomal inheritance. Prerequisites: 1, 2. Three hours. Kilpatrick.

102 Environmental Biology (3-3) An ecological introduction to adaptation of organisms and populations, and to the structure and dynamics of biological populations, natural communities and the biosphere. Prerequisites: 1, 2. Four hours. Oswood.

103 Cell Structure and Function (3-3) Structure and physiology of cells, with emphasis on basic features common to all forms of life. Prerequisites: 1, 2. Four hours. Landesman.

105 Genetics Laboratory (0-3) Illustration of concepts presented in

Credit will not be given for both Biology 1, 2 and Botany 4. Credit will not be given for both Biology 1, 2 and Biology 3. Botany and Zoology majors will not receive credit for Biology 3.
Biology 101. Prerequisites: 101 or concurrent enrollment and permission of the instructor. One hour. Kilpatrick.

Zoology

5-6 Human Anatomy and Physiology (2-2) Dissection of the cat, plus various vertebrate organs, with direct comparisons to corresponding structure in the human body; physiological experiments; microscopic study of tissues. Three hours. O'Mahoney.

9 Introductory Zoology A survey of principles of Zoology from the cellular to the organismal level, including animal diversity, elementary genetics, evolutionary biology, and emphasizing the relationship between form and function as exemplified by the vertebrate. Four hours. Stevens.

104 Comparative Structure and Function Anatomy and physiology of organs and organ systems in animals with emphasis on basic physiology common to all forms. Prerequisite: Biology 103. Four hours. Elvin.

193, 194 College Honors

195, 196 Special Topics

197, 198 Undergraduate Research Individual laboratory research under the guidance of a faculty member. Prerequisites: Junior or Senior standing and departmental permission. Three hours or six hours.

201 Control of Growth and Differentiation Three hours. Prerequisites: Biology 101 and Chemistry 131, 132. Davison.

202 Quantitative Biology Mathematical concepts applied to biological problems such as growth, metabolism, temperature effects, kinetics, and graphic interpretation of data. Statistics will not be treated. Prerequisite: At least one intermediate level course in biology, Mathematics 9, or permission of the instructor. Three hours. Davison.

204 Biological Aspects of Water Quality Management Designed to meet the needs of students who are developing careers in any of the various aspects of water resources. The biological and limnological viewpoints of the aquatic systems (lakes and streams); practical experience in methodology and interpretation in the field and laboratory. Credit will not be given for both Zoology 236 and this course. Prerequisites: Upper class or graduate standing, a year of chemistry, two advanced courses in related areas, and permission of the instructor. Four hours. Henson.

205 Natural History of Birds and Mammals (2-4) History, identification, evolution, ecology, behavior, zoogeography, conservation and

1 May be taken for credit in the College of Arts and Sciences but does not satisfy the requirements of a course in biology for premedical and predental students. Students will not receive credit for both this course and Zoology 104.

2 This course is not intended for students who plan to become Biology or Zoology majors but may be taken by transfer students who have already taken a semester of botany. Credit will not be allowed for both Zoology 9 and Biology 1, 2 or Zoology 5-6.

3 Students will not receive credit for Zoology 104 and Zoology 5-6, nor for Zoology 104 and Anatomy 9 and/or Physiology 10.
aesthetics. **Prerequisite:** 104 or Biology 102. Four hours. Woods. Alternate years, 1976-77.

207 **Natural History of the Lower Vertebrates** Classification, ecology, behavior, evolution, and distribution of fish, amphibians, and reptiles. **Prerequisite:** 104. Three hours. Bell. Alternate years, 1976-77.

208 **General Entomology (2-4)** Morphology, physiology, and evolution of insects. **Prerequisite:** 104 or Biology 102. Four hours. Bell. Alternate years, 1977-78.

209 **Field Zoology (2-4)** Collection and identification; study of local habitats, their nature, and adaptations to them; factors governing distribution methods of preparing study specimens. **Prerequisite:** 104 or Biology 102. Four hours. Bell.

211 **Embryology (2-4)** Principles exemplified by typical invertebrate and vertebrate embryos. **Prerequisite:** 104. Four hours. Glade.

212 **Comparative Histology (2-4)** Anatomy of tissues, chiefly vertebrate. Tissue similarities and specializations of organs among the various groups of animals in relation to function. **Prerequisite:** 104. Four hours. Glade.

216 **Human Genetics** Inheritance; population genetics; interaction of heredity and environment; application to human problems. **Prerequisite:** Biology 101. Three hours. Kilpatrick.

219 **Comparative and Functional Vertebrate Anatomy (2-4)** Structure, function, and phylogeny; survey of evolutionary and functional trends; investigation of the structure of all chordate groups. **Prerequisite:** 104. Four hours. Woods.

220 **Mechanisms of Cell Division** Fine structure and physiology of normal and abnormal cell division; emphasis on mechanisms. **Prerequisites:** Biology 103, a course in biochemistry, and the consent of the instructor. Three hours. Stevens.

222 **Experimental Embryology (2-6)** Theoretical approach based on research in embryology, genetics, physiology, bacteriology, and related fields. **Prerequisites:** 211 and departmental permission. Four hours. Glade. Alternate years, 1976-77.

223 **Biochemical Embryology** Biochemical and structural differentiation of cells and tissues during oogenesis and embryogenesis. **Prerequisites:** 101, 211. A course in biochemistry is recommended. Three hours. Landesman.

225 **Environmental Physiology (2-4)** Processes by which animals cope with moderate, changing, and extreme environments. **Prerequisites:** Biology 102 and 104. Four hours. Woods. Alternate years, 1977-78.

