

# The NW Climate Toolbox

## Beyond Big Climate Data

Kathie Dello, Oregon State University  
John Abatzoglou, University of Idaho  
Bart Nijssen, University of Washington  
Katherine Hegewisch, University of Idaho

# Translating climate data to usable information

## Underlying Goal

Improve *decision-makers'* ability and knowledge in incorporating climate information including past data, seasonal climate forecasts and climate projections to achieve productivity and sustainability.

# Building on Data + Tools

## Data

### Historical and real time

- UW gridded hydrologic output from VIC (snow, soil moisture)
- Gridded meteorological data of Abatzoglou (2013)

### Modeled data

- MACA/Integrated Scenarios archive

## Tools

- UW Drought Monitoring System
- West-Wide Drought Tracker
- Google Earth Engine Framework

# UW Hydrologic Monitor + WestWide Drought Tracker

Total Moisture Percentile  
2015-06-08

Pacific Northwest - PDSI  
May 2015

- High spatial resolution drought information
- Maps and timeseries, limited interaction capability

# White House Climate Data Initiative

Google

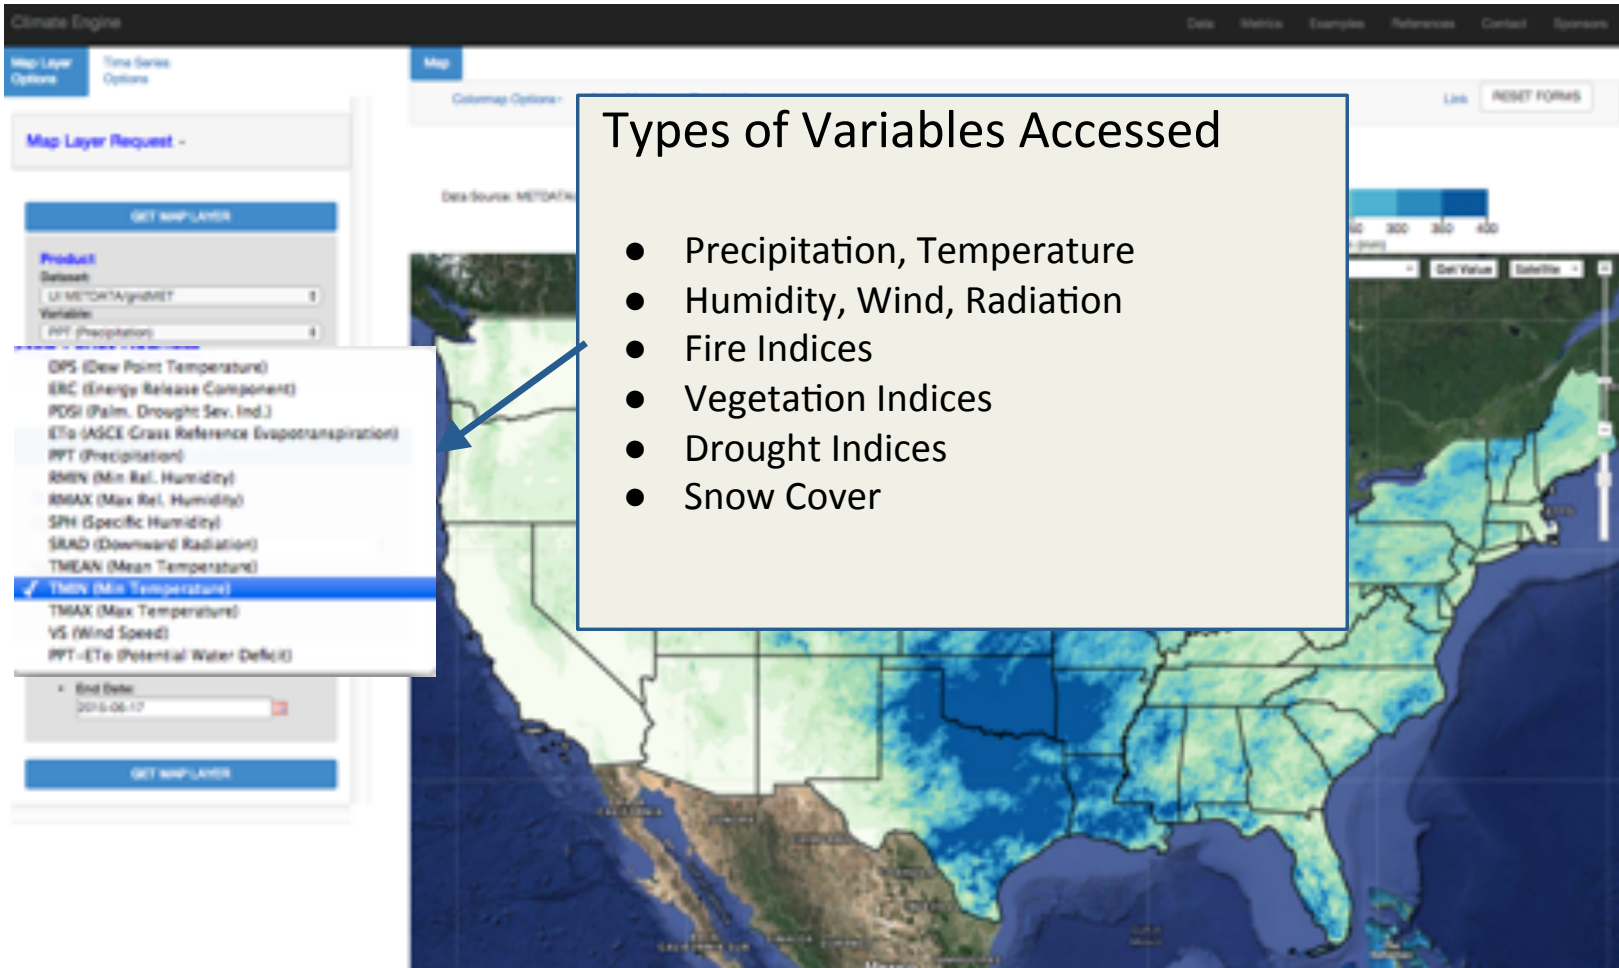

University  
of Idaho

- Brings together data and design to develop data-driven planning and resilience tools for local communities.
- US Gov't, Google, ESRI

