Pease Mountain: Bibliography

Natural Areas Archival Collection

University of Vermont

This list represents research relating to the University of Vermont's Pease Mountain Natural Area. Part of 11 total Areas, the pond has been in the University's possession since 1949. The mountain, the only upstanding feature in this area of the Champlain Valley, is home to several rare plants, such as wild comfrey, white bear sedge, Bicknell's cranesbill, and others. The main goal represented in the collection is the development of adequate trail systems and the creation of educational programs in conjunction with the Charlotte Central School.

The documents listed below are those which pertain to research undertaken in the Area. The documents are sorted by the location at which they can be accessed or found. Those housed in the Silver Special Collections, Howe Library, or otherwise are listed as such, and those held internally by the Natural Areas program are listed under the headings "Scholarworks" and "Internal Documents."

Not included in this list is a large volume of management material, such as correspondence, land use records, maps, news articles, and meeting minutes. If desired, please contact the Natural Areas Program for access to these documents.
