UVM Sustainability Information Accumulation Internship
Cyrus Oswald, Olivia Lopez, & Isabel Coppola
OVERVIEW

What: Internship focused on accumulating information about sustainability at UVM in order to create a centralized repository of information to increase accessibility and transparency.

Why: UVM community members are passionate about the environment and initiating innovative change-making projects, but we don’t currently make this information easily accessible.
01 Centralize Information
Collect existing data aggregated by the Office of Sustainability (OoS)

02 Upload Data
Upload synthesized data onto the OoS website in a more accessible format.

03 Compile data from other UVM Resources on campus such as; UVM Energy use, Student Projects, Internships, & Research

04 Outreach to Students
Contact students regarding their current projects and involvement on campus, etc. to help create new ideas for sustainability projects at UVM.
WHY DOES UVM NEED THIS?

UVM prides itself on striving to be among the nation’s premier small research institutions focused on several areas including the environment, but doesn’t clearly explain its efforts.

MARS

This lack of clarity leads to widespread misunderstanding of UVM’s sustainability “status”. This is particularly apparent when students seek to enact sustainability related visions.

COMMUNICATION

Although there is an incredible amount of important environmentally-related work happening on UVM’s campus, there is a severe deficit in the communication, publication and accessibility of such work.

UVM’S CREDIBILITY

UVM prides itself on striving to be among the nation’s premier small research institutions focused on several areas including the environment, but doesn’t clearly explain its efforts.
Thanks!