231 **Cell Physiology (2-4)** Experimental techniques used to elucidate chemical and physical mechanisms within living cells. **Prerequisites:** Biology 103, Chemistry 131, 132, and departmental permission. Four hours. Staff.

236 **Limnology (2-4)** The ecology of standing waters: the biota of lakes as related to the geological, physical, and chemical conditions of lakes. **Prerequisites:** Biology 102, Inorganic Chemistry, and Junior standing. Four hours. Henson.
237 Ecology of Running Waters (2-4) Stream and river environments, adaptations of organisms to varying physical, chemical, and biotic conditions. **Prerequisites:** Biology 102, Inorganic Chemistry, and Junior standing. Four hours. Potash.

240 Invertebrate Ecology of the Mountains An intensive study of the invertebrate fauna of Camel's Hump and vicinity. **Prerequisite:** Biology 102 or a course in invertebrate or insect taxonomy. Four hours. Bell.

242 Vertebrate Evolution Theoretical and paleontological evidence for origin, evolution, and classification of vertebrates. Several optional weekend field trips to see fossil vertebrates in collections and nearby area museums. **Prerequisites:** Biology 1, 2; Zoology 104 or Geology 121, or permission of the Instructor. Geology 1 is strongly recommended, especially for graduate students interested in entering fields of evolution and paleontology. Three hours. Woods. Alternate years, 1976-77.

250 Vertebrate Zoology (2-4) Anatomy, physiology, and life histories of representatives of the more important phyla. **Prerequisite:** 104. Four hours. Elvin.

251 Insect Structure and Function (3-3) Anatomy and physiology with emphasis upon growth, reproduction, and sensory physiology. **Prerequisite:** 104 or consent of instructor. Four hours. Brammer. Alternate years, 1977-78.

255 Comparative Animal Physiology (2-6) General principles of function in invertebrates and vertebrates. **Prerequisites:** 104, departmental permission and Chemistry 131, 132. Four hours. II. Staff.

258 Physiological Integration Principles of integration which apply to the functioning of cells, tissues and organs, chiefly in vertebrate organisms. **Prerequisites:** Physics, Organic Chemistry, Biology 103, 104. Three hours. Staff.

262 Biological Basis of Behavior The structure and function of neural and hormonal mechanisms involved in animal behavior with emphasis on phylogeny. **Prerequisite:** Biology 103 or permission of the instructor. Three hours. Stevens.

270 Modern Evolutionary Theory Contributions of modern research in genetics, systematics, distribution, experimental embryology, serology, and related fields to problems of evolutionary change. **Prerequisite:** Biology 101 (Biology 102 recommended). Three hours. Kilpatrick.

271 Advanced Limnology Analyses of current concepts and problems. **Prerequisite:** 236. Four hours. Henson.

281 through 283 Seminar Review and discussion of current zoological research. Graduate students and seniors in zoological research programs may enroll. Without credit.

Instructor in Military Studies
Clinical Assistant Professor of Obstetrics & Gynecology
Assistant Professor of Wildlife Biology
Professor of Animal Sciences
Professor of Organizational and Human Resource Development
Associate Professor of Mechanical Engineering
Assistant Professor of Romance Languages
Professor of Civil Engineering
Professor of Mathematics
Professor of Physiology & Biophysics
Instructor in Radiology
Professor of Music
Adjunct Professor of Medical Microbiology
Lecturer in Computer Science
Clinical Instructor in Ophthalmology
Assistant Professor of Physical Education
Associate Professor of Economics
Clinical Associate Professor of Medicine
Assistant Professor of Organizational and Human Resource Development
Associate Professor of Physical Education
Professor of Forestry
Lecturer in Special Education
Instructor in Technical Nursing
Assistant Professor of Pathology
Clinical Associate Professor of Pediatrics
Lecturer in Computer Science
Clinical Instructor in Medical Technology
Clinical Assistant Professor of Neurology
Professor of English
Adjunct Assistant Professor of Extension
Professor of Thoracic and Cardiac Surgery
Associate Professor of Pediatrics
Professor of Psychiatry
Clinical Assistant Professor of Psychiatry
Assistant Professor of Surgery
Visiting Instructor of Communication and Theatre
Assistant Professor of Pediatrics
Clinical Assistant Professor of Medicine
Lecturer in Physical Education
Clinical Instructor in Medicine
Associate Professor of Teaching and Learning Specialties
Associate Professor of Botany
Associate Professor of Mathematics
Adjunct Assistant Professor of Psychology
Clinical Assistant Professor of Physical Therapy
Lecturer in Teaching and Learning Specialties
OFFICERS OF INSTRUCTION

