

UVM Geography Department Speaker Series

2018-2019

This presentation examines a century of planning history in the city of Halifax, Nova Scotia. Focusing on a series of planning initiatives that sought to protect or improve human life, it shows how planning's conception of the human being relied on particular distinctions between the normative and the pathological, and how Black life – and, thus, Halifax's longstanding Black population – was continually placed outside planning's vision of human flourishing.

TED RUTLAND

Associate Professor

Dept. of Geography, Planning, & Environment, Concordia University
Distinguished Fulbright Chair of Quebec Studies, SUNY-Plattsburgh

WED. FEB. 20, 2019

2:20–3:10PM
