

Amy Ivy is a retired regional vegetable specialist with Cornell Cooperative Extension's Eastern NY Commercial Horticulture Program. For the first half of her 31 years at Extension she coordinated the Master Gardener Volunteer Program in Essex and Clinton Counties, and for 10 years her focus was turned to vegetable and berry production. High tunnels are a keen interest of hers as a way for growers of any size to grow more in less space with fewer problems. She had conducted research on this approach for several years at Cornell's research farm in Willsboro. For the past few years she has been teaching the Botany and Annual and Perennials course for the UVM Extension Master Gardener Program, as well as provided various trainings for the program.
