

Regulation for Young Children with Disabilities

TUESDAY, MAY 2 | 9am - 3:30pm
OKEMO RESORT, LUDLOW VT

Terms like self-regulation, behavior, sensory processing and emotional regulation come up often when discussing the needs and presentations of very young children with disabilities.

This training will de-mystify these concepts, with an emphasis on understanding sensory processing patterns.

Interventions will focus on concrete ways to support each child to develop skills and resilience, no matter the diagnosis.