*CORRIGAN, DEAN C., D.Ed. (1969)  Professor of Teaching and Learning Specialties

COSEY, LINDA A., M.S. (1974)  Assistant Professor of Technical Nursing

COTE, LUCIEN M., B.S. (1969)  Clinical Instructor of Medical Technology

COVER, JENNIFER A., M.S. (1972)  Assistant Professor of Communication & Theatre

COVEY, WILTON W., M.D. (1966)  Clinical Instructor of Psychiatry

*CRAIGHEAD, JOHN E., M.D. (1968)  Professor of Pathology

*CRICHFIELD, GRANT, Ph.D. (1968)  Associate Professor of Romance Languages

CRONIN, MARY J., M.S. (1970)  Associate Professor of Professional Nursing

CROSS, HAROLD D., M.D. (1971)  Clinical Associate Professor of Medicine

CROSS, JAMES M., B.S. (1964)  Instructor in Physical Education

CROSS, ROBERT M., M.D. (1972)  Clinical Instructor of Medicine

*CROWELL, ALBERT D., Ph.D. (1955)  Professor of Physics

CUMMINGS, LINDA L., B.S. (1975)  Clinical Instructor in Radiologic Technology

CUNNINGHAM, DANIEL J. (1972)  Adjunct Instructor in Radiologic Technology

CUSACK, CAROL A., M.S.N. (1975)  Clinical Instructor in Professional Nursing

CUTRONEO, RENNETH R., Ph.D. (1976)  Associate Professor of Biochemistry

CZERNIAWSKI, FLORENCE, B.A. (1967)  Instructor in Medical Technology

DAHL, ELIZABETH T., B.Mus. (1960)  Professor of Music

DAMKOT, DAVID K., Ph.D. (1973)  Professor of History

DANFORTH, ELLIOT, M.D. (1970)  Clinical Associate Professor of Psychiatry

*CRAIGHEAD, JOHN E., M.D. (1968)  Assistant Professor of Pathology

*CUMMINGS, LINDA L., B.S. (1975)  Associate Professor of Professional Nursing

*DAVIS, GEORGE B., M.D.C.M. (1972)  Clinical Instructor in Medicine

DAVIS, GERALD S., M.D. (1971)  Assistant Professor of Medicine

DAVIS, JOHN H., M.D. (1968)  Professor of Surgery

DAVIS, LAYTON W., B.S. (1973)  Instructor in Music

DAVIS, PHILIP H., M.D. (1958)  Clinical Associate Professor of Pathology

DAVIS, ROBERT E., M.D. (1968)  Clinical Associate Professor of Obstetrics & Gynecology

*DAVISON, JEAN M., Ph.D. (1955)  Lyman — Roberts Professor of Classical Languages and Literature

*DAVISON, JOHN A., Ph.D. (1967)  Professor of History

DAVISON, ROBERT P., M.E. (1935)  Adjunct Professor of Zoology

DAVISON, WILLIAM E., M.F.A. (1967)  Associate Professor of Art

DAWSON, ROBERT F., Ph.D. (1969)  Professor of Civil Engineering and Computer Science

DEANE, ROBERT S., Bch. (1967)  Associate Professor of Anesthesiology

DEANE, WILLIAM N., Ph.D. (1976)  Clinical Assistant Professor of Psychiatry

DEANGELIS, BARBARA, B.A. (1972)  Clinical Assistant Professor of Physical Therapy

DECK, EDITH F., M.S. (1969)  Associate Professor of Professional Nursing

*DELLIN, LUBOMIR A., J.S.D. (1957)  Professor of Economics and Political Science

DEMATTEO, BARBARA B., B.S. (1975)  Lecturer in Physical Therapy

DEMERS, LOUISE A., M.S. (1960)  Associate Professor of Professional Nursing

DEMEULES, JAMES E., M.D. (1972)  Assistant Professor of Surgery

DEMING, MARY B., Ph.D. (1974)  Assistant Professor of Sociology

DEMING, RICHARD L., Ph.D. (1974)  Visiting Assistant Professor of Chemistry

DEMPESEY, WILLIAM, JR., M.D. (1976)  Assistant Professor of Surgery

DENNISON, W. LANDON, JR., M.D. (1970)  Clinical Assistant Professor of Dermatology

