Carse Wetlands: Bibliography

Natural Areas Archival Collection

University of Vermont

Carse Wetlands was acquired in 2013 and became a Natural Area in 2014. The parcel to the north of the initial gift was conveyed to the University of Vermont by Elizabeth Hazen in 2019. Historically used for agriculture, the area contains wetlands, open water, forested hillsides, and limestone bluffs. The Vermont Electric Power Company (VELCO) cuts through the northwest corner of the property, and Vermont Gas Systems installed a pipeline along its western edge in 2016. The majority of documents relate to the process of acquisition, its designation of a Natural Area, and the installation of the gas pipeline. The main goal represented in the collection is creating a management plan.

The documents listed below are those which pertain to research undertaken in the Area. The documents are sorted by the location at which they can be accessed or found. Those housed in the Silver Special Collections, Howe Library, or otherwise are listed as such, and those held internally by the Natural Areas program are listed under the headings "Scholarworks" and "Internal Documents."

Not included in this list is a large volume of management material, such as correspondence, land use records, maps, news articles, and meeting minutes. If desired, please contact the Natural Areas Program for access to these documents.