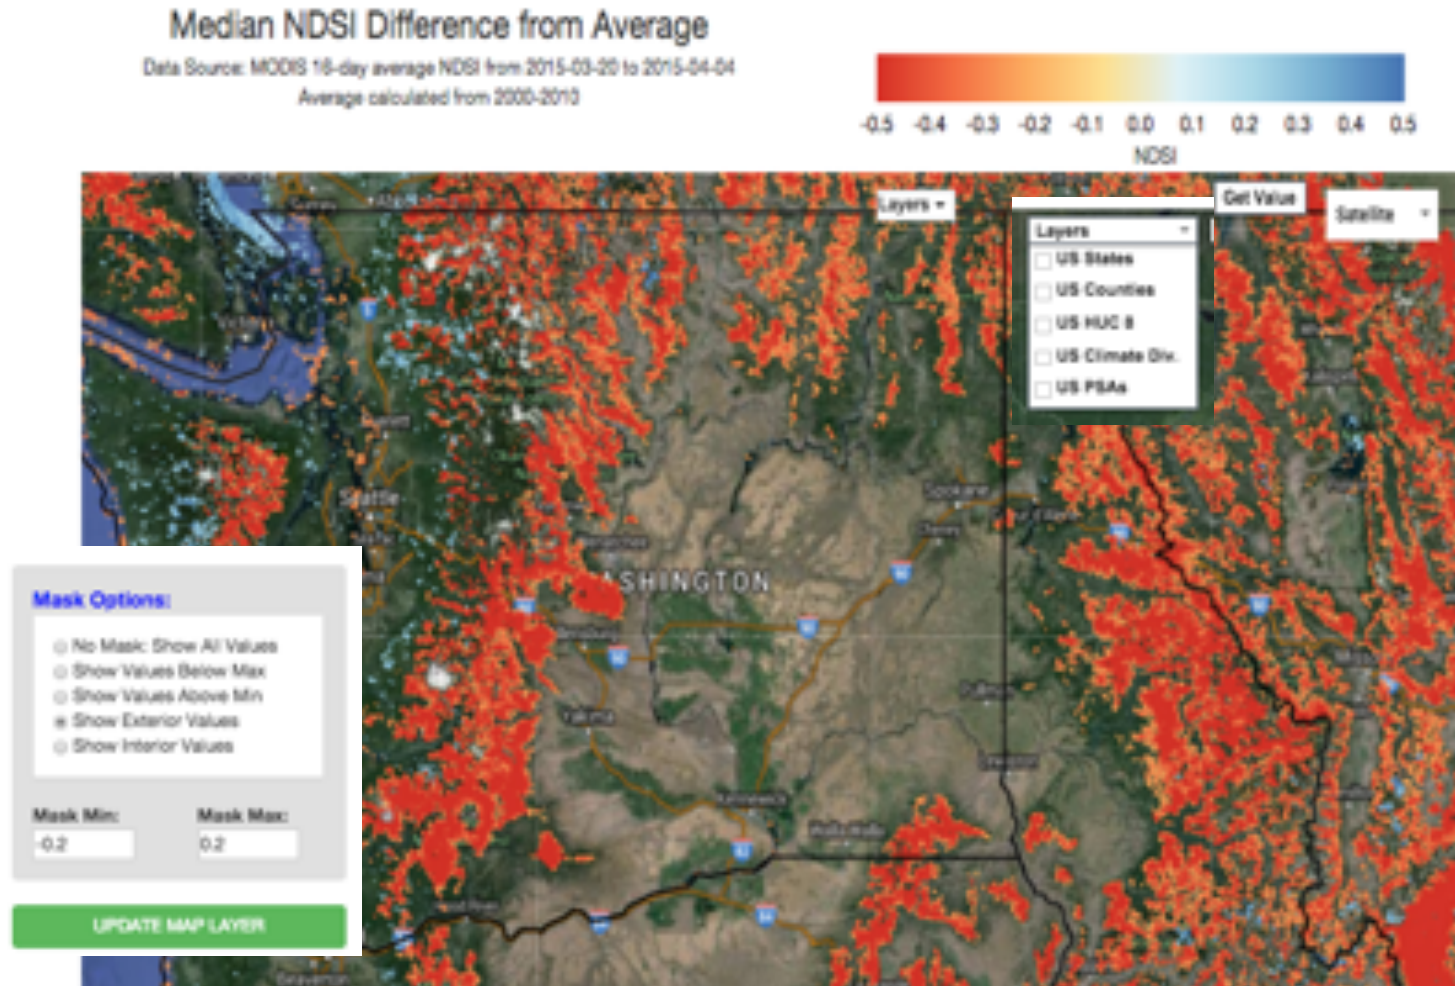

# Variables Accessed

# 2015 WA - Snowpack Drought

## 2015 Winter Snow Anomalies ~ April 1st

# 2015 WA - Vegetation Drought

## 2015 Summer Vegetation Dryness: ERC

Mean Energy Release Component  
Difference  
from Average

Data Source: METDATA/gridMET 4-km dataset (University of Idaho) from 2015-  
08-01 to 2015-08-31  
Average calculated from 1981-2010

# Customized Time Series Extraction

Dynamic graphics, csv output

# The confluence

# NW Agricultural Needs

## 1. Broad reaching derived climate information

- Growing degree days
- Irrigation demand
- Climate suitability

## 2. Targeted agricultural commodities

Needs assessment of agricultural sector through stakeholder interactions/growers meetings

thank you!

# Summary: NW Climate Toolbox Goals

- (1) Alleviate data/information accessibility barriers
- (2) Climate information that addresses NW needs on a range of timescales
- (3) Create dynamic decision support tools
- (4) Influence real world decision making in the NW