DENTE, GINO A., M.D. (1950)  Professor of Anesthesiology

*DETENBECK, ROBERT W., Ph.D. (1967)  Professor of Physics

DICKERMAN, JOSEPH D., M.D. (1972)  Associate Professor of Pediatrics

*DICKERSON, ALBERT I., JR., Ph.D. (1966)  Assistant Professor of English

DICKERSON, MARY J., M.A. (1973)  Lecturer in English

DIETRICH, PETER A., M.D. (1971)  Assistant Professor of Radiology

DIELKE, RAYMOND G., M.A. (1965)  Lecturer in Communication & Theatre

DIETZEL, CLEASON S., Ph.D. (1967)  Assistant Professor of Counseling

DILLINGHAM, MARSHALL, M.D. (1976)  Lecturer in Physical Therapy
DIONNE, VINCENT E., Ph.D. (1975)  Assistant Professor of Physiology & Biophysics
DODGE, CARROLL W., Ph.D. (1970)  Visiting Professor of Botany
DOES, RICHARD B., Ph.D. (1969)  Adjunct Assistant Professor of Psychology
DONAGHY, RAYMOND M., M.D. (1946)  Professor of Neurosurgery
DONNELLY, JOHN R., Ph.D. (1969)  Associate Professor of Forestry
*DOOLAN, BARRY L., Ph.D. (1970)  Assistant Professor of Geology
DOREMUS, HENRY M., D.V.M. (1960)  Associate Professor of Pharmacology and Animal Pathology
DORSAM, ANNE M., M.M. (1972)  Instructor in Music
*DOOLAN, BARRY L., Ph.D. (1970)  Adjunct Assistant Professor in Mathematics
*DOOLAN, BARRY L., Ph.D. (1970)  Professor of Animal Sciences
*DOWNER, RICHARD N., Ph.D. (1967)  Associate Professor of Civil Engineering
*DRAKE, JOHNC., Ph.D. (1970)  Associate Professor of Geology
DUCHACEK, HOWARD, M.E. (1949)  Associate Professor of Mechanical Engineering
*DUCHARME, EDWARD R., Ed.D. (1973)  Professor of Teaching and Learning Specialties
DUNHAM, CHARLES R., M.S. (1967)  Lecturer in Civil Engineering
DUNKLEY, THOMAS C., M.Ed. (1966)  Assistant Professor of Physical Education
DUNN, MICHAEL J., M.D. (1969)  Associate Professor of Medicine
DURFEE, HERBERT A., JR., M.D. (1957)  Professor of Obstetrics & Gynecology
*DUTCHIE, ALEXANDER H., Ph.D. (1964)  Associate Professor of Mathematics
DWORK, JULIUS S., Ph.D. (1954)  Adjunct Associate Professor of Agricultural and Resource Economics
EDDIE, DWIGHT K., M.E.E. (1955)  Assistant Professor of English
EDWARDS, MARGARET F., Ph.D. (1971)  Lecturer in Special Education
ELLERSON, R. DAVID, M.D. (1970)  Clinical Assistant Professor of Psychiatry
ELLISON, RICHARD A., M.D. (1975)  Visiting Assistant Professor of Zoology
ELVIN, DAVID W., Ph.D. (1975)  Instructor in Institutional Administration
EMANUEL, FRANK S., B.S. (1968)  Assistant Professor of Clothing and Textiles
EMANUEL, SLYVIA J., M.S. (1966)  Associate Professor of Professional Nursing
EMERY, E. STANLEY, III, M.D. (1970)  Assistant Professor of Pediatrics
ENGROFF, JOHN W., Ph.D. (1972)  Instructor in Teaching and Learning Specialties and History
*ERB, CLINTON A., Ph.D. (1971)  Associate Professor of Teaching and Learning Specialties
ERDMANN, ROBERT H., L.L.B. (1967)  Instructor in Business Administration
*ESCHHOLZ, PAUL A., Ph.D. (1969)  Associate Professor of English
*ETHERTON, BUD, Ph.D. (1968)  Associate Professor of Botany
*EVERING, FREDERICK, JR., Ph.D. (1965)  Professor of Electrical Engineering
*EVERT, DEAN R., Ph.D. (1970)  Associate Professor of Plant & Soil Science
FAGAN, WILLIAM T., JR., M.D. (1954)  Associate Professor of Urology
FAIGEL, DAVID S., D.D.S. (1954)  Associate Professor of Dental Hygiene
FAIRBANK, JONATHAN T., M.D. (1976)  Assistant Professor of Radiology
FAIRBANKS, TOD R., M.S. (1973)  Clinical Instructor in Medical Technology
FALBY, JAMES B., B.S.R.T. (1971)  Lecturer in Radiologic Technology
FARNHAM, JOHN E., D.M.D. (1963)  Clinical Professor of Oral Surgery
FARRELL, SANDRA M., M.S. (1968)  Associate Professor of Dental Hygiene
FAI, DOUGLAS P., M.S. (1953)  Lecturer in Physical Education
FEIDNER, EDWARD J., M.F.A. (1971)  Associate Professor of Dental Hygiene
FEITELBERG, SAMUEL B., M.A. (1971)  Professor of Communication & Theatre
FERREIRA, CHARLES W., M.Ed. (1975)  Associate Professor of Physical Therapy and Rehabilitation Medicine
FELLINGER, WILLIAM L., Ph.D. (1975)  Assistant Professor of Computer Science
*FELT, JEREMY P., Ph.D. (1957)  Professor of History
FELT, KAYE, M.A. (1971)  Instructor in History
FENGELER, CHRISTIE K., Ph.D. (1970)  Assistant Professor of Art
FERREIRA, CARLES W., M.Ed. (1975)  Assistant Professor of Vocational Education and Technology
FERSING, STEN E., D.D.S. (1973)  Instructor in Dental Hygiene
FIFE, C. LYNN, Ph.D. (1966)  Associate Professor of Agricultural and Resource Economics
FIKE, DOROTHY, J., M.S. (1974)  Instructor in Medical Technology
*FINNEY, HENRY C., Ph.D. (1973)  Associate Professor of Sociology
FISCHL, JACQUELYN L., B.S. (1973)
FISHELL, KENNETH N., Ed.D. (1971)

GIBSON, KENNETH S., M.S. (1964)
GIBSON, THOMAS C., M.B.B.C. (1962)
OFFICERS OF INSTRUCTION

Associate Professor of Resource Economics and Recreation Management
Professor of Classics
Clinical Instructor in Medical Technology
Assistant Professor of Animal Sciences
Assistant Professor of Zoology
Clinical Assistant Professor of Professional Nursing; Technical Nursing; and Psychiatry
Assistant Professor of Pathology
Clinical Assistant Professor of Medicine
Professor of Physical Education
Adjunct Lecturer of Teaching and Learning Specialties
Associate Professor of Epidemiology and Environmental Health
Assistant Professor of Human Development
Associate Professor of Rehabilitation Medicine and Medicine
Associate Professor of Neurology
Assistant Professor of Psychology
Professor of Political Science
Assistant Professor of Political Science
Associate Professor of Medicine
Professor of Human Development
Clinical Assistant Professor of Obstetrics & Gynecology
Professor of Obstetrics & Gynecology
Assistant Professor of Technical Nursing
Professor of Medicine
Pomeroy Professor of Chemistry
Professor of Business Administration
Assistant Professor of Physical Education
Adjunct Assistant Professor of Organizational and Human Resource Development
Assistant Professor of Teaching and Learning Specialties
Instructor in English
Instructor in Dental Hygiene
Instructor in Teaching and Learning Specialties
Lecturer in Physical Education
Clinical Associate Professor of Ophthalmology
Assistant Professor of Communication and Theatre
Associate Professor of Medicine
Assistant Professor of Medical Microbiology
Associate Professor of Medicine
Assistant Professor of Religion
Assistant Professor of English
Assistant Professor of Organizational and Human Resource Development
Associate Professor of Surgery
Assistant Professor of Dental Hygiene
Teaching Associate of Technical Nursing
Associate Professor of English
Professor of Philosophy
Lecturer in Physiology & Biophysics
Lecturer in Computer Science
Assistant Professor of Physiology & Biophysics
Clinical Instructor in Medicine
Clinical Associate Professor of Professional Nursing
Professor of History
Professor of Electrical Engineering

