Nursery crop insurance is available in all counties for which a premium rate is provided in the actuarial documents to all persons operating nurseries that meet certain criteria. Insurance coverage applies, by practice (field-grown or container), to all of your nursery plants in a county and

- for which you have a share;
- are on the EPLPPS;
- are grown in a nursery that receives at least 40 percent of its gross income from the wholesale marketing of nursery plants;
- meet all the requirements for insurability; and
- are grown in an appropriate medium.

Nursery plants may not be insured if they:

- Are grown in containers containing two or more different genera, species, subspecies, varieties, or cultivars;
- Are grown and sold with the root system attached;
- Are grown as stock plants; or
- Are grown solely for harvest of buds, flowers, or greenery.

Plants producing edible fruits and nuts can be insured if the plants are available for sale. Harvesting the edible fruit or nuts does not affect insurability.

Your nursery must be inspected and approved as acceptable before insurance coverage can begin.

Causes of Loss
You are protected against the following:

- Adverse weather conditions, including wind, hurricane and freeze. If cold protection is required by the EPLPPS, adequate and operational cold protection measures must be in place;
- Failure of irrigation water supply, if due to an insurable cause of loss, such as drought;
- Fire, provided weeds and undergrowth are controlled; and
- Wildlife.

Rehabilitation Endorsement
This is an addition to the basic policy and provides reimbursement for your expenditures on labor and material for pruning and setup (righting, propping, and staking) of field-grown plants that are damaged by an insured cause of loss and have a reasonable expectation of recovery. The Rehabilitation Endorsement is not available with the catastrophic coverage level.
Whole Farm Policy

The Whole-Farm Revenue Protection program provides a risk management safety net for all commodities on the farm under one insurance policy. Farms can get WFRP with only one commodity or with multiple commodities. This insurance plan is tailored for any farm with up to $8.5 million in insured revenue, including farms with specialty or organic commodities (both crops and livestock), or those marketing to local, regional, farm-identity preserved, specialty, or direct markets, wholesale or retail. This program also allows certified organic producers to use organic prices.

Noninsured Crop Disaster Assistance Program (NAP)

This is a disaster assistance program that is administered by the Farm Service Agency (FSA) and it provides financial assistance to producers of non-insurable crops to protect against natural disasters that result in lower yields or crop losses. NAP provides disaster relief coverage based on the amount of loss that exceeds 50 percent of expected production.

Provisions for beginning farmers, traditionally underserved farmers, and farmers with limited resources

Eligible beginning farmers, traditionally underserved and those with limited resources can now receive increased assistance when they participate in USDA crop insurance programs. These new provisions exempt qualified farmers from paying the administrative fee for crop insurance policies. In certain instances, it provides them the ability to use the production history of farming operations in which they were previously involved with the decision making or physical activities. It also increases the premium subsidy rates for beginning.

Important Dates

Sales Closing/Cancellation........May 1  Insurance period begins........June 1

Where to get more information
