

Polystichum braunii, McKenley Hollow 7/5/83

211-7

- ① diminutive plant on a boulder on the trail just below the intermittent hill
- ② normal plant with 4 fronds just below a ca. 12" DBH Sugar maple, less than 20' from ①
large
- ③ find 3 hemlocks in a row between trail & brook, and a large 30+ YB below them. The 4 frond-plant is just below the YB.

Probably, the population lies along the steep brook bank. A number of other fern spp are abundant: \$, Athelya, PA + Dmarg.

Trail to Haynes - Balsam col, elev. 3030'

Schedule:

Lv. trail base	3:00 PM
Ar. Col	3:53 PM
Ar. Balsam Mt.	4:14 PM
Lv. Balsam Mt.	4:45 PM
Ar trail base	6:12 PM.

Transect #32
3580
Lookout 3530

Transect #3590
Summit Balsam 3600 21-8

Soil maybe thicker on
the lee side of peaks
from ice movement

Lookout ledge; fir common above
Balsam less flat 3470 (SUB & VV)
5th ledge top 3450
1993

A few scattered 7" fir
enter, ca. 7", 3380
openings with dead Fir & PB

4th ledge top 3370

Trail becomes less steep 2600 e.p. 25
About this point, old bark road becomes foot path.
Trail crosses intermittent ravine 2490
blocked by PB blowdown betw '69 & '70 summers.

3rd ledge top 3340
Stumping evident

Transect #413
3340

Short level of trail on steep grade 2320

2nd ledge TOP 3250
BASE 3220

1st fragmented ledge;
rocky pitch on trail
TOP 3190

Landslide
bank on
brook
2470

Valley narrows; trail steepens 2190

dry spring 14
Transect #5, 3010

Transect #6115
Ash grove elevation 1980
on Alluvial deposits?

former bark road? (Yes)

Series of
ledges &
pitcher

Short flat 2870
before last
pitch

Transects #7, 7A
Large basswood, PB,
hemlock along trail.
