NR 206: Environmental Problem-solving and Impact Assessment is taught by Matt Kolan and is the capstone course for all Rubenstein seniors. As part of this class, students engage in a semester-long project with a community partner. In the fall 2012 semester, the student group comprised of Federica Wade, Manny Eicholz, Alexandra Donaldson, Joe Smith, and Peter Farrell partnered with Rebecca Cushing, a graduate student charged with improving knowledge of and communications about the UVM Natural Areas. The NR 206 students visited seven of the nine Natural Areas — including East Woods, Colchester Bog, and Mount Mansfield — and took photographs that will populate an updated UVM Natural Areas website. The group also wrote brief visitor guides for each of the sites and created a Facebook Page for Centennial Woods, which is used and valued by many UVM students.
