Opportunities to Engage in Research  
In the College of Medicine

TO: Class of 2020  
FROM: Renee Stapleton, M.D., Ph.D.  
        Associate Professor of Medicine  
        Pulmonary and Critical Care Medicine  
        University of Vermont College of Medicine  
        Renee.Stapleton@uvm.edu  

DATE: November 21, 2016  
RE: Opportunities to Engage in Research In the Larner College of Medicine  

❖ Information in this document applies to both the UVMLCOM Summer Research Fellowship and the CVRI (Cardiovascular Research Institute) Summer Research Fellowship  

❖ A pre-proposal form must be filled out and approved prior to writing a full proposal  

❖ A mentor is required  

❖ A Summer Research Award will be awarded for the 3 most meritorious projects and reports  

Research is an important component of the multiple missions of the College of Medicine. We encourage you to participate in the opportunities available during your medical training to engage in basic, clinical, and/or health policy-related research activities that are ongoing in the College.

How to start?  
Visit the Research link on the College of Medicine homepage. On the website, you will find departmental research web sites, programmatic web sites, links to the Research Protections Office, and a wide variety of information about the kind of research done in the College and at University of Vermont Medical Center. Based on what you see, you may want to contact one or several faculty members to find out if they would be willing to act as your mentor for a 7-week summer experience.

You can also find information on the CVRI Summer Research Fellowships at the following link:  
http://www.med.uvm.edu/cvri/career.

Your fellow students were also an important resource during an informational meeting on Summer Opportunities, which occurred on Friday, November 18, during the lunch hour, in Med Ed 200. Students and program directors illustrated the possibilities for your summer between your first and second year, including but not limited to the UVM COM Summer Research Fellowship. Please visit the Summer Opportunities section of the Student Affairs Lounge for resources from this session.

Also, you may drop by the Office of Medical Student Education to reference pre-proposal forms submitted by the current second-year students who participated in summer research activities following their first academic year. Final summary reports can be found on COMET, under the Lounge >>
Projects are expected to be “research”, defined as posing an hypothesis and performing a basic science or clinical “experiment” with data collection and analysis, to address the hypothesis and provide new insight and knowledge; in some cases we may accept more descriptive research such as observing a new area of medicine and/or biological science and carefully documenting features or characteristics, thereby providing important new insight into “what” something is. However, such projects will be given a lower priority and may not receive funding if we have a large number of proposals. Chart reviews of small numbers of patients from local data sets are rarely funded because their results are unlikely to be generalizable.

**How is this summer experience supported?**
There are a number of mechanisms available to provide financial support for summer research. Additional information can also be obtained through individual faculty and departments. Here is a listing of the types of support that are available:

1. Both the College of Medicine and the CVRI Summer Research Fellowships (Described in more detail at the end of this memo); these Fellowships are competitive and support students for a 7-week summer research project with stipends of up to $3000.
2. NIH-funded Grants may have support for summer experiences for medical students; the Training Grants at the College are listed on the [UVM COM Research website](#); here are some we know have support and you could enquire of any of the others if interested:
   a. Hemostasis & Thrombosis Training Grant – Contact Dr. Paula Tracy, Biochemistry Department
   b. Neuroscience Center - contract Dr. Rod Parsons or Dr. Cindy Forehand, ANNB Department
   c. Vermont Lung Center – contact Dr. Charles Irvin, Department of Medicine
   d. Vermont Center for Immunology and Infectious Disease - contact Dr. Ralph Budd, Department of Medicine
   e. Vermont Center on Behavior & Health – Dr. Stephen Higgins, Department of Psychiatry
   f. Cardiovascular Research Institute of Vermont – Dr. David Schneider, Department of Medicine
   g. Vermont Cancer Center – Dr. Gary Stein, Department of Biochemistry
3. There are opportunities in some [Departments of the College of Medicine](#) to support students for a summer and all departments have a ‘research liaison’ faculty member; however departmental opportunities for support are often limited and on a first come – first serve basis.
4. Arrangements with individual faculty; many individual College of Medicine faculty have access to extramural funding or departmental funds to support summer activities, and as mentioned above the web site is an excellent way to get started in reviewing the faculty’s interests.

**What are some key issues?**
No matter what the source of support or with whom you work, here are some key issues that need to be addressed:
1. Mentorship: having a mentor is a requirement. Having your mentor be a UVM College of Medicine faculty member is not a requirement BUT we strongly advise you do so; again,
proposals with extramural mentors and performance sites will receive a lower priority and may not be funded if there are a large number of proposals.

