- Basic hygiene: cleaning, bathing, brushing, nail clipping.
- Ear care includes: hair removal, cleaning ears, medication application for ears.
- Feed and water
- Light exercise depends on their over all health and abilities
- Attentive care: massage, giving affection
- Potty trips.

60 minutes: \$40 to \$65

Puppy Care:

Customize visits include

We designed our program to give your puppy the training it needs to prepare it to interact with the larger world. Puppies need activities that provide the growing brain with sufficient sensory stimuli.

3 Step leash training process:

Step 1. Age 10 weeks we start sensory exposure. Leash training will give you a stress free avenue for your puppy to begin its introduction to the world. Leash training and sensory stimuli go hand and hand. Soft training techniques applied during this process. This process begins with trainer and puppy working together. 30 min to 60 min

Step 2. After step one process is complete. We begin step 2 after step one by exposing puppy to hustle and bustle of everyday life. "City walk" - includes: 15 min to 30 min depending on the puppy's abilities. The trainer and puppy work together.

Step 3. Now we train the owner. It is imperative to learn how to walk your puppy correctly. The owner and puppy will work with the trainer to learn how to walk together correctly. This is a comprehensive training program. **It's important you** call and schedule a free consultation on how this process works. 120 min in total \$200 Follow-up consultations included
