___I___A___I___

M___R___S

Cattle feeds are typically divided into two types: roughages and concentrates. Roughages include hay, silage, straw, pasture, corn stalks and other crop residue. Roughages are high in fiber and typically lower in energy than concentrates. Concentrates include grains (corn, oats, etc.) and the by-products from processing other foods like wheat bran, distillers waste, etc. These feeds are high in energy and sometimes high in protein (soybean meal, cottonseed meal). Concentrates tend to be higher priced feeds than roughages.
