null
Fundamental Axioms of Natural

1. The law of identity: A thing is what it is.
2. The law of non-contradiction: A thing cannot be both.
3. The law of excluded middle: A thing is either.

These axioms form the basis of classical logic and are essential for understanding the structure of logical arguments.

In modern contexts, these axioms are often extended and applied in various fields such as mathematics, computer science, and philosophy.