KITCHER, PHILIP S., Ph.D. (1974)

KITTTEL, WILLIAM C., L.L.B. (1973)

KLECZEK, RHONDA S., B.S. (1975)

Teaching Associate of Microbiology and Biochemistry
Assistant Professor of Business Administration
Associate Professor of History
Professor of Botany
Clinical Associate Professor of Psychiatry
Assistant Professor of Dental Hygiene
Clinical Associate Professor of Ophthalmology
Clinical Instructor in Medical Technology
Instructor in Biochemistry
Assistant Professor of Psychiatry
Professor of Mathematics
Assistant Professor of Radiologic Physics
Assistant Professor of History
Instructor in Professional Nursing
Professor of Pharmacology
Assistant Professor of Microbiology
Assistant Professor of Human Development
Adjunct Assistant Professor of Teaching and Learning Specialties
Clinical Assistant Professor of Psychiatry
Professor of Radiology
Professor of Art
Assistant Professor of Occupational and Extension Education
Lecturer in Physical Therapy
Professor of Psychology
Professor of Natural Resources and Forestry
Associate Professor of Orthopaedic Surgery
Instructor in English
Assistant Professor of Radiology
Professor of Microbiology and Biochemistry
Professor of Medical Microbiology
Professor of English
Clinical Instructor in Medicine
Instructor in Dental Hygiene
Professor of Physics
Associate Professor of Romance Languages
Professor of German
Clinical Instructor in Physical Therapy
Lecturer in Computer Science
Associate Professor of Pathology
Associate Professor of Psychology
Instructor in Music
Visiting Instructor in Chemistry
Associate Professor of Gastroenterology
Assistant Professor of Zoology
Associate Professor of Medicine
Assistant Professor of Surgery
Clinical Associate Professor of Professional Nursing and Technical Nursing
Associate Professor of Vocational Education and Technology
Assistant Professor of Psychology
Assistant Professor of Psychology
Clinical Associate Professor of Medicine
Assistant Professor of Zoology
Associate Professor of Political Science
Associate Professor of Music
Adjunct Assistant Professor of Vocational Education and Technology
Assistant Professor of Philosophy
Assistant Professor of Philosophy
Instructor in Business Administration
Clinical Instructor in Physical Therapy
KLEH, THOMAS R., M.D. (1965)  Clinical Assistant Professor of Ophthalmology
KLEIN, DEBRA C., M.S.S.W. (1975)  Instructor in Organizational and Human Resource Development
KLEIN, HARVEY J., M.D. (1975)  Clinical Assistant Professor of Psychiatry
• KLEIN, RICHARD M., Ph.D. (1967)  Professor of Botany
KNAPP, KATHRYN D., B.S. (1975)  Clinical Instructor in Physical Therapy
KIGHT, MARTHA F., M.Ed. (1970)  Lecturer in Special Education
KIGHT, STEPHEN C., M.S. (1973)  Adjunct Associate Professor of Civil Engineering
KNOWLES, ESTHER L., M.S. (1945)  Associate Professor of Housing and Residential Environment

KOPLEWITZ, MARTIN J., M.D. (1973)  Associate Professor of Surgery
• KORSON, ROY, M.D. (1951)  Professor of Pathology
KOST, LARRY L., M.S. (1973)  Instructor in Mathematics
KNAPP, KATHRYN D., B.S. (1975)  Professor of Medicine
KNIGHT, STEPHEN C., M.S. (1973)  Professor of Chemistry

• KZIAN, JOHN E., Ph.D. (1962)  Associate Professor of Medicine
• KRUPP, PATRICIA, Ph.D. (1972)  Assistant Professor of Anatomy
KRUSINSKI, PAUL A., M.D. (1974)  Adjunct Associate Professor of Extension

• KUHLMANN, RAYMOND F., M.D. (1948)  Clinical Professor of Orthopaedic Surgery
KULCZYCKI, JOHN J., Ph.D. (1976)  Lecturer in History
KUNIN, ARTHUR S., M.D. (1964)  Associate Professor of Medicine
KUSIAK, EDWARD T., M.Ed. (1969)  Instructor in Biochemistry

KUPIC, EDWARD A., M.D. (1966)  Associate Professor of Radiology
KUSIAK, EDWARD T., M.Ed. (1969)  Lecturer in Physical Education
LABER, GENE E., Ph.D. (1968)  Associate Professor of Business Administration
LACASSE, IRIS I. (1971)  Adjunct Instructor in Radiologic Technology
LACASSE, LLOYD F., M.S. (1969)  Lecturer in Physical Education
• LACHAPELLE, RENE C., Ph.D. (1974)  Associate Professor of Medical Technology
LAFIANDRA, ROBERT P., M.D. (1972)  Clinical Instructor in Medicine

