Most of these beneficial insects prey on several pests and small caterpillars. Attracting them into your growing plots, they help reduce the need for chemical sprays. The adults are also important pollinators, consuming a variety of soft-bodied insects and nectar. Several beneficial insects provide attractive pollinator sites for insects, pollinating plants such as flowers, shrubs, and greenhouse vegetables.

**Beneficial Insect Visitors**

- Soldier Beetle Adult
- Lady Beetle Larva
- Syrphid/Maggot
- Syrphid Adult

**Habitat Plantings**

- Blue Cornflower
- Wild Cosmos
- Sweet Alyssum
- Plains Coreopsis
- Sunflower
- Zinnia
- Borage
- Indian Blanket
- Marigold

Several annual and native wildflowers that are attractive to pollination and shelter for beneficial insects, providing food sources and nurseries for home gardens. These plantings attract pollinators and beneficial insects, providing pest management benefits.
