

Spring 2019

Geology Seminar Series

All seminars are Mondays at 4:15PM in Delehanty 219

02/11/2019: **Catherine Beck**, Department of Geoscience, Hamilton College, NY:
"Reconstructing the paleoenvironment in which hominins survived and thrived from West Turkana, Kenya"

03/04/2019: **Jess Barnes**, Astromaterials Research and Exploration Science, Johnson Space Center, NASA, TX:
"Apatite as a Tool for Unravelling the Origin and Evolution of the Moon"

04/01/2019: **Bastien Wild**, Andlinger Center for Energy and the Environment, Princeton University, NJ:
"The dissolution rates of silicate minerals from the laboratory to the field"

04/08/2019: **Adrian Bender**, Alaska Science Center, USGS, AK:
"Profound and ongoing landscape response to Pliocene-Pleistocene Yukon River capture: bedrock incision of the Fortymile River in eastern Alaska and western Yukon"

04/15/2019: **Justin Richardson**, Department of Geosciences, University of Massachusetts, MA:
"Deciphering geologic and anthropogenic toxic metals across New England"

04/29/2019: **Chris Marone**, Department of Geosciences, Pennsylvania State University, PA:
Earthscope: "The Mechanics of Slow Earthquakes and the Spectrum of Fault Slip Behaviors"

Sponsored by the Department of Geology Visiting Lecture Series