• LAIL, DAVID C., Eng.D. (1965)  Professor of Electrical Engineering
• LAIBLE, JEFFREY P., Ph.D. (1974)  Assistant Professor of Civil Engineering
LALUMIERE, DONNA J., B.S. (1973)  Teaching Associate in Professional Nursing
LAMBERT, LLOYD M., JR., Ph.D. (1963)  Professor of Electrical Engineering
LAMBERT, DENIS E., M.A.T. (1964)  Assistant Professor of Physical Education
• LAMDEN, MERTON P., Ph.D. (1947)  Professor of Biochemistry
LAMORAY, ADA R. (1972)  Lecturer in Dental Hygiene
LAMPE, ALBERT M., Ed.D. (1974)  Assistant Professor of Occupational and Extension Education

LAND, MARSHALL L., JR., M.D. (1973)  Clinical Instructor in Pediatrics
• LANDESMAN, RICHARD H., Ph.D. (1969)  Associate Professor of Zoology
• LANG, HELENE W., Ed.D. (1967)  Associate Professor of Teaching and Learning Specialties
LANGE, JANICE L., M.S. (1967)  Lecturer in Physical Education
LANTMAN, JOHN C., M.D. (1957)  Clinical Associate Professor of Medicine and Family Practice

LAQUEUR, H. PETER, M.D. (1968)  Clinical Associate Professor of Psychiatry
• LARSON, ROBERT B., Ed.D. (1968)  Associate Professor of Organizational and Human Resource Development
LATHROP, FRANK D., M.D. (1970)  Associate Professor of Otolaryngology
LAWLER, MARGARET E., M.A.T. (1969)  Lecturer in Clothing
LAWLER, JOHN C., M.S. (1974)  Instructor in Mathematics
LAWLOR, PETER P., M.D. (1971)  Clinical Instructor in Ophthalmology
LAWRENCE, PETER, D.D.S. (1968)  Instructor in Dental Hygiene

• LAWSON, ROBERT B., Ph.D. (1966)  Professor of Psychology
LAWTON, MARY BETH, M.S. (1974)  Lecturer in Early Childhood
LEABETTER, GUY W., JR., M.D. (1967)  Professor of Urology
LEAKE, WOODROW W., JR., Ph.D. (1975)  Assistant Professor of Communication & Theatre
LEAMY, WILLIAM P., M.S. (1943)

LEDIE, DAVID B., Ph.D. (1975)

LEEAN, CONSTANCE L., Ph.D. (1974)

LEFEVRE, KAREN B., M.A. (1975)

Associate Professor of Philosophy
Assistant Professor of Obstetrics & Gynecology and Professional Nursing
Lecturer in Radiologic Technology
Clinical Assistant Professor of Psychiatry
Clinical Instructor in Psychiatry
Associate Professor of Mechanical Engineering
Clinical Assistant Professor of Medicine
Associate Professor of Religion
Professor of Neurology
Professor of Mechanical Engineering
Clinical Instructor in Medicine and Psychiatry
Visiting Professor of Pharmacology
Clinical Assistant Professor of Medicine
Clinical Assistant Professor of Obstetrics and Gynecology
Professor of Anesthesiology
Associate Professor of Psychiatry
Assistant Professor of Sociology
Lecturer in Teaching and Learning Specialties
Associate Professor of Forestry
Associate Professor of Pharmacology
Adjunct Associate Professor of Extension
Clinical Professor of Medicine
Professor of Physiology and Biophysics
Clinical Assistant Professor of Obstetrics and Gynecology
Lecturer in Teaching and Learning Specialties
Assistant Professor of Surgery
Associate Professor of Otolaryngology
Clinical Assistant Professor of Psychiatry
Instructor in Anthropology
Assistant Professor of Geography
Assistant Professor of Social Welfare
Professor of Pediatrics
Clinical Associate Professor of Pediatrics
Instructor in Neurology
Professor of Psychiatry
Professor of Special Education
Assistant Professor of Psychology
Professor of Mechanical Engineering
Clinical Instructor in Obstetrics and Gynecology
Clinical Assistant Professor of Surgery
Associate Professor of Obstetrics and Gynecology
Clinical Instructor in Pathology
Associate Professor of Obstetrics and Gynecology
Associate Professor of Geography
Professor of Pediatric Surgery
Professor of Biochemistry
Adjunct Associate Professor of Animal Sciences
Instructor in Dental Hygiene
Adjunct Associate Professor of Human Nutrition and Foods
Professor of Mathematics
Instructor in Music
Professor of History
Associate Professor of Biochemistry
Associate Professor of Teaching and Learning Specialties