2. Human studies: If your research involves human subjects, the protocol to the Institutional Review Board (IRB) must already be in place. You must also complete the UVM on-line course concerning human subjects research. Ms. Gale Weld is a Research Review Administrator in the IRB and can be a resource for you in this area. The IRB web site (http://www.uvm.edu/~irb/) is also an excellent source of information. Ms. Kim Luebbers directs the Office of Clinical Trials Research and the Clinical Research Center (http://www.med.uvm.edu/octr/HP-DEPT.ASP?SiteAreaID=513), and can be a resource to you for help.

3. Animal studies: If your research involves animals, you will need to submit a protocol to the Institutional Animal Care and Use Committee (IACUC) and have it approved before you can begin your work. This needs to be done in consultation with your mentor. However, often you can be added to an existing protocol based on your mentor’s work. Ms. Penni Cross is a Research Review Administrator in the IACUC and can be a resource for you in this area. A certificate for completion of web-based training for working with animals is also a requirement and can be found on the Animal Resources Center web site (http://www.uvm.edu/~oacm/).

4. Timing: You will only have a maximum of 7 weeks available in the summer, so you and your mentor will need to make careful plans to fit in a productive project. It is important to start early!

5. Final Reports: All recipients of the COM Summer Research Fellowships are required to write a report summarizing their research findings; those with other funding sources are encouraged to provide written reports as well (see below). The final report should not exceed 2 pages (single-spaced), not including figures. Any difficulties encountered should also be addressed.

**Timeline**

<table>
<thead>
<tr>
<th>During 1st year:</th>
<th>Have discussions with faculty, identify a mentor and a potential project</th>
</tr>
</thead>
<tbody>
<tr>
<td>F, Nov 18:</td>
<td>Summer Opportunities Informational Session – hear about various opportunities available to you, and have questions answered</td>
</tr>
<tr>
<td>M, Feb 06:</td>
<td>Submit pre-proposal form (to Kiersten Hallquist in the Office of Medical Student Education)</td>
</tr>
<tr>
<td>F, Feb 24:</td>
<td>Project approval granted</td>
</tr>
<tr>
<td>M, Apr 03:</td>
<td>Submit final proposal</td>
</tr>
<tr>
<td>F, May 05:</td>
<td>Award notification if applying for COM Summer Research Fellowship</td>
</tr>
<tr>
<td>M, Sept 18:</td>
<td>Final Research reports are due</td>

</table>

**College of Medicine and CVRI Summer Research Fellowships:**

Summer Research Fellowships funded by the College provide **up to $3000** and are **7 weeks** in length. Support is available for these fellowships is awarded based on the relative merit of the proposals submitted. We will try to fund as many as possible. We require each applicant to ask their mentor to help with their support (see more below) and many of the training faculty members contribute their own research funds to these endeavors in order to make more fellowships available.
The CVRI funds 3 Summer Research Fellowships **up to $3000** each for research related to cardiovascular disease. The application process for these is the same as for the LCOM Summer Research Fellowships

Students wishing to compete for these funds must submit a pre-proposal form (attached) that includes student and mentor information as well as a **brief** description of the project and anticipated funding sources. We will be in touch with your proposed mentor to encourage financial support of your project.

Following approval of the pre-proposal, a full proposal will be required describing the project **not to exceed 5 double-spaced, type-written pages**. It is understood that the student requesting support will write his/her pre-proposal and proposal in collaboration with their chosen mentor. The proposal **must** contain:

- a cover page indicating the title of the proposal, and the name of your faculty mentor;
- a statement of Specific Aims including the hypotheses to be tested or objective of project (1 page);
- a brief background and significance section (1-2 pages);
- methods of procedure including the rationale for their choice (1-2 pages);
- future directions in which this project may lead (½-1 page); and
- a letter from your chosen mentor/sponsor indicating his/her willingness to mentor you in this endeavor as well as indicating what funds, if any, are available to support the various aspects of the project. He/she should specifically address whether funds are available to support ½ of the stipend.

Applications will be reviewed and awards made on a competitive basis. All final proposals must be submitted **by Monday April 3rd, 2017** to the Office of Medical Student Education (Given Courtyard N100).

**LCOM and CVRI First Year Summer Research Awards**

All recipients of the COM Summer Research Fellowship are required to submit a final report summarizing their research experience. **Three COM Awards will be given based on the merit of the project and the final report.** Recipients of the Award will receive $500 and recognition at their graduation. In addition, the recipients will be asked to present a brief summary of their experience in a research forum determined by the Associate Dean for Students and the Dean for Research. While students that obtain funding through other means are not required to submit a final report, **all those who wish to be eligible for the Summer Research Award will be required to submit a final report.**

The **CVRI also bestows one merit award each year** to the most meritorious cardiovascular research.
