Farms. Factories. Everything in between. They're all **organizations**, or groups of people who work together for a common goal. For over a century, social-science researchers have tried to understand organizations to help them run better. In this workshop, you'll have a chance to think about your own experience in organizations as a way of getting introduced to the interesting world of **Industrial/Organizational Psychology**. You can prepare by thinking about an organization--anything really, other than your family, which is a different matter! Come up with one or two examples of situations where something didn't go as planned, where you are curious: could it have gone differently? We'll use these examples to look at various topics within the world of "I/O Psychology."

ABOUT OUR SPEAKER

Larry Rudiger has taught psychology for nearly 30 years. His focus is on teaching, and his research looks at ways to enhance learning in various settings and instructional designs. In addition, Larry brings his decade's experience in the private sector to bear on his course in organizational psychology and a winter-term course on how students can turn their degree in psychological science into a rewarding career. Larry also worked for a decade in medical software development, and is trained as a classical singer.

What is a Virtual Teen Science Café? It is a free, fun way for teens to explore science, engineering and technology with local scientists, engineers and technology experts. Teens will “meet a scientist”, learn about their work, and be able to participate in informal discussions.