**OFFICERS OF INSTRUCTION**

Associate Professor of Business Administration
Professor of German
Professor of Geography
Clinical Assistant Professor of Neurology
Professor of Rehabilitation Medicine
Assistant Professor of Epidemiology
and Environmental Health
Clinical Assistant Professor of Family Practice
Associate Professor of Thoracic
and Cardiac Surgery
Instructor in Home Economics Education
Assistant Research Professor of Teaching and Learning Specialties
Assistant Professor of Philosophy
Professor of Professional Nursing
Clinical Assistant Professor of Medicine
Associate Professor of Radiology
Associate Professor of Electrical Engineering
Assistant Professor of Organizational and Human Resource Development
Associate Professor of Anthropology
Assistant Professor of Medical Microbiology
Associate Professor of Medical Microbiology
Assistant Professor of Physical Therapy
Assistant Professor of Orthopaedic Surgery
Clinical Assistant Professor of Medicine
Clinical Instructor in Physical Therapy
Assistant Professor of Dental Hygiene
Assistant Professor of Organizational and Human Resource Development
Adjunct Assistant Professor of Agricultural Engineering
Assistant Professor of Orthopaedic Surgery
Instructor in Mathematics
Associate Professor of Anesthesiology
Assistant Professor of Teaching and Learning Specialties
Assistant Professor of Urology
Adjunct Professor of History
Professor of Otolaryngology
Lecturer in Environmental Programs
Professor of Mathematics
Instructor in Neurology
Clinical Associate Professor of Medicine
Adjunct Assistant Professor of Organizational and Human Resource Development
Professor of History
Assistant Professor of Romance Languages
Clinical Assistant Professor of Obstetrics and Gynecology
Associate Professor of Professional Nursing
Clinical Associate Professor of Pediatrics
Associate Professor of Animal Pathology
Associate Professor of Psychology
John H. Converse Professor of Commerce and Economics
Lecturer in Teaching and Learning Specialties
Clinical Instructor in Physical Therapy
Associate Professor of Russian
Clinical Associate Professor of Pediatrics

WEIGER, JOHN G., Ph.D. (1964)  Professor of Romance Languages
WEINER, SHELDON, M.D. (1970)  Professor of Psychiatry
WEINRICH, FRANCIS A., M.A. (1950)  Associate Professor of Music
WELCH, JAMES G., Ph.D. (1968)  Professor of Animal Sciences
WELLER, DAVID C., Ph.D. (1967)  Associate Professor of Agricultural Biochemistry
WELLS, JOSEPH, Ph.D. (1968)  Associate Professor of Anatomy
WELSH, GEORGE W., M.D. (1956)  Associate Professor of Medicine
WELTIN, EUGEN E., D.S. (1966)  Associate Professor of Chemistry
WERTHEIMER, ALAN P., Ph.D. (1973)  Associate Professor of Political Science
WESSELING, PIETER, Ph.D. (1967)  Associate Professor of Romance Languages
WESTPHAL, ROBERT G., M.D. (1971)  Associate Professor of Medicine
WHATLEY, JANET E., Ph.D. (1973)  Lecturer in Computer Science
WHIPKEY, RONALD M. (1975)  Lecturer in Plant and Soil Science
WHITCOMB, CLARENCE C., M.D. (1973)  Assistant Professor of Pathology
WHITEBOOK, SUSAN M., Ph.D. (1969)  Assistant Professor of Romance Languages
WHITEHEAD, LAWRENCE, Ph.D. (1976)  Assistant Professor of Epidemiology and Environmental Health
WHITMORE, ROY A., JR., M.F. (1958)  Professor of Forestry
WHITTLESEY, MARGARET B., M.S.W. (1964)  Associate Professor of Organizational and Human Resource Development
WICKER, WILLIAM E., A.B. (1976)  Adjunct Assistant Professor of Economics
WIGGANS, SAMUEL C., Ph.D. (1963)  Professor of Plant and Soil Science
WIGGINS, DAVID C., Ph.D. (1970)  Associate Professor of Music
WILLIAMS, RONALD W., Ph.D. (1970)  Assistant Professor of Special Education
WILLMUTH, LEWIS R., M.D. (1970)  Assistant Professor of Psychiatry
WILSON, MARY S., Ph.D. (1969)  Associate Professor of Communication and Theatre
WINKLER, MINDY J., M.S. (1975)  Assistant Professor of Epidemiology and Environmental Health
WITHERELL, LINDEN E., M.P.H. (1975)  Clinical Instructor in Pathology
WOELFEL, CHRIS G., Ph.D. (1968)  Adjunct Associate Professor of Medicine
WOLK, ARTHUR D., M.D. (1970)  Associate Professor of Plant and Soil Science
WOOD, GLEN M., Ph.D. (1950)  Lecturer in Teaching and Learning Specialties
WOOD, HAZEN F., M.Ed. (1975)  Assistant Professor of Pathology
WOODRUFF, RICHARD S., M.D. (1950)  Associate Professor of Psychiatry
WOODRUFF, WILLIAM A., L.M.C.C. (1962)  Associate Professor of Zoology
WOODS, CHARLES A., Ph.D. (1971)  Instructor in Teaching and Learning Specialties
WOODS, HAROLD D., M.E. (1969)  Professor of Biochemistry
WODOLASZCZAK, ROBERT C., Ph.D. (1961)  Associate Professor of Anthropology
WOOLFSON, ANNE E., M.A. (1975)  Instructor in Teaching and Learning Specialties
WOOLFSON, ANNE E., M.A. (1975)  Instructor in Religion
WOOLFSON, A. PETER, Ph.D. (1970)  Assistant Professor of Dental Hygiene
WOOLFSON, A. PETER, Ph.D. (1970)  Assistant Professor of Communication and Theatre
WOLGER, ROGER, M.Phil. (1976)  Assistant Professor of Botany
WOOTTON, DOROTHY J., M.S. (1973)  Assistant Professor of Communication and Theatre
WORLEY, IAN A., Ph.D. (1970)  Clinical Assistant Professor of Psychiatry
WRIGHT, ALICE L., M.D. (1971)  Professor of Mathematics
WRIGHT, ROBERT K., Ph.D. (1966)  Clinical Instructor in Pediatrics
WRIGHT, WILLIAM C., M.D. (1974)  Professor of Chemistry
WULFF, CLAUS A., Ph.D. (1965)  Clinical Instructor in Medical Technology
WYLLIE, JOAN M., M.S. (1972)  Assistant Professor of Communication and Theatre
YATES, JEROME W., M.D. (1974)  Assistant Professor of Religion
YORK, ROBERT T., M.S. (1975)  Associate Professor of Oncology
YOUNG, WILLIAM J., II, Ph.D. (1968)  Assistant Professor of Special Education
YOUNG, PAUL C., M.D. (1972)  Professor of Anatomy
ZARATE, ARMANDO E., Ph.D. (1970)  Associate Professor of Pediatrics

* Denotes full-time faculty.