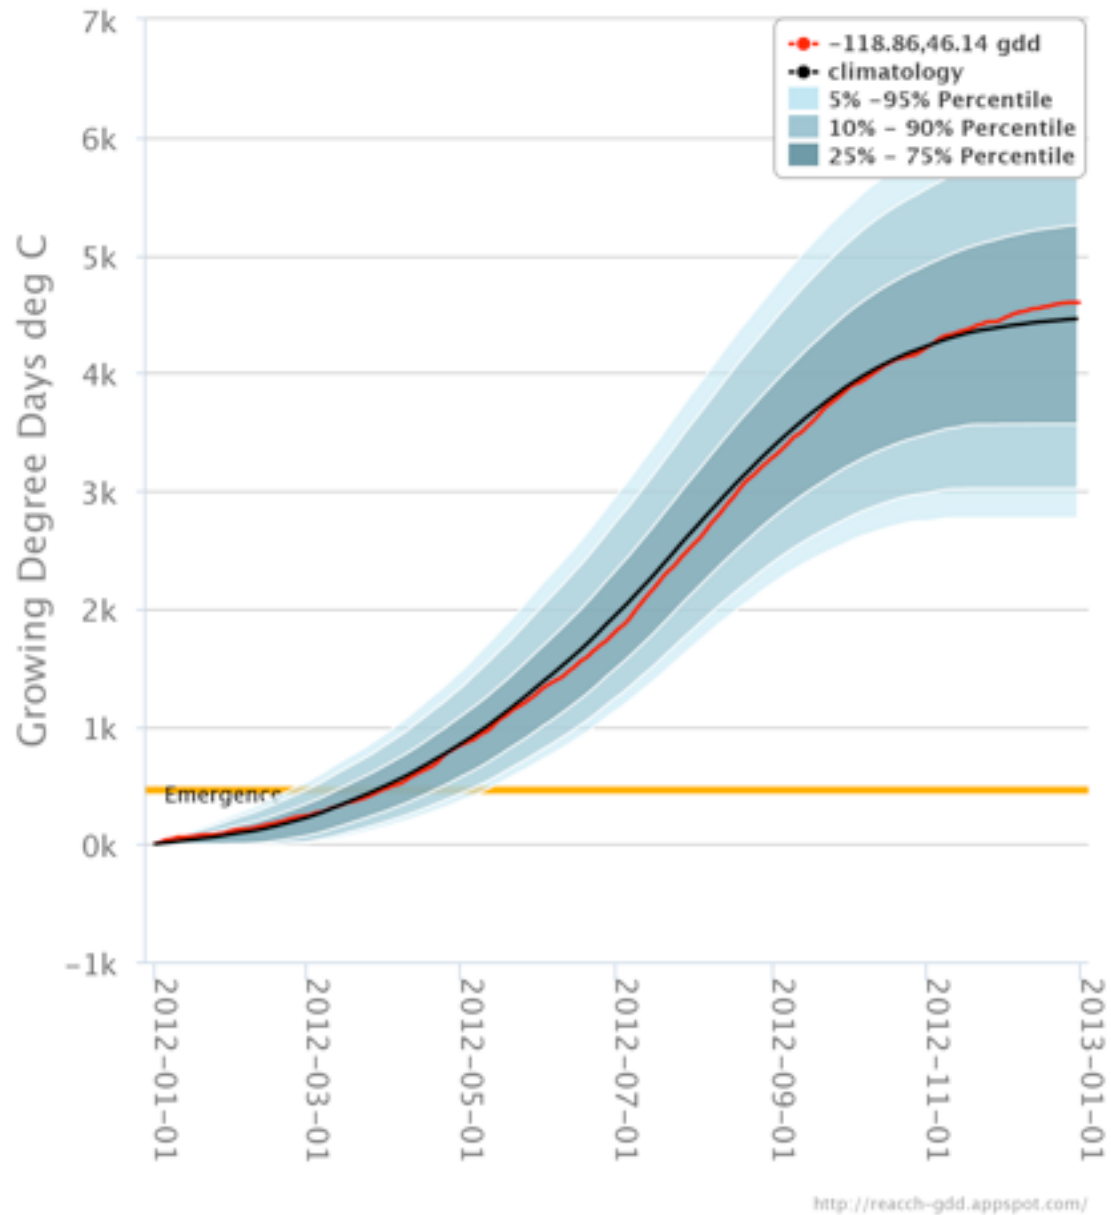

# Diverse agricultural commodities

Tri-State University Extension

## Daily Growing Degree Days

Data Source: METDATA/gridMET 4-km dataset (University of Idaho)

# Extras

# Climate Information and Decision-Making

Cohen and Waddell, 2008

# Summary

**Beta-beta version of this available**

<http://clim-engine-development.appspot.com/>

**So far:**

- User friendly interface
- Unprecedented access to large climate/remote sensing data
- Dynamic interface

**Possible Next steps (not supported):**

- Decision support tools for agriculture and wildfire
- User defined input region (e.g., polygons)
- Variety of output formats
- NMME outputs
- MACA climate projections
