Detail Under Lift 2023

Depth of Till = 30"
 Water in bottom.

Former lift support towers abandoned except for concrete bases in ground. New lift towers under construction alternate irregularly with new. Pits 6' to 8' deep are excavated, the upper retaining bedrock removal, and a concrete square placed in the bottom about 1' high by 6' on an edge.

From the concrete square, steel reinforcements project vertically to hold future towers.

Lift on west operating to summit instead.