**Associate Resource Economist**

**Assistant Animal Scientist**

**Assistant Plant Pathologist**

**Horticulturist**

**Cytogeneticist**

**Associate Editor**

**Plant Physiologist**

**Biochemist**

**Assistant Soil Scientist**

**Associate Editor**

**Associate Animal Pathologist**

**Associate in Dairy Manufacturing**

**Associate Entomologist**

**Biochemist**

**Agricultural Economist, Farm Management**

**Associate Microbiologist**

**Dairy Scientist**

**Agricultural Economist, Farm Management**

**Administrative Associate**

**Assistant Plant Pathologist and Mycologist**

**Assistant Editor**

**Agricultural Economist, Marketing**

**Animal Scientist**

**Agricultural Engineer**

**Horticulturist**

**Dairyman**

**Associate Agronomist**

**Assistant Ecologist**
EXTENSION SERVICE STAFF

ENGINEERING

OUTWATER, JOHN OGDEN, Sc.D.  
Mechanical Engineer

RELATED SERVICES STAFF

The Related Services Division renders various services in the fields of agriculture and home economics, such as inspection of feed, seeds, and fertilizer; analysis of soils, milk, and other agricultural products on request; diagnosis of diseases of plants, poultry and other livestock, and analyses for the Vermont Parimutuel Racing Commission.

DOWE, THOMAS W., Ph.D. (1957)  Dean and Director
BUCKLAND, HOLLIS E., B.S. (1951)  Seed Analyst
GIBSON, KENNETH S., M.S. (1964)  Extension Dairyman
PELLETIER, MARY P., B.S. (1967)  Assistant Chemist
SAWYER, HARRY L., Jr., B.S. (1953)  Associate Chemist
SMITH, ALBERT M., Ph.D. (1957)  Dairy Scientist
WADSWORTH, JAMES R., V.M.D. (1951)  Animal Pathologist
WETHERBEE, ROBERT T., M.S. (1953)  Chemist

Extension Service Staff

The Cooperative Extension Service is a cooperative undertaking of the State of Vermont, the University of Vermont and State Agricultural College, the United States Department of Agriculture, and the several counties of the State. It has a State staff, with headquarters at the University, and a staff of county extension agents in the University Extension Service Centers in each county. Its purpose is “to aid in diffusing among the people . . . useful and practical information on subjects relating to agriculture, home economics, resource development, community development and related subjects, and to encourage the application of the same.” It also brings general University educational information to the people of the State. Its programs are available to all the people of the State, including both adults and youth.

DOWE, THOMAS W., Ph.D. (1957)  Dean

### ACADEMIC CALENDAR

#### 1976-77

**Fall Semester**
- Registration: Aug. 30-31, Mon.-Tues.
- Classes begin: Sept. 1, Wed.
- Labor Day Holiday: Sept. 6, Mon.
- Enrollment: Nov. 15-19, Mon.-Fri.
- Thanksgiving Recess: Nov. 24-27, Wed.-Sat.
- Classes end: Dec. 10, Fri.
- Exams begin: Dec. 13, Mon.
- Exams end: Dec. 18, Sat.

**Spring Semester**
- Registration: Jan. 25, Tues.
- Classes begin: Jan. 26, Wed.
- Town Meeting Recess: Mar. 7, 8, Mon, Tues.
- Spring Recess begins: Apr. 4, Mon.
- Classes resume: Apr. 11, Mon.
- Honors Day: Apr. 20, Wed. (No classes after 3:00 p.m.)
- Enrollment: Apr. 25-29, Mon.-Fri.
- Classes end: May 12, Thurs.
- Exams begin: May 14, Sat.
- Exams end: May 20, Fri.
- Commencement: May 27-29, Fri.-Sun.

#### 1977-78

**Fall Semester**
- Registration: August 30-31, Tues.-Wed.
- Classes Begin: Sept. 1, Thurs.
- Labor Day: Sept. 5, Mon.
- Fall Recess: Oct. 24, Mon.
- Enrollment: Nov. 14-18, Mon.-Fri.
- Thanksgiving Break: Nov. 23-26, Wed.-Sat.
- Classes end: Dec. 13, Tues.
- Exams begin: Dec. 15, Thurs.
- Exams end: Dec. 21, Wed.

**Spring Semester**
- Registration: Jan. 17, Tues.
- Classes begin: Jan. 18, Wed.
- Town Meeting Recess: March 6, 7, Mon.-Tues.
- Spring Recess: March 27 — Apr. 1, Mon.-Sat.
- Enrollment: Apr. 17-21, Mon.-Fri.
- Honors Day: Apr. 19, Wed. (No classes after 3:00 p.m.)
- Classes end: May 5, Fri.
- Exams begin: May 8, Mon.
- Exams end: May 13, Sat.
- Commencement: May 19-21, Fri.-Sun.

For information regarding registration and courses for evening Division and Summer Session, see page 139.
